

Pittosporum trees – 7 Vallance Road, N22 7UD

T1 & T2 are non-native Pittosporum trees which can reach 30 metres in height. Permission is being sought to cut them down and remove the stumps.

T1 and T2 are only 1.35 metres away from a mature English hornbeam and are interfering with its crown and growth.

T1 and T2 were originally planted to act as a screening hedge but both have been allowed to grow and the larger of the two is now at least 9 metres high. They are both now providing excessive shade to the garden and are inhibiting an additional planting area being established.
