

EnviroSmart

Phase 1 Contaminated Land Assessment

Site address

13 Bedford Road
London
N22 7AU

Date issued

July 2023

Report status

Final

Grid Reference

530190, 190480

Site Area

0.039 ha

Report prepared for

Adelfia Properties Limited

Report reference

79540R1

Risk – Moderate/Low

As the Site is proposed to be comprised of 100% hardstanding, no immediate action is recommended, but a watching brief should be observed during all proposed redevelopment activities and associated ground works (which would include a thorough inspection of any exposed sub surface soils/Made Ground). Provide a copy of this report to ground workers. Specify barrier pipework where water supplies are laid within Made Ground

www.geosmartinfo.co.uk

The purpose of this EnviroSmart report is to provide clear and pragmatic advice regarding the nature and potential significance of contaminated land hazards which may be present at the study site. GeoSmart are providing consultancy and professional opinion based upon our collation, interpretation and assessment of information contained within an Envirocheck report, and other sources where expressly stated (i.e. site visits, photographs, and anecdotal evidence). It is acknowledged that the risk assessment findings are based on documentary sources of information alone.

Site analysis

1. Probability/likelihood of a contaminant hazard at the Site	High likelihood	
	Likely	
	Low likelihood	
	Unlikely	
2. Potential severity/consequence of any impacts	Severe	
	Medium	
	Mild	
	Minor	
3. Overall land quality risks posed by the Site	Very high	
	High	
	Moderate	
	Moderate/low	
	Low	
	Very low	

Summary of existing and proposed development

The Site is currently used within a commercial capacity as a garage and MOT centre, with associated car parking area. Development proposals comprise the construction of a new mixed use facility, including commercial units at ground floor and residential units on the upper floors. The proposed development will be comprised of 100% hardstanding.

Environmental Setting

British Geological Survey mapping indicates the absence of any superficial deposits beneath the Site. The bedrock geology consists of London Clay which is classified as Unproductive Strata.

There are no significant surface water features within 250 m of the Site.

The nearest sensitive land use is Alexandra Palace & Park local nature reserve c. 80m south

Site History

Historic mapping indicates that the Site was first developed by 1935. Off-Site historical land uses include agricultural land, railway land and residential land use.

Radon

The Site lies in an area where <1% of homes are at or above the UK radon action level (200 Bq/m3).

Coal Mining

The Site does not lie within an identified coal mining area and is therefore unlikely to be affected by related ground stability or mine gas issues.

Summary of Conceptual Site Model (CSM)

Source of Contamination

Potential for inorganic and low volatility organic contaminants to be present within the subsurface soils. Potential for volatile organic contaminants to be present within the subsurface soils. Potential for dissolved phase contaminants to be present within shallow groundwater. Potential for elevated methane and carbon dioxide to be present within the subsurface soils.

Receptors

Human Health

Human Health (pathway)

Ingress into water supply pipework and subsequent water ingestion. Migration of vapours to surface; inhalation indoors. Lateral and vertical migration into on-Site buildings; potential to cause asphyxiation or an explosion.

Preliminary Risk Assessment

As the Site is proposed to be comprised of 100% hardstanding with open plan commercial units proposed at ground floor level, the preliminary risk classification of the Site in relation to the proposed redevelopment is considered to be Moderate/Low.

Recommendations / Next Steps

No immediate action but observe a watching brief

It is noted that whilst a limited intrusive site investigation (including appropriate laboratory testing of soil samples) could be adopted in order to validate the preliminary risk assessment conclusions, a watching brief during all proposed redevelopment activities and associated ground works (which would include a thorough inspection of any exposed subsurface soils/Made Ground) would likely be sufficient.

1. Introduction

1.1 Background

The study site (from herein known as 'the Site') is situated at 13 Bedford Road in London, N22 7AU. A location plan of the Site is shown in Section 1.5. A proposed development plan of the Site is shown in Section 1.6.

GeoSmart was commissioned by Adelfia Properties Limited in June 2023 to undertake a Phase 1 Land Quality Assessment for the Site. The report has been requested in order to support a proposed planning application for the Site.

The proposed development is for the construction of a new residential apartment block.

The EnviroSmart report has been undertaken by firstly compiling information concerning the Site and the surrounding area, including current and historical land uses, geological records and registered pollution incidents. The information which is gathered is then used to construct a 'conceptual site model', including an understanding of likely contaminant sources, pathways and receptors. Finally, a preliminary assessment of risks posed to identified receptors (i.e., people, buildings or the natural environment) from the anticipated land quality at the Site is performed. The risk assessment methodology is consistent with CIRIA C552 (2001); see Section 3.4 for details.

1.2 Purpose of this report

The purpose of this EnviroSmart report is to provide clear and pragmatic advice regarding the nature and potential significance of contamination hazards which may be present at the Site.

1.3 Report contents

This report is divided into two sections, as described below:

Section	Content	Purpose
Section 2: LAND QUALITY ASSESSMENT	A summary of the site history and environmental setting, the findings of the preliminary risk assessment and associated recommendations	To present a clear and concise overview of the land quality issues facing the Site, including recommendations of how to manage any land contamination which may be present
Section 3: SUPPORTING INFORMATION	A collection of site specific information on which the land quality assessment is based	To provide detailed information in support of the risk assessment; this section also represents a source of reference data for use in any subsequent site works/assessments

1.4 Report limitations

It is noted that the findings presented in this report are largely based on information supplied by third parties. Whilst we assume that all information is representative of past and present conditions we can offer no guarantee as to its validity.

