Proposa Approval of details pursuant to conditions 8 (parking review plan - partial discharge of condition) attached to planning permission HGY/2013/1984

In accordance with the requirements set out within condition 8, the Parking Survey report supporting the application includes a Lambeth Methodology parking stress survey that repeats the methodology of previous surveys submitted with the original application. In accordance with scoping agreed with the Council's Transportation Team the survey has been extended to cover a time period from 2:30pm on a Saturday afternoon capturing the peak demand time for this day. The surveys indicate that the area suffers from approximately 65% parking stress on a Friday evening and approximately 68% across the survey period on the Saturday. This is significantly lower than the 85% threshold that would indicate extreme parking stress.

Given the above the highway and transportation authority does not wish to raise any

For Head of

objection to the discharge of condition 8 attached to planning permission HGY/2013/1984.
