

## SCHEDULE (TEXT)

### 7. Identification Of Tree(s) And Description Of Works

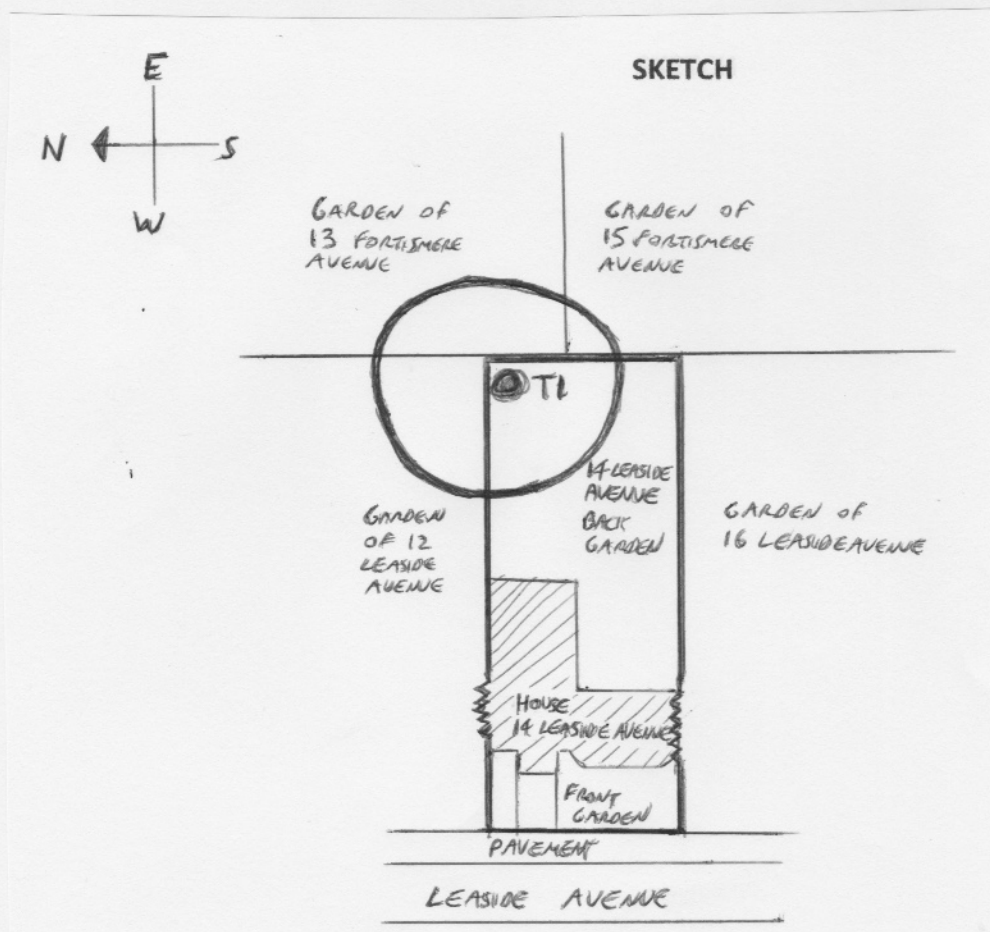

**T1 – Lime tree in rear garden:** The tree currently dominates a large part of 14 Leaside Avenue's rear garden and three other neighbouring rear gardens. The tree is circa 6m from ground to first fork, with overall current tree height of circa 12m, and with a canopy of circa 11m across the gardens of four houses.

**Description of intended works:** Crown lifting and pollard to first fork (excessive shading & avoidance of roots causing subsistence to house).

See sketch and photos of current situation (attached).

A previous notification was made on 1 August 2012 (which followed the Haringey Tree Officer Oliver Tong visiting the site on 29 June 2012 and providing guidance, which was followed, and the Applicant's then Surveyor and Tree Surgeon providing written evidence in support of the notification (see letters from John Soulsby (surveyor, dated 18 July 2012) and Keith Wyman (Tree Surgeon, dated 20 July 2012) attached)).

Arising from the notification in 2012 the tree was pollarded to the first fork (at circa 6m high) in the autumn of 2012. As predicted, the tree has recovered well and the current notification to Haringey Council seeks to lead to similar works being undertaken in, now, 2022/2023.
