Executive Summary

TRC Companies Limited (TRC) was commissioned by Goya Developments (the 'Client') to undertake a Tier I (previously known as phase 1) Desk Based Geoenvironmental and Geotechnical Site Assessment at 37-39 West Road, London N17 0RE (hereafter referred to as the 'Site').

This Executive Summary is part of the complete report; and findings, opinions or conclusions in this Executive Summary are made in context with the complete report. TRC recommends that the user reads the entire report for all supporting information related to findings opinions and conclusions.

Executive Summary	
Site Details	
Client	Goya Developments
Site Address & Grid Reference	37-39 West Road, London N17 0RE Easting 534610, Northing 191580
Site Area	0.85 ha
Proposed Development	A proposed development has not been provided to TRC at the time of writing this assessment; however, TRC understands that the Client intends to redevelop the property for a continued industrial land use.
Site Setting	
Current Site Use	The Site is currently an active plot of land, which comprises a commercial type warehouse and a small fast-food kitchen.
Site History	From earliest available mapping (1864-1881), the Site appeared as undeveloped land. The Site was first developed by 1935-1936, containing one building in the western portion of the Site, one manufactory building in the north-eastern portion of the Site, and one box factory in the south-eastern portion of the Site. By 1955-1964, the buildings in the east were extended, and later combined by 1964-1975. The Site appeared in its current layout from 1964-1975.
Expected Geology	Made Ground is expected to be present at the Site to unknown depths, associated with past developments. Superficial deposits – Enfield Silt Member, over Kempton Park Gravel Member Bedrock geology – London Clay Formation
Expected Hydrogeology	Superficial deposits – Unproductive Strata, Secondary A Aquifer Bedrock geology – Unproductive Strata The Site lies within a groundwater Source Protection Zone 2, associated with the Secondary (A) Aquifers nearby the Site. Groundwater is therefore considered to be not sensitive to contamination.

Executive Summary	
Expected Hydrology	The nearest surface water feature is Pymmes Brook, which is located approximately 760m southeast of the Site. Surface water is therefore considered to be not sensitive to contamination.
Environmental Assessment	
Initial Conceptual Site Model	On Site: The Made Ground and historical operations at the Site could be a source of asbestos, heavy metals, polycyclic aromatic hydrocarbons (PAHs), total petroleum hydrocarbons (TPHs), VOCs, SVOCs and ground gases. Off Site: The surrounding site operations, including associated tanks and substations are a potential sources of asbestos, heavy metals, PAHs, TPHs, polychlorinated biphenyls (PCBs), VOCs, SVOCs and ground gases. Potentially complete contaminant linkages have been identified and are considered to pose a low risk to the identified receptors.
Ground Gas/Organic Vapour/Radon	The Made Ground onsite is considered to be a potential source of ground gas and organic vapour. Less than 1% of homes are above the Action Level, as such no special precautions are required.
Geotechnical Assessment	
Geotechnical Hazards	The following potential geotechnical hazards have been identified: • Made Ground • Buried obstructions • Buried concrete • Volume change potential • Party walls • Settlement prone natural soils • Shallow groundwater, • Historical UXO • Running sands
Other Property Related Issues	
Mining	The Site is not in an area affected by coal mining. The Site is not in an area affected by other mining activity
Flood Risk	The Site is predominantly within Flood Zone 1, which has a low probability of flooding; however, along the eastern and southern boundaries of the Site, the Site lies within Flood Zone 2, which has a medium probability of flooding from rivers and the sea. There is a very low risk of flooding from rivers, the sea, and surface water at the Site. There is a risk of flooding from reservoirs in this area. Flooding from groundwater is unlikely in this area.
Unexploded Ordnance Risk Assessment	The Site is in an area affected by historical UXO risk; as such, a Detailed UXO Risk Assessment was carried out for the Site. The Detailed UXO Risk Assessment classified the Site as a Low Risk for German anti-aircraft unexploded ordnance and a Negligible Risk for Allied unexploded ordnance. The risk assessment recommends that a UXO Risk Management Plan and site-specific UXO Awareness Briefings are given to all personnel conducting intrusive groundworks.
Recommendations	

Executive Summary

A ground investigation should be designed, implemented, and reported by a competent person, in accordance with LCRM (2020), BS10175:2011 (+A2:2017), BS5930:2015 (+A1:2020), and Eurocode 7 Part 2 (and the associated national annex), and in accordance with current relevant technical guidance. The ground investigation should confirm the geology, groundwater regime, and engineering properties of the underlying ground. Further, it should target the identified potential contaminant linkages and ensure that the geotechnical hazards identified in this report are addressed with focus on the proposed development.

Following the ground investigation, an intrusive Geoenvironmental and Geotechnical Site Assessment Report should be prepared in order to update the conceptual site model and to determine the environmental characterization of the Site. The Tier 2 report will include a geotechnical evaluation and provide geotechnical design recommendations for the proposed development.

Given the age of the building, an asbestos survey is recommended for the Site prior to presumed demolition.

A Flood Risk Assessment is recommended for the Site.

1.0 Introduction

1.1 Appointment and Purpose

TRC Companies Limited (TRC) was commissioned by Goya Developments (the 'Client') to undertake a Tier 1 (formerly known as phase 1) Desk Based Geoenvironmental and Geotechnical Site Assessment for 37-39 West Road, London N17 0RE (hereafter referred to as the 'Site').

A Site Location Plan is presented as Figure 1 in Annex A.

This Tier 1 report has been commissioned to assess environmental and geotechnical considerations, predominantly with respect to ground conditions at the Site.

1.2 Proposed Development

A proposed development has not been provided to TRC at the time of writing this assessment; however, TRC understands that the Client intends to redevelop the property for a continued industrial land use.

Based on the above, the proposed development is considered to fall into geotechnical category 2 with respect to BS EN 1997 (Eurocode 7).

The end user sensitivity is considered low for the proposed industrial end use.

A Proposed Development Plan is presented as Figure 2 in Annex A.

1.3 Available Information and Standards

This Tier 1 report presents the findings of a desk study based on the following information:

- Historical uses of the Site and surroundings;
- Current use and condition of the Site;
- Environmental setting in terms of geology, hydrogeology, hydrology and surrounding land uses, based on publicly available environmental records;
- A Landmark Envirocheck Report (Annex B); and,
- A Site visit.

This Tier I report has been conducted with due regard to the following guidance:

- The National Planning Policy Framework;
- BS5930:2015 (+A1:2020) Code of Practice for Ground Investigations;
- BS EN 1997 Eurocode 7;
- BS10175:2011 (+A2:2017) Investigation of Potentially Contaminated Sites – Code of Practice; and,
- Land Contamination Risk Management (LCRM) 2020.

1.4 Significant Assumptions

This report presents TRC's observations, findings, and conclusions as they existed on the date that this report was issued. This report is subject to modification if TRC becomes aware of additional information after the date of issue of this report that is material to its findings and conclusions.

The reliability of information provided by others to TRC cannot be guaranteed to be accurate or complete. Performance of this Tier 1 report is intended to reduce, but not eliminate, uncertainty of geo-environmental and geotechnical conditions associated with the subject site; therefore, the findings and conclusions made in this report should not be construed to warrant or guarantee the subject site, or express or imply, including without limitation, warranties as to its marketability for a particular use. TRC found no reason to question the validity of information received unless explicitly noted elsewhere in this report.

1.5 User Reliance

This report was prepared for Goya Developments. Reliance on the Report by any other third party is subject to requesting and fully executing a reliance letter between TRC and the third party that acknowledges the TRC Standard Terms and Conditions with the Client, to the same extent as if they were the Client thereunder.

TRC has been provided with information from third parties for information purposes only and without representation or warranty, express or implied as to its accuracy or completeness and without any liability on such third parties part to revise or update the information. Where reliance has been provided by third parties to potential purchasers this is noted in our report.

2.0 Site Location and Description

2.1 Site Location

The Site is located on the western side of West Road, London. It is centred on National Grid Reference Easting 534613, Northing 191580, approximately 600m Northeast of Tottenham Stadium.