This report excludes consideration of potential hazards arising from any activities at the Site other than normal use and occupancy for the intended land uses. Hazards associated with any other activities have not been assessed and must be subject to a specific risk assessment by the parties responsible for those activities.

1.5 Site location plan

www.geosmartinfo.co.uk

2. Land quality assessment

2.1 Site details

Site name:	13 Bedford Road	Current land cover:	100% hardstanding and building cover
Current use:	Active commercial/industrial development		
Proposed use:	Residential flats	Site area:	0.039 ha

2.2 Conceptual understanding (potential sources of contamination)

 Site history <i>(historical land use taken within 250m radius of the Site boundary)</i>	Date	Description of land use		POTENTIAL SOURCES OF CONTAMINATION	Source description	LIKELY PROBABILITY OF CONTAMINATION
		On-Site	Off-Site			
	1868-1873	Site undeveloped.	Railway tracks and associated embankment located c. 35m north east. Woodgreen station mapped c. 80m south east. Agricultural land mapped to the south and west of the Site. Undefined farm buildings mapped c. 200m south west and c. 240m south. Small pond mapped c. 240m south east.			
	1872-1879	No discernible change on-Site.	No discernible change off-Site.			
	1879-1881	No discernible change on-Site.	New River mapped c. 250m south east.			
	1894-1895	No discernible change on-Site.	Residential development from c. 20m west and c. 110m north east. Additional platforms constructed at the nearby Woodgreen station. Secondary railway tracks and embankment constructed c. 250m north east (Palace Gate Station). Banquet Hall and associated landscaping constructed c. 250m south west. Circular feature (assumed pond) mapped c. 210m south west. Pond no longer mapped c. 240m south east.		The land use history suggests that there is the potential for contamination to have occurred <u>on-Site and off-Site</u> relating to the following: Garage: Miscellaneous fuel or chemical spills/leaks (i.e. fuels used for refilling and storage in UST's, oils, lubricants, greases, antifreeze residues ,etc.) associated with the Site's use as a filling station and garage. Potential for underground tanks or other buried infrastructure including former waste oil pits, inspection pits, grease pits, drainage interceptors, etc. Made Ground associated with former development/demolition activities. Asbestos containing materials (ACM) may have been incorporated within the built structures in the past; the disturbance of any such materials may have resulted in asbestos being present within the sub surface surrounding the buildings.	
	1896	No discernible change on-Site.	No discernible change off-Site.			

2.2 Conceptual understanding (potential sources of contamination)

 Site history (historical land use taken within 250m radius of the Site boundary)	Date	Description of land use		POTENTIAL SOURCES OF CONTAMINATION	Source description	LIKELY	PROBABILITY OF CONTAMINATION
		On-Site	Off-Site				
	1912-1914	No discernible change on-Site.	Further residential development from adjacent to the north of the Site. Crushing Mill mapped c. 170m north. Pond no longer mapped c. 210m south west.				
	1920	No discernible change on-Site.	No discernible change off-Site.				
	1935	Undefined building constructed across the entirety of the Site.	Tennis courts constructed c. 200m south west.				
	1938	No discernible change on-Site.	No discernible change off-Site.				
	1945 (aerial imagery)	Undefined building no longer shown on Site.	No discernible change off-Site.				
	1951-1952	No discernible change on-Site.	No discernible change off-Site.				
	1951-1955	Building on Site mapped as a garage.	Woodland mapped adjacent to the western boundary. Garage mapped c. 115m north west. Crushing Mill no longer mapped c. 170m north. Tennis courts no longer mapped c. 200m south west. Carriage shed mapped c. 250m north.				
	1952-1956	No discernible change on-Site.	No discernible change off-Site.				
	1955-1983	No discernible change on-Site.	Carriage shed mapped as Carriage repair depot. Coal depot mapped c. 250m north east.				
	1962-1968	No discernible change on-Site.	No discernible change off-Site.				
	1963-1973	No discernible change on-Site.	No discernible change off-Site.				
	1973-1976	No discernible change on-Site.	No discernible change off-Site.				
	1975-1990 (partial map)	Partial map.	No discernible change off-Site.				
	1977-1983	No discernible change on-Site.	No discernible change off-Site.				
	1981-1984	No discernible change on-Site.	No discernible change off-Site.				

2.2 Conceptual understanding (potential sources of contamination)

 Site history <i>(historical land use taken within 250m radius of the Site boundary)</i>	Date	Description of land use		POTENTIAL SOURCES OF CONTAMINATION	Source description	LIKELY	PROBABILITY OF CONTAMINATION
		On-Site	Off-Site				
	1987 (partial map)	Partial map.	No discernible change off-Site.				
	1990-1996	No discernible change on-Site.	No discernible change off-Site.				
	1991	No discernible change on-Site.	Residential building constructed adjacent to the western boundary of the Site and referred to as 'Forest Lodges'.				
	1991-2022 (aerial imagery)	No discernible change on-Site.	No discernible change off-Site.				
	1991-1995	No discernible change on-Site.	No discernible change off-Site.				
	1992	No discernible change on-Site.	No discernible change off-Site.				
	1999	No discernible change on-Site.	No discernible change off-Site.				
	2023	No discernible change on-Site.	No discernible change off-Site.				

