

Quality-engineered doors for social housing

The importance of security and fire protection within public spaces

Protecting public spaces and social housing

Social housing providers recognise the importance of creating safe and welcoming environments for residents. However, communal areas are often targeted by intruders, vandals, and trespassers, leading to property damage, theft, and a decline in residents' sense of security.

Securing doors is an essential component in ensuring the safety and security of the premises and its occupants. Ensuring doorsets are certified to the Loss Prevention Certification Board (LPCB) or PAS24 standards will provide reassurance of how well a door can withstand attack and protect your building and occupants.

With over **30 years' engineering and UK manufacturing expertise**, Bradbury Group works alongside clients, housing contractors, and trade partners to deliver communal entrance solutions, providing essential certified security protection.

Expertly crafted by hand in the UK, the Classic^{AL} communal door range is suitable for a wide range of applications, from hotel entrances to residential blocks, schools and student accommodation. Thanks to our **industry-leading lead times** and dedicated project management, we keep your projects running smoothly and on schedule.

Bradbury Group

Family-owned since 1991, Bradbury Group has grown into a tight-knit team of hundreds of local staff, driven by the founder's passion for the best levels of service and high quality products.

Our range of Classic^{AL} doorsets are approved to **LPCB LPS 2081 Security Rating B** and come with **Secured by Design 'Police Preferred Specification'**. What's more, they are constructed from **80% recycled aluminium**, making Classic^{AL} doorsets the ideal sustainable choice for your project.

Classic^{AL} is available with a variety of locking options, including high-quality maglocks with integral surge protection, and panic escape push bars.

With a wide range of ancillary items, including side and over panels, kick plates and locking options, we also offer louvre options, for example, for bin stores and electrical cupboards.

Bradbury Group also work alongside communal applications, offering a range of M2M doorsets approved to LPCB certification up to LPS 1175 SR4, providing high levels of security protection. These doorsets come with optional CE and Certifire fire integrity, providing protection for up to 240 minutes, depending on the product.

Classic^{AL} communal doorset

Classic^{AL} communal entrance doors and panels are constructed from **80% recycled aluminium**, offering superior strength with a contemporary appearance.

Each doorset can be configured with optional side, top, or standalone panels, including cut-outs for access control. Solid and glazed E&G infill options offer a durable, secure solution for any specification.

Our Quality Inspection and sign-off process covers a 19-point plan guaranteeing robust manufacturing standards. Backed by expert engineering, **fast 4–6 week lead times**, and the ability to deliver all door types needed for social housing, Bradbury Group offers an **all-in-one solution**, making us the smart choice for reliable, high-quality communal doors.

Maintenance Package

Bradbury Group offer a maintenance package, providing peace of mind that your doors continue to perform to requirements.

A maintenance visit can be planned in from the date of the installation of the door/s or a specific date and time to suit you. The Doors will be checked for operation and condition on each visit.

A 27-point checklist will be completed, photostaken of the existing door/s internally, externally and any other findings. This also includes closer adjustment, lubrication, and a basic wipe down.

Why choose a steel door ?

Widely trusted for their reliability, endurance and strength, steel doors are frequently the door of choice for architects and specifiers.

While wooden doors have been utilised for centuries, they are susceptible to environmental damage and require an extensive level of upkeep to ensure their life expectancy, such as regular paint application. Unlike wood, steel is much more enduring with no shrinkage, cracking, or warping, providing better long-term value.

In more demanding environments, a steel door will out perform a wooden alternative and with additional benefits such as fire ratings, security certifications, sound reduction and resistance to burglary, it's clear why they're an increasingly opted-for solution.
