

Noise Monitoring Note

A webmonitoring platform has been set up for noise monitoring by the noise and air quality consultants, Cass Allen, as shown by the screenshot below providing a plan view of the monitoring locations:

Location 1 and Location 2 in the image above also have dust monitoring units installed. Location 3 is noise only.

The consultants will provide Midgard with monitoring reports throughout the construction period.

These are typically provided on a monthly basis but can be increased or decreased in frequency as required, i.e. in the event of complaints or at the Local Planning Authorities request.

All of the monitoring units are on dedicated web platforms and can be made available to the London Borough of Haringey upon request.