2.2 Conceptual understanding (potential sources of contamination)

 Current land use	The Site is currently used within a commercial capacity as a garage and MOT centre, with associated car parking area. The client has indicated that the Site was used as a petrol station c. 25 years ago. There are one or more buried storage tanks known to be present on Site. The client has indicated that two petrol tanks are present, now filled with water. There is no known bulk fuel or chemical storage on Site.			POTENTIAL SOURCES OF CONTAMINATION	Given the Site's current use, there is potential for localised contamination relating to the following: -Miscellaneous fuel or chemical spills/leaks. -Potential for underground tanks or other buried infrastructure including former waste oil pits, inspection pits, grease pits, drainage interceptors, etc. -Made Ground associated with former development/demolition activities.	LOW LIKELIHOOD																																																							
 Neighbouring industrial land uses <i>(see environmental data report in Section 3.3 for full listing)</i>	There are one or more potentially contaminative land uses are located within 250 m of the Site: <table><tr><th>Distance from Site</th><th>Number of active industrial land uses</th><th>Number of inactive industrial land uses</th></tr><tr><td>1 - 50 m</td><td>0</td><td>0</td></tr><tr><td>51 - 100m</td><td>0</td><td>3</td></tr><tr><td>101 - 250 m</td><td>4</td><td>12</td></tr></table> <table><tr><th>Nr</th><th>Nearest distance</th><th>Land use / permitted activity / authorisation</th></tr><tr><td>0</td><td>NA</td><td>Fuel station entries</td></tr><tr><td>0</td><td>NA</td><td>Gas pipelines</td></tr><tr><td>0</td><td>NA</td><td>Underground electrical cables</td></tr><tr><td>0</td><td>NA</td><td>Control of major accident hazards sites (COMAH)</td></tr><tr><td>0</td><td>NA</td><td>Notification of installations handling hazardous substances (NIHHS)</td></tr><tr><td>0</td><td>NA</td><td>Explosives sites</td></tr><tr><td>0</td><td>NA</td><td>Planning hazardous substance consents</td></tr><tr><td>0</td><td>NA</td><td>Planning hazardous substance enforcements</td></tr><tr><td>0</td><td>NA</td><td>Sites determined as Contaminated Land under Part IIA of the Environmental Protection Act 1990</td></tr><tr><td>0</td><td>NA</td><td>Records of Licensed Discharge Consents.</td></tr><tr><td>0</td><td>NA</td><td>Integrated pollution prevention and control sites</td></tr><tr><td>1</td><td>c. 115m NW</td><td>Local Authority pollution prevention and control sites</td></tr><tr><td>0</td><td>NA</td><td>Local Authority pollution prevention and control enforcements</td></tr><tr><td>0</td><td>NA</td><td>Records of Category 3 or 4 Radioactive Substance Licences</td></tr></table>		Distance from Site		Number of active industrial land uses	Number of inactive industrial land uses	1 - 50 m	0	0	51 - 100m	0	3	101 - 250 m	4	12	Nr	Nearest distance	Land use / permitted activity / authorisation	0	NA	Fuel station entries	0	NA	Gas pipelines	0	NA	Underground electrical cables	0	NA	Control of major accident hazards sites (COMAH)	0	NA	Notification of installations handling hazardous substances (NIHHS)	0	NA	Explosives sites	0	NA	Planning hazardous substance consents	0	NA	Planning hazardous substance enforcements	0	NA	Sites determined as Contaminated Land under Part IIA of the Environmental Protection Act 1990	0	NA	Records of Licensed Discharge Consents.	0	NA	Integrated pollution prevention and control sites	1	c. 115m NW	Local Authority pollution prevention and control sites	0	NA	Local Authority pollution prevention and control enforcements	0	NA	Records of Category 3 or 4 Radioactive Substance Licences	The potentially contaminative land uses/activities identified in close vicinity of the Site may pose a contamination hazard to the Site should relevant contaminant pathways exist. Contemporary trade directory entries include: Simply Printing (printers) located c. 65m north. Status: inactive. Crescent Cars (garage services) located c. 100m north west. Status: inactive. Rainbow Office Design (office furniture and equipment) located c. 105m north west. Status: active. Palace Gates (dry cleaners) located c. 115m north west. Status: inactive. Station Cars (car dealers) located c. 125m east. Status: inactive. Aliodo Order Expert (computer manufacturers) located c. 130m north. Status: inactive. M P M Products Ltd (pet foods and animal feeds) located c. 145m east. Status: inactive.

					PROBABILITY OF CONTAMINATION																																																								

2.2 Conceptual understanding (potential sources of contamination)

 EA recorded pollution incidents <i>(see environmental data report in Section 3.3 for full listing)</i>	No Environment Agency pollution incidents have been recorded within 250 m of the Site.	POTENTIAL SOURCES OF CONTAMINATION	No potential for gross contamination has been identified in relation to any pollution incidents occurring near to the Site.	NEGLECTIBLE	PROBABILITY OF CONTAMINATION
 Landfills / waste sites <i>(taken within 500m radius of the Site boundary, see environmental data report in Section 3.3 for full listing)</i>	There are no BGS recorded landfills located within 500 m of the Site. There are no Environment Agency listed historical landfills located within 500 m of the Site. There are no registered landfills located within 500 m of the Site. There are no Local Authority listed historical landfills located within 500 m of the Site. The following other waste sites are registered within 500 m of the Site: 3 Records of registered waste transfer sites. 1 Records of registered waste treatment or disposal sites. 1 Records of licenced waste management facilities.		Given the absence of any historical or operational landfills within close proximity of the Site no associated contamination hazards have been identified. Whilst waste sites have been identified in the vicinity of the Site, these are located more than 200m from the Site. It is also recognised that any contaminant migration from the waste management sites will likely be constrained by the low permeability of the underlying geology.	LOW LIKELIHOOD	

