

Correspondence with the planning department on the refuse collection strategy.

SJAM have issued informatino to refuse collection de-
partment and awaiting response.
It is deemed that access to the rear alley for refuse col-
lection and for access to bike store would pose a safety
risk to the residents and refuse collection workers.

Hi Steve,

From recollection the daily collection was reluctantly accepted as the best way. Check with the refuse team but I would say just to go for that.

Thanks

Sam

Subject: HGY/2020/2825 - No. 21-23 High Road, Wood Green N22 6BH - REFUSE & RECYCLING

Hi Sam

Hope you are well

We have recently been appointed to complete the technical design of the above application. I understand you were the case officer for HTA Design's approved planning application.

Soon, we will be preparing the information for submission for discharging prior to commencement conditions.

Having reviewed your officers report I understand there was no firm agreement on the refuse and recycling strategy - and that the internal store at the rear of the site was omitted from the latest revision of site / GF plan.

Having been to the site it can see that it is very unlikely that refuse and recycling would be collected from the rear of the site - the alley way is far too long a drag distance.

I assume the refuse strategy is to put refuse and recycling out onto the High Road pavement and it be collected on a daily basis - along with commercial waste.

I live 2 mins away and see there are daily collections along the High Road.

To ensure the refuse condition is discharged on first submission of information do you believe daily collection would be an acceptable strategy?

If useful, please copy in a member of LBH refuse and recycling team and / or provide me with their details so we can agree on a strategy in principle prior to planning condition submission.

I look forward to hearing from you.

Regards

steve J A Mills
