Hi James and Daniel

I observed cavity on the new growth after the bowl and on some large newer growth.

This work is more about safety and getting it back to a sensible size for the space.

Any lost limbs at this stage are a danger to life.

Please find attached photo where we intend to cut back to. The photo with the silver car doesn't do the size justice as that side it isn't so huge.

It's from the other side where the gardens drop down about 6m that you can really feel how imposing it is.

Kind regards
Liam
