Subject: Dead Birch

Re 23 Cholmeley Park, Highgate N6

Please find attached a photo of the dead Birch tree in the rear garden of above. It had been ailing for some years and the recent hot, dry summers have finished it off. Honey fungus is evident around the base of the tree, so I'd like to remove (and stump grind) asap. Branches are now fragmenting and falling in breezy conditions. Please take this as a 5 day notification of intention to fell.

Kind regards

Robert Gibbs