The site location is presented as Figure 1 in Annex A.

2.2 Site Description

2.2.1 General

Martin Dorfling (TRC) visited the Site on 13th December 2023 to perform a site walkover. The Site's manager Aamer Johar was present during the walkover.

The building to the southwest was inaccessible to TRC at the time of writing this assessment.

Photographs of the site reconnaissance are presented in Annex C.

2.2.2 Site Walkover

The 0.85 hectare site is almost rectangular in shape, except for an additional smaller rectangular shape on the southwestern corner. This smaller rectangular shape (also covered by a warehouse) is not part of the wholesale distribution centre and was inaccessible during the walkover. The Site is located to the west of West Road. The Site was occupied by a wholesale distribution warehouse, which was operational, at the time of the walkover. The Site also has a small fast-food kitchen on the eastern side, facing the road (West Road). The buildings on site comprised a brick constructed type warehouse which is three storeys high covering most of the premises. Smaller brick feature offices are built between the larger warehouse units. The warehouse roof consists of mixed areas of tiles, corrugated iron and in some places cemented type roofing which may possibly contain asbestos.

The entire Site is covered by hardstanding. The rear parking area and the loading area next to the adjacent road is covered by asphalt hardstanding. The warehouse floor is covered by concrete hardstanding.

The Site has an average elevation of approximately 9m above Ordnance Datum (aOD). Topographically the Site is flat. The Site is served by the local drainage network, electricity network and main gas lines.

2.2.3 Above and Underground Ground Storage Tanks (AST/UST)

There were no observed above or underground ground storage tanks. The building is heated by gas from the main gas lines.

2.2.4 Hazardous Substances and Waste Management

No hazardous substances or wastes were observed on site. The type of business activity on site consists of a wholesaler having bulk stock delivered to it and then dispatched again. Minimal waste is created, with only minor cardboard boxes and plastic wrap as waste. The Site has a separate waste skip for the plastic wrap and the cardboard boxes which is emptied / collected on a weekly basis.

2.2.5 Energy Infrastructure

The Site uses electricity from the main grid and gas from the main gas lines. A main electrical line comes into the building into the electrical circuit box and is further distributed from there. No electricity substations or other energy infrastructure were observed at the Site. The Site uses minimal electrical energy as no production or manufacturing is done on site. The only electrical consumption is used for electrical lighting, office use and kitchen area. Gas from the gas mains is used for heating.

2.2.6 Asbestos Containing Materials (ACMs)

An asbestos survey was not conducted as part of this scope of works. Given the age of the buildings it is possible that asbestos containing materials may be present. Should the existing structures be demolished or refurbished, an asbestos survey will be required.

2.2.7 Non-Natural Mounds, Depressions, Excavations and Fill

The Site was covered by concrete hardstanding only and no mounds, depressions, excavations and fill were observed. It was raining the night before the site walkover and no water ponding was observed at the premises during the walkover.

2.2.8 Invasive Plant Species

The area is covered by hard standing and no plant life was observed.

2.3 Surrounding Area

The Site is located within an area of predominantly industrial and commercial. Land uses in the immediate vicinity include the following principal features:

Table 2.1: Summary of Surrounding Land Use

Direction	Land Use
North	Asphalt road and single lane for car parking, followed by commercial type building.
East	Asphalt road and single lane for car parking, followed by commercial type building.
South	Asphalt road and single lane for car parking, followed by commercial type building.
West	Commercial type warehouse building directly adjacent to Site.

2.4 Summary

TRC has noted the following potential sources of contamination during the walkover:

- Possible asbestos containing materials from the buildings.

TRC has noted the following potential geotechnical hazards during the walkover:

- Possible Made Ground underneath the hardstanding.

3.0 Review of Site Data

3.1 Environmental Setting

The environmental setting of the site can influence the susceptibility to, and relative magnitude of, environmental and geotechnical impacts and liabilities associated with on and off-site sources of contamination and geotechnical hazards.

The following sections present a summary of environmental and geotechnical reviews conducted on publicly available records.

3.1.1 Geology

The following information has been reviewed:

- The British Geological Survey (BGS) geological map, scale 1:50,000, 256, North London, 2006;
- The BGS website;
- The BGS historic boreholes with reference no. TQ39SW301, TQ39SW302, TQ39SW207 and TQ39SW296; and,
- The Landmark Envirocheck Report (Annex B).

Based on the above information, the Site is underlain by variable thickness of Made Ground over Enfield Silt Member, over Kempton Park Gravel Member, over London Clay Formation depth.

The anticipated site geology is summarised in Table 3.1.

Table 3.1: Summary of Anticipated Geology

Strata	Depth to Base (m bgl)	Depth to Base (m aOD)*	Thickness (m)	Typical Description
Made Ground	0.6	11.4	0.6	Heterogenous mix of sand, gravel and clay with anthropogenic material.
Superficial Deposits: Enfield Silt Member	1.4	10.6	0.8	Firm brown clay.
Superficial deposits: Kempton Park Gravel Member	3.7	8.3	2.3	Dense sands and gravels.
Bedrock Deposits: London Clay Formation	>12.2	<-0.2	Unknown	Stiff brown becoming grey with depth silty clay.

* Assuming a ground level of 12.0 m aOD across the Site

3.1.2 Coal Mining

The Landmark Envirocheck Report indicates that the Site is not within an area that may be affected by coal mining.

Further, according to the Coal Authority website the Site is not located within the Coal Mining Reporting Area and outside the 'Development High Risk Area'. Therefore, a Coal Mining Risk Assessment is not required.

3.1.3 Radon

BGS records indicate that the Site is in a lower probability radon area where less than 1% of homes are estimated to be at or above the Action Level. On this basis, the BGS states that “no radon protective measures are necessary in the construction of new dwellings or extensions”.

3.1.4 Seismicity

The national foreword to BS EN 1998-1:2004+A1:2013 ‘Eurocode 8: Design of Structures for Earthquake Resistance – Part 1’ states that there are no requirements in the UK to consider seismic loading, and the whole of the UK may be considered an area of very low seismicity in which the provisions of EN 1998 need not apply.

3.1.5 Hydrogeology

British Geological Survey (BGS) geological mapping and hydrogeological mapping presented by DEFRA (MAGIC website) indicate the following hydrogeological information for the Site:

Table 3.2: Summary of Hydrogeology

Geology	Geological Description	Aquifer Status	Aquifer Description
Superficial Deposits: Enfield Silt Member	Clay and Silt	Unproductive Strata	Geological strata with low permeability that have negligible significance for water supply or river base flow. They consist of deposits that naturally offer protection to any aquifers that may be present beneath.
Superficial Deposits: Kempton Park Gravel Member	Sands and Gravels	Secondary A Aquifer	Strata with permeable layers that can support local water supplies, and may form an important source of base flow to rivers.
Bedrock Deposits: London Clay Formation	Clay and Silt	Unproductive Strata	Geological strata with low permeability that have negligible significance for water supply or river base flow. They consist of deposits that naturally offer protection to any aquifers that may be present beneath.

The Site lies within an EA designated groundwater Source Protection Zone (SPZ) 2 (Outer Protection Zone).

The nearest active groundwater abstraction is located approximately 416m northeast of the Site and is for Pump & Treat: Pollution Remediation.

The Landmark Envirocheck report indicates a potential for groundwater flooding to occur at the surface, approximately 290m west of the Site.

3.1.6 Hydrology

The nearest surface water feature is Pymmes Brook, located approximately 760m southeast of the Site.

The nearest active groundwater abstraction is located approximately 416m northeast of the Site and is for Pump & Treat: Pollution Remediation.

The Site is predominantly within Flood Zone 1, which has a low probability of flooding; however, along the eastern and southern boundary of the Site, the Site lies within Flood Zone 2, which has a medium probability of flooding from rivers and the sea. Therefore, a Flood Risk Assessment is recommended for the Site.

