

4.5.2 The Arcade

The proposed open to air pedestrian path between H1 and H2 will become an important link between Coburg Road and the new square. Active frontage on both sides consisting of building entrances and a variety of commercial uses will enliven this route, providing a safe and vibrant pedestrian experience.

A lightweight and open canopy above the route will create a sense of enclosure while maintaining an open connection to the sky. The design of the canopy will refer to the industrial heritage of the site and provide support for integrated lighting to the Arcade space.

The design of the canopy will form an art commission project and is described in the Cultural Strategy, prepared by Dallas–Pierce–Quintero, accompanying this application.

Key: Plan
