

10K Raster Mapping

Published 1999

Source map scale - 1:10,000

The historical maps shown were produced from the Ordnance Survey's 1:10,000 colour raster mapping. These maps are derived from Lincplan which replaced the old 1:10,000 maps originally published in 1970. The data is highly detailed showing buildings, roads, railways, water features and as well as the street names and road classifications. Boundary information, including the nearest county, unitary authority, district, civil parish and constituency.

10K Raster Mapping

Published 2007

Source map scale - 1:10,000

The historical maps shown were produced from the Ordnance Survey's 1:10,000 colour raster mapping. These maps are derived from Lincplan which replaced the old 1:10,000 maps originally published in 1970. The data is highly detailed showing buildings, roads, railways, water features as well as vegetation and land use. The maps are produced by the Ordnance Survey's digital data processing and are available in a variety of formats including vector, raster and print-ready formats. The data is available for use in a variety of applications including site analysis, planning and development.

London

Published 1985

Source map scale - 1:25,000

These maps were produced by the Russian military during the Cold War between 1960 and 1987, and cover 103 towns and cities throughout the UK. The maps are produced at 1:25,000, 1:50,000 and 1:100,000 scales, and show detailed land use, with coloured areas for urban, industrial, green, and water. Buildings are shown in black, and roads in red. The maps are produced with unobscured key describing their use. The maps are produced as well as strategic military areas and transport hubs, for use if they were to have invaded the UK. The detailed information provided indicates that the areas were surveyed using land-based personnel, on the ground, in the time that are mapped.

Index Map

For ease of identification, your site and buffer have been split into Slices, Segments and Quadrants. These are illustrated on the Index Map opposite and explained further below.

Site

Each site represents a 1:10,000 plot area (2.7km x 2.7km) for your site and buffer. A large site and buffer may be made up of several sites represented by a red outline, that are referenced by letters of the alphabet, starting from the bottom left corner of the site grid. This grid does not relate to National Grid lines but is designed to give best fit over the site and buffer.

Segment

A segment represents a 12,500 plot area. Segments that have plot files associated with them are shown in dark green, others in light blue. These are numbered from the bottom left hand corner within each site.

Quadrant

A quadrant is a quarter of a segment. These are labelled as NW, NE, SW, SE and are numbered in the order listed to allow reference to be quickly established. Therefore a feature that has a quadrant reference of A2NW will be in Slice A, Segment 2 and the NW Quadrant.

Introduction

The Environment Act 1995 has made site sensitivity a key issue, as the legislation pays as much attention to the pathways by which contamination could spread, and to the vulnerable targets of contamination, as it does the potential sources of contamination. For this reason, Landmark's Site Sensitivity maps and Datasheet(s) place great emphasis on statutory data provided by the Environment Agency and the Scottish Environment Protection Agency; it also incorporates data from Natural England (and the Scottish and Welsh equivalents) and Local Authorities; and highlights hydrogeological features required by environmental and geotechnical consultants. It does not include any information concerning past uses of land. The datasheet is produced by querying the Landmark database to a distance defined by the client from a site boundary provided by the client.

In the attached datasheet the National Grid References (NGRs) are rounded to the nearest 10m in accordance with Landmark's agreements with a number of Data Suppliers.

	Groundwater Vulnerability Geological Classification: Minor Aquifer (Variably permeable) - These can be fractured or potentially fractured rocks, which do not have a high primary permeability, or other formations of variable permeability including unconsolidated deposits. Although not producing large quantities of water for abstraction, they are important for local supplies and in supplying base flow to rivers Soil Classification: Soils of High Leaching Potential (U) - Soil information for restored mineral workings and urban areas is based on fewer observations than elsewhere. A worst case vulnerability classification (H) assumed, until proved otherwise Map Sheet: Sheet 40 Thames Estuary Scale: 1:100,000	A13SE (SE)	0	3	534035 191248

Map ID	Details	Quadrant Reference (Compass Direction)	Estimated Distance From Site	Contact	NGR
	Groundwater Vulnerability Geological Classification: Non Aquifer (Negligibly permeable) - Formations which are generally regarded as containing insignificant quantities of groundwater. However, groundwater flow through such rocks, although imperceptible, does take place and needs to be considered in assessing the risk associated with persistent pollutants Soil Classification: Not classified Map Sheet: Sheet 40 Thames Estuary Scale: 1:100,000	A13SE (SE)	0	3	534035 191248
	Drift Deposits None