2.2 Conceptual understanding (potential sources of contamination)

Rn Radon (see environmental data report in Section 3.3 for full listing)	According to current UK radon mapping the Site lies in an area where <1% of homes are at or above the UK radon action level (200 Bq/m3).	POTENTIAL SOURCES OF CONTAMINATION	<1% of homes are at or above the UK radon action level (200 Bq/m3).	UNLIKELY	PROBABILITY OF CONTAMINATION
---	--	---	---	-----------------	-------------------------------------

2.3 Conceptual understanding (environmental sensitivity / potential severity of impacts)

 Geology and Groundwater <i>(see the environmental data report in Section 3.3 for full details)</i>	British Geological Survey mapping indicates the absence of any superficial deposits beneath the Site. British Geological Survey mapping indicates that the bedrock geology consists of London Clay (LC) which comprises of clay and is classified as Unproductive Strata. According to the GeoSmart Groundwater Flood Risk (GW5) Map (GeoSmart, 2023). The risk of groundwater flooding at the Site is 'negligible'. The Site lies within an inner groundwater Source Protection Zone (SPZ I). The following groundwater abstraction licences are held within 1 km of the Site: Thames Water Utilities Ltd. groundwater abstraction from a single point c. 280m east (various dates). Thames Water Utilities Ltd. groundwater abstraction from a single point c. 285m east. Urban Hill Limited groundwater abstraction c. 540m south east. Thames Water Utilities Ltd. Groundwater abstraction from a single point c. 810m south east. Thames Water Utilities Ltd. Groundwater abstraction from a single point c. 815m south east (various dates).	POTENTIAL RECEPTORS Unproductive Strata typically have low permeability and offer negligible water supply or river base flow potential. Based on the susceptibility of the Site to groundwater flooding, a groundwater flood risk assessment is not considered necessary for the Site. The depth to groundwater beneath the Site is unknown. The presence of one or more groundwater abstraction licences within close proximity of the Site indicates a reasonable groundwater resource potential.	MINOR	POTENTIAL SEVERITY OF IMPACT
--	--	---	---------------------	--

Superficial Geology (BGS, 2023)

Contains Ordnance Survey data © Crown copyright and database right 2023
Contains British Geological Survey materials © NERC 2023

Bedrock Geology (BGS, 2023)

Contains Ordnance Survey data © Crown copyright and database right 2023
Contains British Geological Survey materials © NERC 2023

2.3 Conceptual understanding (environmental sensitivity / potential severity of impacts)

 Geohazards <i>(see the environmental data report in Section 3.3 for full details)</i>	The Site does not lie within a 'Coal Mining Reporting Area'. There are no brine affected areas within 75 m of the Site. Artificial ground / Made Ground is anticipated on Site, associated with the neighbouring railway embankments. The following natural hazards are present at or within 50 m of the Site: - Compressible ground deposits - Shrinking or swelling clay - Landslides / slope stability problems	POTENTIAL RECEPTORS	The Site does not lie within an identified coal mining area and is therefore unlikely to be affected by related ground stability or mine gas issues. The Site does not lie within an area of former brine working and is therefore unlikely to be affected by related ground stability issues. BGS GeoIndex Onshore mapping indicates the presence of infilled ground adjacent to the eastern boundary of the Site. The Site has ground stability hazards that should be considered further as part of the redevelopment plans.	MEDIUM	POTENTIAL SEVERITY OF IMPACT
---	--	-----------------------------------	---	----------------------	--

2.3 Conceptual understanding (environmental sensitivity / potential severity of impacts)

 Surface water <i>(see the environmental data report in Section 3.3 for full details)</i>	Whilst a surface water feature has been identified c. 105m north of the Site, due to its minor nature (<3m in length) the feature has not been carried through to the risk assessment. The Site lies within a Flood Zone 1 (low probability). There are no surface water abstraction licences within 1 km of the Site.	POTENTIAL RECEPTORS	No relevant surface water receptors have been identified.	NEGLECTIBLE	POTENTIAL SEVERITY OF IMPACT
 Environmental designations <i>(see the environmental data report in Section 3.3 for full details)</i>	The following environmentally sensitive land uses are present within 500 m of the Site: Alexandra Palace and Park Local nature reserve is located c. 80m south of the Site.		Given the distance from the Site and the nature of the local geology, the sensitivity of local environmental designations is judged to be low.	MILD	
 Human receptors	Proposed residents/users of the Site plus neighbouring residences.		Human receptors are proposed to be present on Site.	SEVERE	

2.4 Regulator perspective

Consultation date	20th June 2023	Haringey London Borough Council
GeoSmart consultant	Rebecca Conway	Carbon Management (Pollution Team)
Consultation outcome	<i>a. Is the Site on the list of sites of potential concern with regards to contaminated land which may be prioritised for investigation?</i> – No, the site is not on our list of sites of potential concern with regards to contaminated land which may be prioritised for investigation. However, should there be any need for the site to be re-developed from its existing use, we would be asking for a contaminated land investigation to be carried out for the site as part of the planning requirement for such development especially where such development is for the construction of a new residential apartment block as stated in your email enquiry. <i>b. Are you aware of any previous investigations of this site or any neighbouring sites?</i> – From the review of all the 14 planning applications submitted on the site from 1954 – 2018, there is none of such that warrant the need to undertake any site investigation. <i>c. Do you have any local knowledge about the Site that may not necessarily appear on a search of commercial databases (Envirocheck)?</i> – From our land contamination record, we can confirm the site is identified as an unspecified garage and also within 30m of a railways site of medium risk.	

