T1. Broad leaved Lime (*Tilia platyphyllos*) Front garden Large mature dominant front garden tree previously reduced now encroaching on property and causing excessive shading. To improve light and maintain cyclical pruning schedule: Reduce canopy 1m beyond previous points of reduction (4-5m in height and 2-3m in lateral spread). Retain furnishing growth for crown continuity. Remove basal sucker growth

This is a very significant tree in the streetscape. The extent of the pruning needs to be subject to careful consideration. The tree survey recommends pruning back to previous points ie 4m and 2 metres. We would prefer to see this more limited pruning.

We are also concerned by the amount of ivy that we saw on the tree. Perhaps the Tree officer could assess best management practice and advise the applicant