There is a very low risk of flooding from rivers, the sea, and surface water at the Site. There is a risk of flooding from reservoirs in this area. Flooding from groundwater is unlikely in this area.

3.1.7 Sensitive Land Uses

The Site is located within a Nitrate Vulnerable Zone (NZV) for surface water.

3.1.8 Summary of Site Sensitivity

The Site is considered to be of low environmental sensitivity, based on the following key factors:

- The published geology indicates that the Site is underlain by variable thicknesses of Made Ground, overlying the Enfield Silt Member, overlying Kempton Park Gravel Member, overlying the London Clay Formation.
- The superficial deposits comprising the Enfield Silt Member and bedrock deposits are classified as Unproductive Strata. The superficial deposits comprising the Kempton Park Gravel Member are classified as Secondary A Aquifers.
- The Site lies within an EA designated groundwater SPZ 2.
- The Site is predominantly within Flood Zone 1, which has a low probability of flooding; however, along the eastern and southern boundary of the Site, the Site lies within Flood Zone 2, which has a medium probability of flooding from rivers and the sea. Therefore, a Flood Risk Assessment is recommended for the Site.
- The nearest surface water feature is Pymmes Brook, located approximately 760m southeast of the Site.
- The nearest active groundwater abstraction is located approximately 416m northeast of the Site and is for Pump & Treat: Pollution Remediation.
- The Site is located within a NVZ for surface water.

3.2 Environmental Regulatory Database Review

The following environmental data has been obtained from a Landmark Envirocheck Report (Annex B), which includes a search of databases held by regulatory bodies including the EA, BGS, the Department for the Environment, Food and Rural Affairs (DEFRA), City, District and Borough Councils and County Councils.

The table below summarises key features identified on-site and within the 500m search radius.

Table 3.3: Summary of Environmental Regulatory Database Review

Database	On-Site	0-500m	Description
Agency and Hydrological			
Local Authority Pollution Prevention and Controls	0	6	Morris Mirrors, 39m southeast, authorised for wood coating (PG6/33), dated 1 st October 2016. W S Jenkins, 195m west, authorised for manufacturing of coating materials (PG6/44), dated 15 th January 1998.

Database	On-Site	0-500m	Description
Pollution Incidents to Controlled Waters	0	2	Stamford Hill, 297m northeast, unknown oils into unknown receiving water, Category 2 – Significant Incident. Edmonton, 352m east, unknown soils into unknown receiving water, Category 3 – Minor Incident, dated 27 th May 1993.
Prosecutions Relating to Authorised Processes	0	1	Leeside Road, Tottenham, 454m east, charged with illegally burning and storing waste on land without a waste management license, guilty verdict, dated 25 th March 2003.
Substantiated Pollution Incident Register	0	1	67m north, dated 11 th February 2018, water impact: Category 1 – Major Incident, air impact: Category 3 – Minor Incident, pollutants include diesel, lubricating oils, and mixed waste oils.
Waste			
Licensed Waste Management Facilities	0	1	Redcorn, Brantwood Road, 120m northeast, issued 20 th January 2012, as a vehicle depollution facility.
Local Authority Landfill Coverage	1	0	London Borough of Enfield has supplied landfill data.
Registered Waste Transfer Sites	0	1	81 Garman Road, Tottenham, 498m east, dated 5 th August 1999, authorised waste includes inert waste, general non-putrescible waste, putrescible waste, and scrap metal.
Hazardous Substances			
Control of Major Accident Hazards Sites (COMAH)	0	2	Transco Plc, Willoughby Lane, Tottenham, 458m northeast, Lower Tier. National Grid Gas Plc, Tottenham Holder Station, Willoughby Lane, 492m northeast, Lower Tier.
Industrial Land Use			
Contemporary Trade Directory Entries	0	165	Of the 165 entries, 129 entries are inactive. Active entries include a footwear manufacturer and supplier, a clothing and fabric manufacturer, a leather garment supplier, a textile manufacturer, a brewer, a chemical manufacturer, a food product manufacturer, a polythene and plastic sheeting supplier, a car breaker and dismantler, and a scrap metal merchant.
Fuel Station Entries	0	1	Shell, 1-13 Willoughby Lane, Tottenham, 406m southeast.
Sensitive Land Use			
Nitrate Vulnerable Zones	1	0	Lee Nvz, onsite, surface water.

The Landmark Envirocheck Report indicates no hazard for compressible ground, ground dissolution, running sands, a very low hazard for collapsible ground, landslides, and a moderate hazard for the shrinking and swelling of clay at the Site. Mining, coal mining, and non coal mining areas were not identified at the Site.

3.3 History of the Site and the Surrounding Area

The history of development on the Site and immediate surrounding area was investigated with reference to historical Ordnance Survey (OS) mapping and aerial photographs. The findings are presented in subsequent sections below.

3.3.1 Historical Mapping

A summary of the development history of the Site and immediate surrounding area obtained from historic OS mapping and aerial photographs (Annex B) is detailed in the table below.

Table 3.4: Summary of Historical Mapping

Edition and Scale	On-Site Activities	Off-Site Activities (within ~ 250m)
1864-1881 (1:2,500)	The Site appeared as undeveloped land.	The surrounding area appeared relatively undeveloped with residential properties to the south and a farm approximately 200m northeast of the Site.
1896 (1:2,500)	No change.	Further residential properties and two nurseries were constructed south and west of the Site.
1920 (1:10,560)	No change.	Two engineering works facilities were constructed on the southern adjacent property and approximately 125m southwest of the Site.
1935-1936 (1:2,500)	The Site was developed to contain one building in the western portion of the Site, which extends onto the western adjacent property. One manufactory building and one box factory are constructed in the north-eastern portion of the Site and the south-eastern portion of the Site, respectively. Several small buildings were constructed in association with these two factories.	Several residential properties were constructed 200m north of the Site. Several commercial and industrial facilities were constructed to the north, south, east, and west of the Site. These facilities include electrical manufacturers, furniture manufacturers, shoe factory, radio works, marbolex products manufacturer, footwear manufacturer, chocolate manufacturer, automobile and sheet metal manufacturer, dress manufacturer, and engineering works
1955-1964 (1:1,250)	The two factory building were extended towards the central portion of the Site.	Several electricity substations were constructed around the Site.
1964-1975 (1:1,250)	The two factory buildings appeared to have been connected to each other, so one large warehouse building was present in the central portion of the Site.	The labels for the specific factories, manufacturers, and works facilities have been labelled as generic 'works' or 'factories'. Tanks were located approximately 125m northeast of the Site.
1977-1981 (1:1,250)	No change.	A police section house was constructed approximately 150m south of the Site. The commercial / industrial units directly to the east and south were demolished.
1991 (1:1,250)	No change.	A large building was constructed on the eastern adjoining property and was labelled as part of 'Hotspur Industrial Estate'. Several smaller buildings were constructed on the southern adjoining property and labelled as 'Royal London Estate'.

Edition and Scale	On-Site Activities	Off-Site Activities (within ~ 250m)
2013 (1:10,000)	No change.	No significant change.
2023 (1:10,000)	No change.	Small partial demolitions of commercial buildings to the north, east, and west occurred.

3.3.2 Summary of the History of the Site and Surrounding Area

Based on the information obtained by TRC, the history of the Site and surrounding area can be summarised as follows:

- From earliest available mapping (1864-1881), the Site appeared as undeveloped land. The Site was first developed by 1935-1936, containing one building in the western portion of the Site, one manufactory building in the north-eastern portion of the Site, and one box factory in the south-eastern portion of the Site. By 1955-1964, the buildings in the east were extended, and later combined by 1964-1975.
- The Site appeared in its current layout from 1964-1975.
- The surrounding area from earliest available mapping (1864-1881) was relatively undeveloped with residential properties situated to the south and a farm located 200m northeast of the Site. Several more residential properties were constructed to the south in the late 1800s, and commercial development began in the area by 1920, when two engineering works were constructed on the southern and eastern adjacent property. By 1930s, significant commercial and industrial development occurred to the north, south, east, and west of the Site. Several electricity substations and tanks were labelled on mapping by the 1970s. Since the large industrial boom of this area in the 1930s, only several minor developments have occurred since, including the demolition of the southern adjacent property into smaller buildings apart of 'Hotspur Industrial Estate' and partial demolitions of commercial buildings to the north, east, and west of the Site.