2.5 Preliminary Risk Assessment

Nr	Sources	Pathways	TYPE	Receptors	Consequence	Probability	Risk classification	Comments
On-Site sources								
1	Potential for inorganic and low volatility organic contaminants to be present within the subsurface soils	Dermal contact, ingestion & inhalation of soils & soil dust	HH	Future Site occupants	MEDIUM	UNLIKELY	LOW RISK	Given the proposed presence of hard standing across the entire Site, no routine exposure to any subsurface contamination is considered likely.
2		Consumption of home grown produce	HH		MEDIUM	UNLIKELY	LOW RISK	
3		Ingress into water supply pipework and subsequent water ingestion	HH		MEDIUM	LOW LIKELIHOOD	MODERATE/LOW RISK	It would be prudent to ensure any new water supply was installed in clean fill trenches utilising barrier pipework as a precaution.
4		Building materials in direct contact with aggressive ground	PROP	Future Site buildings	MEDIUM	LOW LIKELIHOOD	MODERATE/LOW RISK	Given the potential presence of Made Ground beneath the Site, it would be considered prudent to verify the underlying ground condition prior to foundation design.
5		Dissolution into pore water/shallow groundwater and subsequent migration	CW	London Clay (Unproductive Strata)	MILD	LOW LIKELIHOOD	LOW RISK	The low permeability of the underlying geology is likely to offer some protection to the underlying groundwater from surface based contaminants.
6		Dissolution into pore water/shallow groundwater and subsequent lateral migration	ECO	Alexandra Palace & Park nature reserve c. 80m south	MILD	UNLIKELY	VERY LOW RISK	The risk classification reflects the reasonable distance to the nearest sensitive land use and the low permeability of the underlying geology.

2.5 Preliminary Risk Assessment

Nr	Sources	Pathways	TYPE	Receptors	Consequence	Probability	Risk classification	Comments
7	Potential for volatile organic contaminants to be present within the subsurface soils	Dermal contact, ingestion & inhalation of soils & soil dust	HH	Future Site occupants	MEDIUM	UNLIKELY	LOW RISK	Given the proposed presence of hard standing across the entire Site, no routine exposure to any subsurface contamination is considered likely.
8		Consumption of home grown produce	HH		MEDIUM	UNLIKELY	LOW RISK	
9		Ingress into water supply pipework and subsequent water ingestion	HH		MEDIUM	LOW LIKELIHOOD	MODERATE/LOW RISK	It would be prudent to ensure any new water supply was installed in clean fill trenches utilising barrier pipework as a precaution.
10		Migration of vapours to surface; inhalation indoors	HH		MEDIUM	LOW LIKELIHOOD	MODERATE/LOW RISK	As two petrol tank have been located on Site historically, in the event of leaks or spills these could pose a vapour risk to future Site users. However, it is recognised that the ground floor of the development will contain large open plan commercial units only, with residential units limited to the upper floors. Consequently, potential for accumulation in smaller units would be limited.
11		Migration of vapours to surface; inhalation outdoors	HH		MEDIUM	UNLIKELY	LOW RISK	
12		Building materials in direct contact with aggressive ground	PROP	Future Site buildings	MEDIUM	LOW LIKELIHOOD	MODERATE/LOW RISK	Given the potential presence of Made Ground beneath the Site, it would be considered prudent to verify the underlying ground condition prior to foundation design.
13		Dissolution into pore water/shallow groundwater and subsequent migration	CW	London Clay (Unproductive Strata)	MILD	LOW LIKELIHOOD	LOW RISK	The low permeability of the underlying geology is likely to offer some protection to the underlying groundwater from surface based contaminants.

2.5 Preliminary Risk Assessment

Nr	Sources	Pathways	TYPE	Receptors	Consequence	Probability	Risk classification	Comments
14	Potential for volatile organic contaminants to be present within the subsurface soils	Dissolution into pore water/shallow groundwater and subsequent lateral migration	ECO	Alexandra Palace & Park nature reserve c. 80m south	MILD	UNLIKELY	VERY LOW RISK	The risk classification reflects the reasonable distance to the nearest sensitive land use and the low permeability of the underlying geology.

