Submission: Objection

Comments: The proposed position of the Telekom mast is a massive obstruction to our view and it ruins the local environment and our view to the city and Alexandra Park. Although it is in the neighbourhood of warehouses, they are not tall towers that would affect the view and we were aware of their presence when we bought our place.

We have worked extremely hard to be able to afford this flat and as I am sensitive to EMF I will not be able to live here anymore if this mast will be built here.

I know health reasons are not considered in the objection, however it is ignorant as radio frequencies might not affect most people but there are others who can become disabled because of it (just like not everyone is allergic to nuts but those who are could even die from one).

The council is liable for our health and safety and I will definitely take this case further if the planning will go ahead.

This mast is so extremely close to our windows(45 meters) that no human being would be willingly move here and have a huge white mast in their face when they look outside. This is inhuman. There are other alternatives that your team could surely consider that would not affect residents so greatly.

Please consider people's feeling as well, not only money.

Regards,

Agnes Pozsonyi