3.4 Planning Department Records

The Haringey Public Register planning portal was searched to appraise the history of planning applications for the Site. The database records show seven applications in the last 33 years. The following details were found:

- HGY/1989/1053 – Demolition of existing buildings and erection of 12 units for warehouse (B1) use and light industrial / office (B1), dated January 1990. Decision: Approved with Conditions.
- HGY/1992/0384 – Change of use from general industry (Class B2) to cash and carry warehouse (Class B8), dated July 1992. Decision: Approved with Conditions.
- HGY/2008/1649 – Erection of single storey infill warehouse extension, dated September 2008. Decision: Approved with Conditions.
- HGY/2009/1469 – Conversion of first floor offices to 5 x studio flats and alterations to road frontage elevation, dated October 2009. Decision: Refused.
- HGY/2011/0029 0 Partial demolition of existing single storey part of building and erection of single storey extension with loading / unloading canopy and conversion works to provide light industrial / office (Class B1) of existing first floor including alterations to front elevation and retention of existing sandwich bar kiosk, dated February 2011. Decision: Approved with Conditions.
- HGY/2015/1410 – Prior approval for change of use from B1 (office) to C3 (dwelling house), dated July 2015. Decision: Permitted Development.
- HGY/2018/3713 – Proposed extension of the dropped kerb to provide wider crossover, dated February 2019. Decision: Withdrawn.

3.5 Unexploded Ordnance (UXO) Records

Based on online UXO mapping available on the Zetica website the Site lies in an area of moderate to high risk of potential UXO.

In order to comply with the CDM Regulations (2015), further assessment is required to assess potential risks from UXO in accordance with the guidance given in CIRIA C681 prior to undertaking any intrusive investigation at the Site. This is to ensure the safety of those involved in the ground investigation.

As such, a Detailed UXO Risk Assessment was undertaken for the Site. The report can be summarised as follows:

- The Site appears to have undergone post-war development between 1952 and 1999, with a small extension connecting the two large industrial buildings in the southern section of the Site between 2006 and 2009. The risk is considered to be mitigated at the location and down to the depth of any post-war redevelopment onsite.
- There is an overall Low Risk from German anti-aircraft unexploded ordnance at the Site.
- There is an assessed Negligible Risk from Allied unexploded ordnance.

It is recommended that if works are to be undertaken at the Site, a UXO Risk Management Plan is carried out, and site-specific UXO Awareness Briefings are given to all personnel conducting intrusive works.

The Detailed UXO Risk Assessment is presented as Annex D.

4.0 Preliminary Environmental Risk Assessment

4.1 General

The methodology of this risk assessment uses the source-pathway-receptor contaminant linkage to provide a qualitative appraisal of environmental risks and potential liabilities associated with soil and groundwater contamination at the Site.

The initial conceptual site model (CSM) is prepared based on the current proposed development, which will comprise an industrial end use. Should proposals change then the CSM will need to be revisited.

4.2 Contamination Sources

Based on the information presented in this report the following sources of contamination have been identified.

Table 4.1: Summary of Potential Contamination Sources

Potential Sources	Potential Contaminants
Made Ground from previous phases of development	Metals, Polycyclic Aromatic Hydrocarbons (PAH) compounds, Total Petroleum Hydrocarbons (TPH), asbestos, ground gases
Historical operations at the Site e.g. Cardboard Box Manufacturer, Manufactory, Warehouse	Metals, PAH compounds, TPH, asbestos, Volatile Organic Compounds (VOC) and Semi Volatile Organic Compounds (SVOC)
Tanks and Electricity substations (within 50m southwest and northeast of the Site)	Metals, PAH compounds, TPH, VOCs, SVOCs, Polychlorinated Biphenyls (PCB)
Offsite commercial and industrial properties	Metals, PAH compounds, TPH, VOCs, SVOCs

4.3 Pathways

Based on the information presented in this report the following potentially active pathways have been identified.

- Dermal contact or ingestion with soil and groundwater
- Inhalation of soil dust or respirable fibres of asbestos
- Surface runoff
- Leaching of contaminants and vertical migration into groundwater
- Lateral migration of contaminants in groundwater
- Contact with buried services
- Migration of ground gas/organic vapour and ingress into buildings

4.4 Receptors

Based on the information presented in this report the following receptors have been identified.

- Future site users
- Neighbouring site users
- Construction and maintenance workers
- Construction materials
- Groundwater
- Surface waters

4.5 Initial Conceptual Site Model

Based on the information presented in this report the following potential contaminants linkages have been identified.

Table 4.2: Potential Contaminant Linkages

Source	Pathway	Receptor	Potential Contaminant Linkage
On-Site Sources			
Made Ground from previous phases of development Historical operations at the Site e.g. Cardboard Box Manufacturer, Manufactory, Warehouse Potential contaminants include: Metals, Polycyclic Aromatic Hydrocarbons (PAH) compounds, Total Petroleum Hydrocarbons (TPH), asbestos, VOCs, SVOCs, ground gases	Dermal contact, ingestion and inhalation pathways	Future site users	No It is likely that the Site will be covered by commercial buildings and hardstanding, which will minimise contact with potentially contaminated soils. Future Site users could still come into contact with potentially contaminated soils within any areas of soft landscaping. If landscaping is proposed, a cover system comprising clean soils will be required.
		Neighbouring residents/site users	Yes Neighbouring residents may be exposed to soil dust, particularly during the construction phase.
		Construction and maintenance workers	Yes Construction works will involve work in the ground.
	Surface runoff	Surface water (Pymmes Brook, located approximately 760m southeast of the Site)	No The Site is relatively level and runoff is unlikely to reach the Pymmes Brook, located approximately 760m southeast of the Site.

Source	Pathway	Receptor	Potential Contaminant Linkage
	Leaching of contaminants and vertical migration into groundwater	Groundwater	No The Site is underlain by Unproductive Strata.
	Lateral migration of contaminants in groundwater	Surface water (Pymmes Brook)	No Low permeability soils are anticipated, and these are unlikely to be in hydraulic connection with surface water in Pymmes Brook.
	Contact with buried services	Buried services	Yes New below ground services are likely to be proposed.
	Migration of ground gas/organic vapour and ingress into buildings	Future site users	Yes New development is proposed and ground gas and vapours can enter and accumulate in new buildings.
		Construction workers	Yes Ground gas and vapours could accumulate in excavations during construction.
Active Off-Site Sources			
Tanks and Electricity substations (within 50m southwest and northeast of the Site)	Dermal contact, ingestion and inhalation pathways	Future site users	No Probable commercial end use with hardstanding across most of the Site.
Offsite commercial and industrial properties		Construction workers	Yes Construction works will involve work in the ground.
Potential contaminants include: Metals, PAH compounds, TPH, VOCs, SVOCs, Polychlorinated Biphenyls (PCB)			

4.6 Other Property Related Environmental Issues

Table 4.3: Summary of Other Potential Environmental Issues

Issue	Detail
Coal Mining	Coal Authority records indicate that the Site is not located in an area that is affected by coal mining.
Radon	BGS records indicate that the Site is in a lower probability radon area where less than 1% of homes are estimated to be at or above the Action Level. On this basis, the BGS states that “no radon protective measures are necessary in the construction of new dwellings or extensions”.
Flood Risk	The Site is predominantly within Flood Zone 1, which has a low probability of flooding; however, along the eastern and southern boundary of the Site, the Site lies within Flood Zone 2, which has a medium probability of flooding from rivers and the sea. Therefore, a Flood Risk Assessment is recommended for the Site.
Asbestos Containing Materials	Due to the presence of Made Ground at the Site, the presence of asbestos in soil and / or ACM cannot be discounted. An asbestos survey was not conducted as part of this scope of works. Prior to demolition, an asbestos survey should be undertaken.
UXO Risk	The Site is in an area affected by historical UXO risk; as such, a Detailed UXO Risk Assessment was carried out for the Site. The Detailed UXO Risk Assessment classified the Site as a Low Risk for German anti-aircraft unexploded ordnance and a Negligible Risk for Allied unexploded ordnance. The risk assessment recommends that a UXO Risk Management Plan and site-specific UXO Awareness Briefings are given to all personnel conducting intrusive groundworks.