2.5 Preliminary Risk Assessment

Nr	Sources	Pathways	TYPE	Receptors	Consequence	Probability	Risk classification	Comments
15	Potential for asbestos containing materials within the subsurface soils	Liberation of sub surface ACMs and inhalation of asbestos fibres	HH	Future Site occupants	MEDIUM	NEGLECTIBLE	NO DISCERNABLE RISK	An asbestos survey undertaken on Site in March 2023 confirms that no ACMs are present on Site (Section 3.7).
16	Potential for dissolved phase contaminants to be present within shallow groundwater	Lateral and vertical groundwater movement via natural or artificial flow paths	CW	London Clay (Unproductive Strata)	MILD	LOW LIKELIHOOD	LOW RISK	The low permeability of the underlying geology is likely to offer some protection to the underlying groundwater from surface based contaminants.
17		Lateral and vertical groundwater movement via natural or artificial flow paths	ECO	Alexandra Palace & Park nature reserve c. 80m south	MILD	UNLIKELY	VERY LOW RISK	The risk classification reflects the reasonable distance to the nearest sensitive land use and the low permeability of the underlying geology.
18	Potential for elevated methane to be present within the sub-surface soils	Lateral and vertical migration into on-Site buildings; potential to cause an explosion	HH	On-Site properties and their occupants	SEVERE	UNLIKELY	MODERATE/LOW RISK	Based on the prevailing conceptual understanding, an appreciable gas source is considered unlikely. The risk classification is a reflection of the severity of consequences rather than the likelihood of occurrence.
19		Lateral migration towards off-Site buildings; potential to cause an explosion	HH	Off-Site properties and their occupants	SEVERE	UNLIKELY	MODERATE/LOW RISK	
20	Potential for elevated carbon dioxide to be present within the subsurface soils	Lateral and vertical migration into on-Site buildings; potential to cause asphyxiation	HH	Occupants of on-Site buildings	SEVERE	UNLIKELY	MODERATE/LOW RISK	
21		Lateral migration towards off-Site buildings; potential to cause asphyxiation	HH	Occupants of off-Site buildings	SEVERE	UNLIKELY	MODERATE/LOW RISK	
22	Potential for radon within the subsurface	Lateral migration towards on-Site buildings; potential to cause long term health effects	HH	Occupants of on-Site buildings	MEDIUM	UNLIKELY	LOW RISK	The Site lies in an area where <1% of homes are at or above the UK radon action level (200 Bq/m3).
OVERALL RISK RATING							MODERATE/LOW RISK	

2.5 Preliminary Risk Assessment

Nr	Sources	Pathways	TYPE	Receptors	Consequence	Probability	Risk classification	Comments
Off-Site sources: Railway land c. 35m north east								
23	Potential for both inorganic and volatile organic contaminants to be present within the subsurface soils	Dermal contact, ingestion & inhalation of soils & soil dust	III	Future Site occupants	MEDIUM	UNLIKELY	LOW RISK	Given the close proximity of the railway line and associated embankments to the Site (directly adjacent) there is potential for both inorganic and organic contaminants to be present associated with this land use. However, given the proposed presence of hard standing across the entire Site, no routine exposure to any subsurface contamination is considered likely.
24		Consumption of home grown produce	III		MEDIUM	UNLIKELY	LOW RISK	Given the proposed presence of hard standing across the entire Site, no routine exposure to any subsurface contamination is considered likely.
25		Ingress into water supply pipework and subsequent water ingestion	III		MEDIUM	UNLIKELY	LOW RISK	It would be prudent to ensure any new water supply was installed in clean fill trenches utilising barrier pipework as a precaution.

2.5 Preliminary Risk Assessment

Nr	Sources	Pathways	TYPE	Receptors	Consequence	Probability	Risk classification	Comments
Off-Site sources: Railway land c. 35m north east								
26	Potential for both inorganic and volatile organic contaminants to be present within the subsurface soils	Migration of vapours to surface; inhalation indoors	HH	Future Site occupants	MEDIUM	UNLIKELY	LOW RISK	The presence of railway land c. 35m from the Site has the potential to have given rise to fuel leaks and spills which could represent a potential vapour source. However, it is recognised that the ground floor of the development will contain commercial units only, with residential units limited to the upper floors. Consequently, the soil vapour pathway would be limited.
27		Migration of vapours to surface; inhalation outdoors	HH		MEDIUM	UNLIKELY	LOW RISK	
	OVERALL RISK RATING						LOW RISK	

2.6 Next Steps

✓	No immediate action but observe a watching brief		Given the known history of the Site it is considered possible that significant contamination is present within the sub-surface. However, given that the proposed development comprises hardstanding across the entire Site, with no residential units on the ground floor, the preliminary risk assessment suggests that the risks posed by in situ land quality to human health is therefore likely to be low to moderate/low. It is noted that whilst a limited intrusive site investigation (including appropriate laboratory testing of soil samples) could be adopted in order to validate the preliminary risk assessment conclusions, a watching brief during all proposed redevelopment activities will likely be sufficient. The watching brief should be maintained throughout the entire development phase of works and any possible evidence of contamination encountered during the redevelopment works should be alerted to the Local Authority. Appropriate actions would then be required to further inspect, sample and analyse any suspect materials, and formulate an appropriate remediation plan, as necessary.

3. Supporting Information

The following supporting information is contained in this section:

Section	Content
3.1	Referenced materials used in the EnviroSmart reporting
3.2	Site photographs
3.3	Published environmental data records (Landmark Envirocheck report Alexandra Motors, 13 Bedford Road, London N22 7AU. REF: 313143186_1_1) including: • Aerial photographs and site map • Environmental permits, incidents and registers • Landfill and other waste sites • Current land use information • Geology • Hydrogeology and hydrology • Flooding • Designated environmentally sensitive sites • Other environmental factors
3.4	Risk assessment methodology
3.5	Historical land use maps
3.6	Topography maps
3.7	Asbestos survey report (NSUK, 2023)

Disclaimer

This report has been prepared by GeoSmart in its professional capacity as soil and water specialists, with reasonable skill, care and diligence within the agreed scope and terms of contract and taking account of the manpower and resources devoted to it by agreement with its client, and is provided by GeoSmart solely for the internal use of its client.

