

SHELL HORNSEY PARK
93-113, PARK ROAD, LONDON, N8 8JN
DELIVERY MANAGEMENT PLAN

This plan should be read in conjunction with the Proposed Delivery and Service Plan prepared by Jennings Design Architecture (10019640 PLNG-06 2021 Rev F. This plan shows the tracking for the delivery van servicing the sales building and the oil tanker providing fuel for the site.

It is anticipated that the delivery van will enter the site three to four times a week and park in the dedicated delivery bay on the southern boundary of the site. Advance warning of delivery arrivals will be given by the delivery vehicle driver so the site is aware and to ensure this delivery parking area is clear as it should be.

It is anticipated that fuel deliveries will occur three times a week during the hours of operation. In respect of the oil tanker deliveries, which occupied Pump 2/3, in advance of arrival the oil tanker the driver will give warning and the site foreman will cone off Pump 2/3 to ensure that the oil tanker can access the site immediately on arrival without causing disruption to the highway. Once in position the tanker will not impact on the operation and traffic upon and through the site.

Refuse collection is undertaken by a private contractor (as per the existing arrangements) and refuse collection vehicles will utilise the delivery bay. These collections will be undertaken in coordination with the store manager.
