

8.7 Bay Studies

8.7.1 H1 Facade to the Square

- ① A strongly articulated double height base grounds the building and provides a civic address to the square.
- ② Glazed façade of the restaurant set back behind double-height piers facing the square.
- ③ Angled vertical piers on the east and west façades provide shading and elevational relief.
- ④ Robust vertical piers on the north and south façades creates a sense of formality, while the subtle scalloped shape provides fine detailing and interest.

8.7.2 H1 Crown

- ① Double height crown on H1 proportionally appropriate for the scale of the building.
- ② Slim vertical profiles extended to east and west sides of the crown, with extra fins added to increase morning and afternoon shading on these façades.
- ③ Set-out of the vertical profiles of the crown aligned with the facade piers and fenestration design below.
- ④ Textured grey in-fill panels.
- ⑤ Rectilinear shape of the building defined and strengthened with a continuous edge banding at roof level.