The advice and opinions in this report should be read and relied on only in the context of the report as a whole, taking account of the terms of reference agreed with the client. The findings are based on the information made available to GeoSmart at the date of the report (and will have been assumed to be correct) and on current UK standards, codes, technology and practices as at that time. They do not purport to include any manner of legal advice or opinion. New information or changes in conditions and regulatory requirements may occur in future, which will change the conclusions presented here.

This report is confidential to the client. The client may submit the report to regulatory bodies, where appropriate. Should the client wish to release this report to any other third party for that party's reliance, GeoSmart may, by prior written agreement, agree to such release, provided that it is acknowledged that GeoSmart accepts no responsibility of any nature to any third party to whom this report or any part thereof is made known. GeoSmart accepts no responsibility for any loss or damage incurred as a result, and the third party does not acquire any rights whatsoever, contractual or otherwise, against GeoSmart except as expressly agreed with GeoSmart in writing.

Important consumer protection information

This search has been produced by GeoSmart Information Limited, Suite 9-11, 1st Floor, Old Bank Buildings, Bellstone, Shrewsbury, SY1 1HU.

Tel: 01743 298100

Email: info@geosmartinfo.co.uk

GeoSmart Information Ltd is registered with the Property Codes Compliance Board (PCCB) as a subscriber to the Search Code. The PCCB independently monitors how registered search firms maintain compliance with the Code.

The Search Code

- provides protection for homebuyers, sellers, estate agents, conveyancers and mortgage lenders who rely on the information included in property search reports undertaken by subscribers on residential and commercial property within the United Kingdom
- sets out minimum standards which firms compiling and selling search reports have to meet
- promotes the best practice and quality standards within the industry for the benefit of consumers and property professionals
- enables consumers and property professionals to have confidence in firms which subscribe to the code, their products and services.

By giving you this information, the search firm is confirming that they keep to the principles of the Code. This provides important protection for you.

The Code's core principles

Firms which subscribe to the Search Code will:

- display the Search Code logo prominently on their search reports
- act with integrity and carry out work with due skill, care and diligence
- at all times maintain adequate and appropriate insurance to protect consumers
- conduct business in an honest, fair and professional manner
- handle complaints speedily and fairly
- ensure that products and services comply with industry registration rules and standards and relevant laws
- monitor their compliance with the Code

Complaints

If you have a query or complaint about your search, you should raise it directly with the search firm, and if appropriate ask for any complaint to be considered under their formal internal complaints procedure. If you remain dissatisfied with the firm's final response, after your complaint has been formally considered, or if the firm has exceeded the response timescales, you may refer your complaint for consideration under The Property Ombudsman scheme (TPOs). The Ombudsman can award up to £5,000 to you if the Ombudsman finds that you have suffered actual financial loss and/or aggravation, distress or inconvenience as a result of your search provider failing to keep to the Code.

Please note that all queries or complaints regarding your search should be directed to your search provider in the first instance, not to TPOs or to the PCCB.

TPOs contact details:

The Property Ombudsman scheme

Milford House

43-55 Milford Street

Salisbury

Wiltshire SP1 2BP

Tel: 01722 333306

Fax: 01722 332296

Email: admin@tpos.co.uk

You can get more information about the PCCB from www.propertycodes.org.uk

Please ask your search provider if you would like a copy of the search code

Complaints procedure

GeoSmart Information Limited is registered with the Property Codes Compliance Board as a subscriber to the Search Code. A key commitment under the Code is that firms will handle any complaints both speedily and fairly. If you want to make a complaint, we will:

- Acknowledge it within 5 working days of receipt.
- Normally deal with it fully and provide a final response, in writing, within 20 working days of receipt.
- Keep you informed by letter, telephone or e-mail, as you prefer, if we need more time.
- Provide a final response, in writing, at the latest within 40 working days of receipt.
- Liaise, at your request, with anyone acting formally on your behalf.

If you are not satisfied with our final response, or if we exceed the response timescales, you may refer the complaint to The Property Ombudsman scheme (TPOs): Tel: 01722 333306, E-mail: admin@tpos.co.uk.

We will co-operate fully with the Ombudsman during an investigation and comply with his final decision. Complaints should be sent to:

Introduction

The Environment Act 1995 has made site sensitivity a key issue, as the legislation pays as much attention to the pathways by which contamination could spread, and to the vulnerable targets of contamination, as it does the potential sources of contamination. For this reason, Landmark's Site Sensitivity maps and Datasheet(s) place great emphasis on statutory data provided by the Environment Agency/Natural Resources Wales and the Scottish Environment Protection Agency; it also incorporates data from Natural England (and the Scottish and Welsh equivalents) and Local Authorities; and highlights hydrogeological features required by environmental and geotechnical consultants. It does not include any information concerning past uses of land. The datasheet is produced by querying the Landmark database to a distance defined by the client from a site boundary provided by the client. In this datasheet the National Grid References (NGRs) are rounded to the nearest 10m in accordance with Landmark's agreements with a number of Data Suppliers.

3.4 Risk assessment methodology

The method of risk evaluation adopted in this document is consistent with CIRIA C552 (2001). Hence, risk is considered to be a function of both the probability (likelihood) of contamination occurring at the study site and also the potential severity (consequence) of the environmental impacts associated with this contamination.

The classification system used to define contaminant probability, consequence and risk is described in the following tables.

