TG1 (5 x Cypress/Conifer) - Crown lift to approx. 9 meters

This group of trees make a significant contribution to the street scene, year round. The application is inadequate for a group of trees affecting the visual amenity of the area.

There is no tree report and the applicant cannot state whether they are cypresses or conifers, each of which require a different pruning approach. There is no photographic montage to show the effects of this drastic crown lifting and no plan to mitigate the loss of screening or the strange form the stand of trees will take.

We would ask the Tree Officer to approach the applicant with a view to maintaining the present crown level which is adequate to allow the free access of vehicles if needed. If the applicant does not respond positively, we would ask for a TPO to be put on these trees as a matter of urgency.