5.0 Preliminary Geotechnical Hazards Assessment

Based on the available information presented in the preceding sections, the anticipated geotechnical hazards associated with the Site are summarised in the table below.

Table 5.1: Summary of Geotechnical Hazards

Hazard	Distance	Description
Made Ground	On-Site	The available information indicates that the Site underwent several stages of commercial development. Therefore, some Made Ground is anticipated in the areas of past development. The Made Ground has high variability and poor engineering properties. Consequently, unless adequately treated, the Made Ground is not considered a suitable founding stratum.
Buried Obstructions	On-Site	There is some potential of buried obstructions within the Made Ground associated with past developments such as relict foundations, old basements, underground tanks etc. Also, the potential presence of large gravels and cobbles within the Made Ground or claystones within London Clay Formation cannot be ruled out at this stage. Buried obstructions may delay construction operations and will require consideration for the selection of appropriate equipment.
Buried Concrete	On-Site	London Clay Formation and materials derived from it can naturally contain elevated concentrations of minerals that can be aggressive to buried concrete. Made Ground and superficial deposits should also be checked in that regard.
Volume Change Potential	On-Site	The cohesive strata of London Clay Formation, will likely exhibit volume change potential when subject to moisture content changes. The volume change potential characteristics should be investigated and assessed to inform the design of foundations.
Party Walls	Western Site Boundary	The neighbouring property might share a party wall with the subject site towards west; however, this was inaccessible at the time of the walkover. Any impact of the proposed development on the neighbouring property should be assessed. Discussions with the neighbouring property owner via a party wall agreement will be required prior to finalising the design.

Hazard	Distance	Description
Shallow Groundwater Level	On-Site	Shallower perched groundwater within Made Ground and superficial deposits cannot be ruled out at this preliminary stage. Shallow groundwater, if present, will require management during construction, including dewatering, in relation to maintaining stability of proposed excavations and facilitating construction activities in dry conditions.
Settlement Prone Natural Soils	On-Site	Aeolian derived deposits of Enfield Silt Member are indicated to underlie the Site. Such aeolian derived deposits often exist in a loose / soft state which can lead to significant short and long term settlement effects that could impact the proposed development if not appropriately dealt with.
Running Sand	On-Site	Running sand phenomena during excavations within Kempton Park Gravel Member cannot be ruled out especially if these deposits exist on-site in a loose state and are affected by the presence of shallow groundwater.
UXO	On-Site	The Site is in an area affected by historical UXO risk; as such, a Detailed UXO Risk Assessment was carried out for the Site. The Detailed UXO Risk Assessment classified the Site as a Low Risk for German anti-aircraft unexploded ordnance and a Negligible Risk for Allied unexploded ordnance. The risk assessment recommends that a UXO Risk Management Plan and site-specific UXO Awareness Briefings are given to all personnel conducting intrusive groundworks.

6.0 Summary and Conclusions

6.1 Findings

From earliest available mapping (1864-1881), the Site appeared as undeveloped land. The Site was first developed by 1935-1936, containing one building in the western portion of the Site, one manufactory building in the north-eastern portion of the Site, and one box factory in the south-eastern portion of the Site. By 1955-1964, the buildings in the east were extended, and later combined by 1964-1975. The Site appeared in its current layout from 1964-1975.

The published geology indicates that the Site is underlain by variable thicknesses of Made Ground, overlying the Enfield Silt Member, overlying the London Clay Formation. The Enfield Silt Member and London Clay Formation are classified as Unproductive Strata.

The Site lies within an EA designated groundwater SPZ 2.

The Site is predominantly within Flood Zone 1, which has a low probability of flooding; however, along the eastern and southern boundaries of the Site, the Site lies within Flood Zone 2, which has a medium probability of flooding from rivers and the sea.

The nearest active groundwater abstraction is located approximately 416m northeast of the Site and is for Pump & Treat: Pollution Remediation.

The Site is located within a NVZ for surface water.

6.2 Summary of Environmental Risk

Based on this assessment, it is considered that the former land uses could have potentially impacted the underlying soil and groundwater conditions. Specifically, the Cardboard Box Manufacturer, Manufactory, and Warehouse facilities at the Site.

A proposed development plan was not provided to TRC at the time of writing this assessment; however, It is presumed that the proposed development will comprise a mixed industrial and commercial end use and ground cover will be predominantly buildings and hardstanding with peripheral areas of soft landscaping only.

The building footprints and hardstanding will minimise the potential for direct contact with potential contamination by future site users. However, this is a potential for exposure in the proposed areas of soft landscaping. Furthermore, ground gases and organic vapours could enter and accumulate in new buildings.

Construction and maintenance works and neighbouring site users could come into contact with contaminated soils and soil dust during the construction phase.

The published geology is of the Enfield Silt Member (Unproductive Strata), over the Kempton Park Gravel Member (Secondary A Aquifer), over the London Clay Formation (Unproductive Strata). The superficial aquifer and bedrock aquifer are confined, and therefore not considered to be sensitive to mobile contamination. Although the Site does lie within a Source Protection Zone 2 (Outer Zone), this is related to the surrounding Secondary A Aquifer.

The nearest surface water feature is Pymmes Brook, located approximately 760m southeast of the Site. Pymmes Brook is not considered to be in hydraulic continuity with groundwater in the superficial deposits or underlying bedrock aquifer. Surface water is therefore not considered to be sensitive to contamination, and it is considered that contamination migration in groundwater impacting surface water receptors is unlikely.

6.3 Summary of Geotechnical Hazards

Based on the available information for the Site a number of potential geotechnical hazards are anticipated associated with the proposed development. These are Made Ground, buried obstructions, ground's aggressiveness to buried concrete, volume change potential soils, settlement prone natural soils, running sands, party walls, shallow groundwater, historical UXO.

These potential geotechnical hazards should be investigated and further assessed as discussed in the following section.

7.0 Recommendations for Further Work

In light of the desk study findings, TRC recommends a Tier 2 (formerly known as a phase 2) intrusive ground investigation to further appraise underlying soil and groundwater quality and assess ground gas conditions. This is likely to be a requirement of planning consent. The investigation should focus on the potential sources identified as part of this assessment. This will aim to address any risks to the identified receptors.

A detailed investigation with geotechnical testing is required to confirm the underlying geology, groundwater regime and engineering properties of the underlying soils. The ground investigation should be designed and assessed based on the requirements of BS5930:2015, Eurocode 7 Part 2 (and the associated National Annex). The investigation and assessment should be tailored to ensure that the geotechnical hazards, discussed in this report are addressed and appropriate mitigation measures are proposed to inform the structural and civils design.

