7a Tetherdown, Muswell Hill, London N10 1ND

Waste and Recycling Statement

1. The waste generated by the operation of the restaurant at 7a Tetherdown is be sorted into the following two categories:
    - Recyclable waste; and
    - General waste.

2. Recyclable waste consists of the following waste sub-categories:
    - Paper;
    - Plastics;
    - Tins; and
    - Glass

3. Recycling waste is kept in strong plastic orange sacks and general waste in dark purple sacks provided by Veolia. These sacks will be tied closed to ensure no refuse can escape. Veolia collect both recycling and general waste from the site every day ensuring that no accumulation of waste can occur on the premise.

4. Once the refuse sacks are removed from the building, they are then placed in the waste storage area, represented by the green box shown on the site plan submitted in support of this application.

5. At the end of each day, immediately prior to their daily collection by Veolia, the refuse sacks are transferred from the waste storage area to the designated 'pick up point' at the front of the premises. The route between the waste storage area and the 'pick up point' is straight, level and measures less than 10 meters. It is also free of any obstacles such as steps.

6. The proposed refuse strategy is more than sufficient to deal with the refuse currently generated by existing operations and there are no plans to expand this restaurant in the near future.

7. This waste strategy ensures that no refuse is stored on the site overnight and makes adequate provision for the temporary storage of general and recyclable waste, prior to their daily collection by Veolia.