Table A: Classification of probability

Classification	Definition
High likelihood	There is a contaminant linkage and an event that appears either very likely in the short term and almost inevitable over the long term, or there is evidence at the receptor of harm or pollution.
Likely	There is a contaminant linkage and all the elements are present and in the right place, which means that it is probable that an event will occur. Circumstances are such that an event is not inevitable, but possible in the short term, and likely over the long term.
Low likelihood	There is a contaminant linkage and circumstances are possible under which an event could occur. However, it is by no means certain that even over a longer period such event would take place, and is less likely in the shorter term.
Unlikely	There is contaminant linkage but circumstances are such that it is improbable that an event would occur even in the long term.

Table B: Classification of consequence

Classification	Receptor	Definition	Examples
Severe	Humans	Short-term (acute) risk to human health likely to result in "significant harm" as defined in the CTL Statutory Guidance	High concentrations of cyanide on the surface of an informal recreation area
	Controlled waters	Short-term risk of pollution (note: Water Resources Act contains no scope for considering significance of pollution) of sensitive water resource	Major spillage of contaminants from site into controlled water
	Property	Catastrophic damage to buildings/property	Explosion, causing building collapse (can also equate to an acute human health risk if buildings are occupied)
	Ecology	A short-term risk to a particular ecosystem, or organism forming part of such eco-system	Potentially long term derogation of a designated site or protected species
Medium	Humans	Chronic damage to human health ("significant harm" as defined in the CTL Statutory Guidance)	Concentrations of a contaminant from a residential site exceed the site-specific assessment criteria
	Controlled waters	Pollution of sensitive water resources (note: Water Resources Act contains no scope for considering significance of pollution)	Leaching of contaminants from a site to a principal or secondary aquifer
	Property	Significant damage to crops, buildings, structures and services	Damage to building rendering it unsafe to occupy (e.g. foundation damage resulting in instability)
	Ecology	A significant change in a particular ecosystem	Death of a species within a designated nature reserve

Table B: Classification of consequence (continued)

Classification	Receptor	Definition	Examples
Mild	Humans	Contamination present although unlikely to constitute a significant chronic health risk	Concentrations of a contaminant from a public access site moderately exceed the generic assessment criteria
	Controlled waters	Pollution of non-water resources	Pollution of non-classified groundwater
	Property	Damage to sensitive buildings/structures/services	Aggressive ground conditions leading to potential for long term degradation of buried concrete
	Ecology	Damage to the environment	Localised damage to aquatic habitat causing temporary relocation of certain species
Minor	Humans	Non-permanent health effects to human health (easily prevented by means such as personal protective clothing, etc.)	The presence of contaminants at such concentrations that protective equipment is required during site works
	Controlled waters	Potential minor release of contamination to local water features	Short term or low volume release of potentially polluting material to a secondary surface water course of low existing quality
	Property	Easily reparable effects of damage to buildings, structures and services. Harm which may result in a financial loss, or expenditure to resolve	The loss of plants in a landscaping scheme. Discolouration of concrete
	Ecology	Short term, localised damage may occur; consequences are spatially and temporally limited	Short term or localised disruption to in situ flora or fauna; no lasting effects

Table C: Risk classification (comparison of consequence and probability)

		Consequence (severity)			
		Severe	Medium	Mild	Minor
Probability	High likelihood	Very high risk	High risk	Moderate risk	Low risk
	Likely	High risk	Moderate risk	Moderate/low risk	Low risk
	Low likelihood	Moderate risk	Moderate/low risk	Low risk	Very low risk
	Unlikely	Moderate/low risk	Low risk	Very low risk	Very low risk

Risk Key

Very High	High	Moderate	Moderate/Low	Low	Very Low
There is a high probability that severe harm could arise to a designated receptor from an identified hazard without appropriate remediation action	Harm is likely to arise to a designated receptor from an identified hazard at the site without appropriate remediation action	It is possible that without appropriate remediation action harm could arise to a designated receptor. It is relatively unlikely that any such harm would be severe, and if any harm were to occur it is more likely that such harm would be relatively mild	It is possible that harm could arise to a designated receptor from an identified hazard. It is likely any harm would be mild	It is possible that harm could arise to a designated receptor from an identified hazard. It is likely that, at worst if any harm was realised any effects would be mild	The presence of an identified hazard does not give rise to the potential to cause harm to a receptor

3.5 Historical land use maps

Historical Ordnance Survey maps relating to the site and its surrounding area have been provided by Landmark.

Source map scale - 1:10,560

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840's. In 1854 the 1:2,500 scale was adopted for mapping urban areas; these maps were used to update the 1:10,560 maps. The published date given therefore is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas. In the late 1940's, a Provisional Edition was produced, which updated the 1:10,560 mapping from a number of sources. The maps appear unfinished - with all military camps and other strategic sites removed. These maps were initially overprinted with the National Grid. In 1970, the first 1:10,000 maps were produced using the Transverse Mercator Projection. The revision process continued until recently, with new editions appearing every 10 years or so for urban areas.

Middlesex

Published 1872 - 1879

Source map scale - 1:10,560

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840's. In 1854 the 1:2,500 scale was adopted for mapping urban areas; these maps were used to update the 1:10,560 maps. The published date given therefore is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas. In the late 1940's, a Provisional Edition was produced, which updated the 1:10,560 mapping from a number of sources. The maps appear unfinished - with all military camps and other strategic sites removed. These maps were initially overprinted with the National Grid. In 1970, the first 1:10,000 maps were produced using the Transverse Mercator Projection. The revision process continued until recently, with new editions appearing every 10 years or so for urban areas.