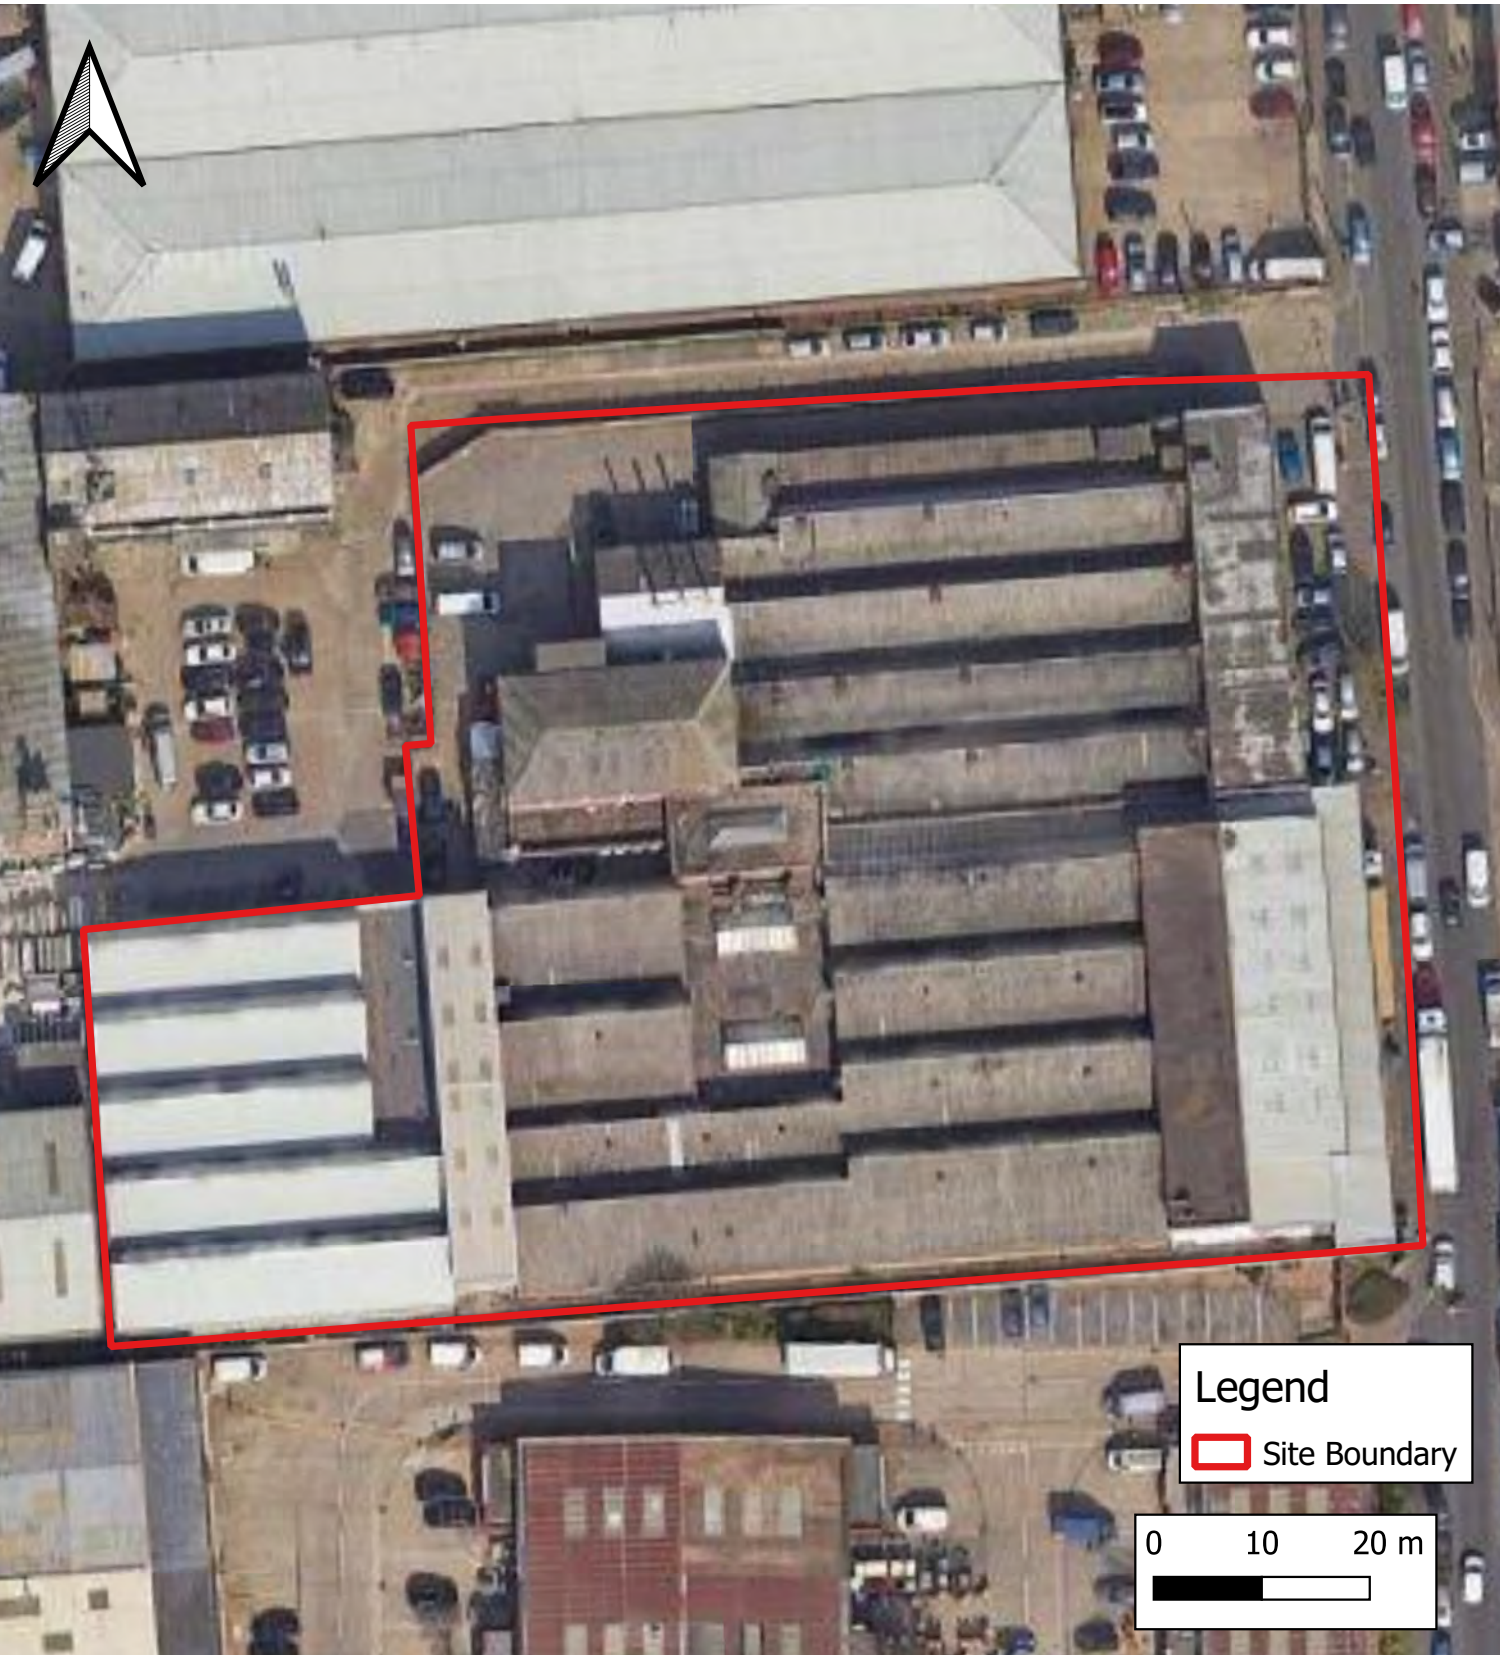

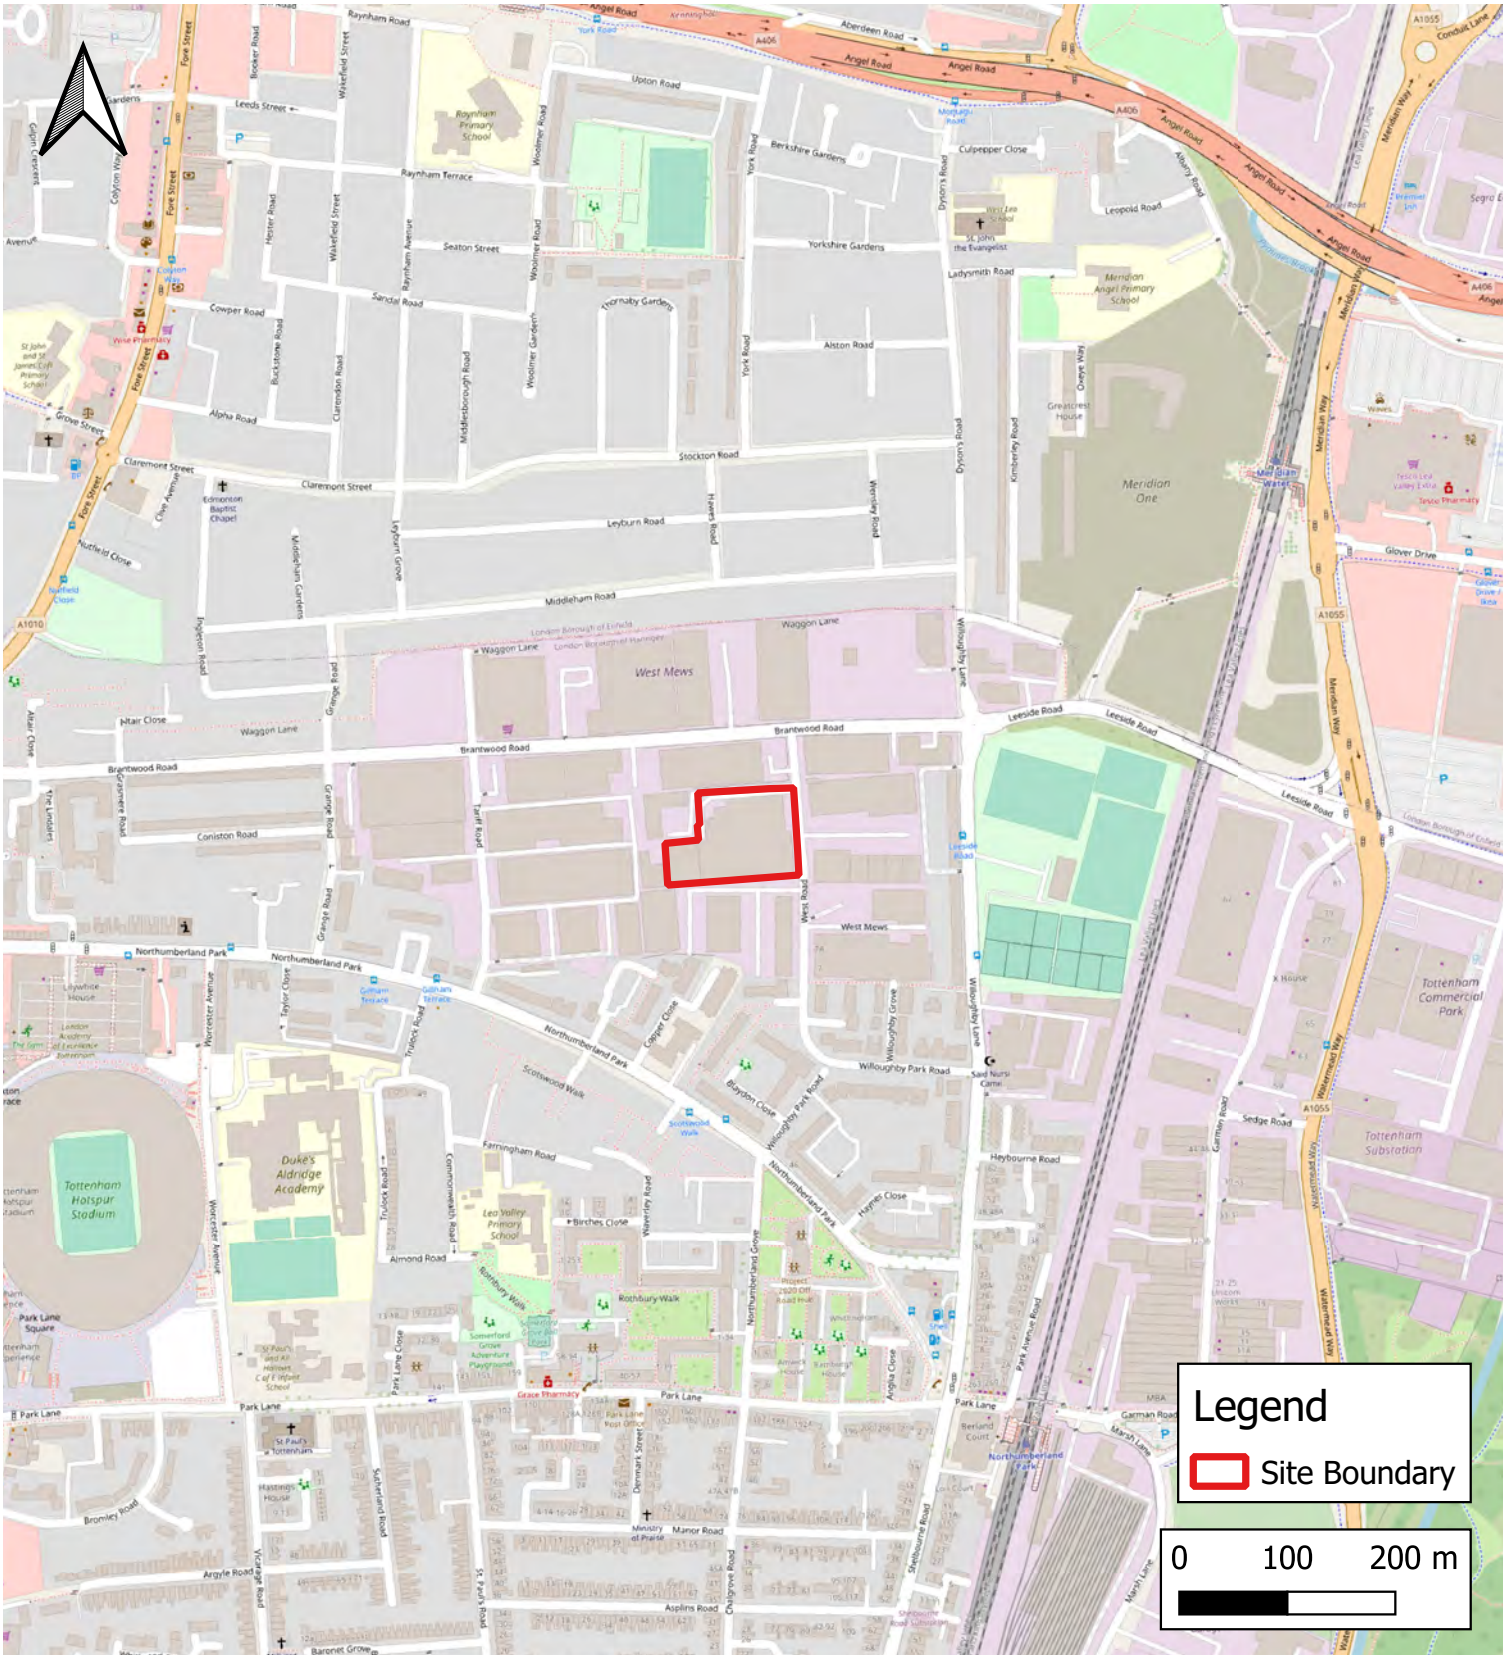

A Geotechnical Design Report may need to be prepared at a later stage in accordance with Eurocode 7, once the ground investigation and assessment have been completed and the final scheme details are known.

The Site is in an area affected by historical UXO risk; as such, a Detailed UXO Risk Assessment was carried out for the Site. The Detailed UXO Risk Assessment classified the Site as a Low Risk for German anti-aircraft unexploded ordnance and a Negligible Risk for Allied unexploded ordnance. The risk assessment recommends that a UXO Risk Management Plan and site-specific UXO Awareness Briefings are given to all personnel conducting intrusive groundworks.

Given the age of the building, an asbestos survey is recommended for the Site prior to presumed demolition.

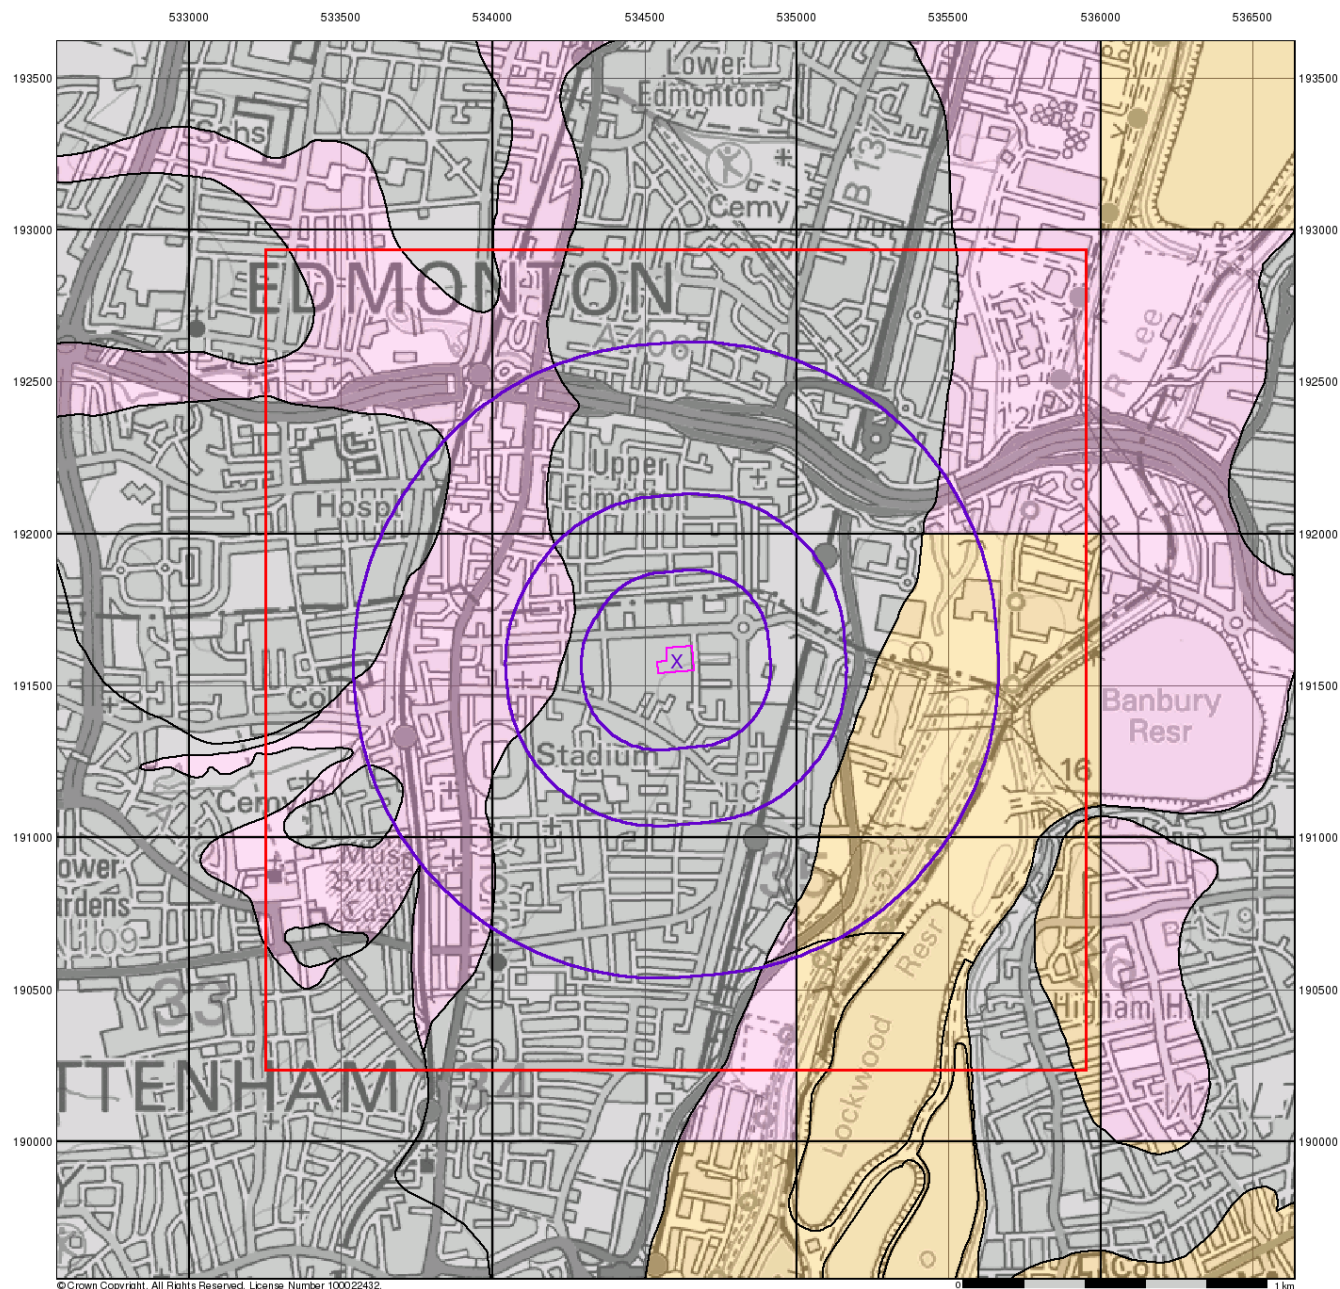

The Site is predominantly within Flood Zone 1, which has a low probability of flooding; however, along the eastern and southern boundary of the Site, the Site lies within Flood Zone 2, which has a medium probability of flooding from rivers and the sea. Therefore, a Flood Risk Assessment is recommended for the Site.

Introduction

The Environment Act 1995 has made site sensitivity a key issue, as the legislation pays as much attention to the pathways by which contamination could spread, and to the vulnerable targets of contamination, as it does the potential sources of contamination. For this reason, Landmark's Site Sensitivity maps and Datasheet(s) place great emphasis on statutory data provided by the Environment Agency/Natural Resources Wales and the Scottish Environment Protection Agency; it also incorporates data from Natural England (and the Scottish and Welsh equivalents) and Local Authorities; and highlights hydrogeological features required by environmental and geotechnical consultants. It does not include any information concerning past uses of land. The datasheet is produced by querying the Landmark database to a distance defined by the client from a site boundary provided by the client. In this datasheet the National Grid References (NGRs) are rounded to the nearest 10m in accordance with Landmark's agreements with a number of Data Suppliers.

Published 1868 - 1873

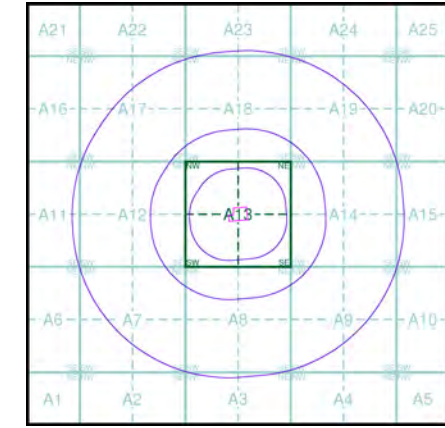

Source map scale - 1:10,560

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840's. In 1854 the 1:2,500 scale was adopted for mapping urban areas; these maps were used to update the 1:10,560 maps. The published date given therefore is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas. In the late 1940's, a Provisional Edition was produced, which updated the 1:10,560 mapping from a number of sources. The maps appear unfinished - with all military camps and other strategic sites removed. These maps were initially overprinted with the National Grid. In 1970, the first 1:10,000 maps were produced using the Transverse Mercator Projection. The revision process continued until recently, with new editions appearing every 10 years or so for urban areas.
