1.0 Introduction

Potter Raper is working alongside Wates to facilitate the capital works on properties, on behalf of Clarion Housing. This design and access statement will support the planning application for the refurbishment of 8 Willingdon Road, Haringey, London N22 6SB

2.0 Planning Restrictions

2.1 Conservation and Heritage

The application site is located at 8 Willingdon Road within the administrative boundary of the London Borough of Haringey.

The property is not located within a designated Conservation Area and is not statutorily or locally listed.

The surrounding area is characterised by predominantly residential development comprising late Victorian and Edwardian terraced housing. Whilst the area does not benefit from formal heritage designation, many properties retain traditional architectural features including projecting bay windows, decorative stucco detailing, brick façades and pitched tiled roofs, contributing to a consistent and recognisable residential streetscape.

As the site is not subject to heritage constraints, the proposed works have been designed to maintain the general character and appearance of the property whilst improving thermal performance, security and long-term durability.

London Borough of Haringey's interactive conservation area map

2.2 Listing

The building is not listed, either locally or by statute, as indicated by the red marker, from the following map identifying the latter, taken from Historic England's Website:

Historic England's Interactive Listed Building Map

2.3 Flood Risk Assessment

The property has been identified as being located in zone 1, as indicated by the red marker on the gov.uk interactive flood map below. This zone is deemed to be of a low flood risk area, and flood risk does not have a significant bearing on the content of the application.

Gov.UK Interactive Flood Map

3.0 Existing Building

3.1 Location

The property is situated at 8 Willingdon Road within the Wood Green area of the London Borough of Haringey.

12235 – 8 WILLINGDON ROAD

D&A/HERITAGE/PLANNING STATEMENT

Willingdon Road is a well-established residential street characterised by traditional two-storey terraced properties of similar scale and architectural appearance. The property benefits from convenient access to local amenities including shops, cafés, schools and community facilities located along Lordship Lane and Wood Green High Road. Public open space is available nearby at Lordship Recreation Ground and Bruce Castle Park, providing recreational facilities and green space for local residents.

The area benefits from good public transport accessibility, with nearby bus routes and Underground services available from Turnpike Lane and Wood Green stations, providing convenient connections throughout Haringey and Central London.

3.2 Building Description

The application property comprises a traditional two-storey mid-terraced dwelling constructed in traditional brickwork, which has been converted into two self-contained apartments A & B.

The principal elevation incorporates projecting bay windows at both ground and first-floor level, finished with a flat roof incorporating a GRP-style roof covering. The windows and principal entrance doorway are framed by decorative cream/off-white stucco surrounds, which provide architectural emphasis and contribute to the character of the front elevation.

The principal roof is pitched, to the rear, the property incorporates a two-storey lean-to addition beneath a pitched roof, both roofs are finished with matching Redland 49 concrete roof tiles.

The existing front elevation windows comprise traditional timber single-glazed vertical sliding sash windows together with a smaller first-floor window. The existing principal entrance door is of traditional timber construction comprising three obscured glazed arched panes over two vertical obscured glazed panes above three solid timber panels, together with a fixed obscured single-glazed fanlight.

To the rear elevation, the property contains a mixture of traditional timber single-glazed sliding sash and timber casement windows.

The property is set behind a small enclosed front garden bounded by low walls and a pedestrian gate and also benefits from a private enclosed rear garden.

Front Elevation (North West)

Rear Elevation (South East)

3.3 Existing features subject to proposals

3.3.1 Existing Windows (with Photos)

The existing windows to the front elevation consist of timber single-glazed sliding sash windows. The existing windows to the rear elevation consist of a mixture of timber single-glazed sliding sash and casement windows. By virtue of their age and deterioration over many years, the existing timber windows are in poor condition, and perform very poorly thermally, losing a significant amount of heat.

Front Ground Floor Bay Window

Front First Floor Bay Window

Front First Floor Bay Window

Rear Ground Floor Window

Rear First Floor Window

Rear Side Ground Floor Window

Rear Side First Floor Window

Rear End Ground Floor Window

Rear End First Floor Window

3.3.2 Existing Door (with Photos)

The existing main entrance timber single-glazed obscured glass door consists of three arched panes, over two vertical panes, over three solid panels.

By virtue of its age and deterioration over many years, the existing timber door is in poor condition, and performs very poorly thermally, losing a significant amount of heat.

Front Main Entrance Door

The door above is summarised below:

Existing Doors:	Material	Colour	Door Glazing	Adjoining Windows
Front Main Entrance Door (ground floor)	Timber	Blue	Three single-glazed arched panes over two single-glazed vertical panes over three solid panels	Single-glazed fixed fanlight

4.0 Design Proposals

4.1 Proposed Windows

The existing timber windows throughout the property have deteriorated over time and no longer adequately meet the needs of the residents. The timber windows are in poor overall condition and are contributing to issues including heat loss, condensation, reduced thermal efficiency, security concerns and other defects associated with ageing and deteriorated fenestration.

As a result, the client proposes to replace all existing windows throughout the property with new double-glazed uPVC windows in order to improve the overall condition, performance, comfort and security of the building.

Please see below summary regarding the windows proposed to be installed:

Proposed Windows Details	
Frame Material (Front):	uPVC
Glazing Thickness (Front):	28mm (Maximum)
Frame Material (Rear/Side):	uPVC
Glazing Thickness (Rear/Side):	28mm (Maximum)
Glazing Bars (Front):	Remove
Glazing Bars (Rear/Side):	Remove
Ironmongery finish:	As Client's requirements
Frame depth:	To match existing
Obscure glazing:	Yes – only where existing
Toughened Glass:	As required by building regulations

4.2 Proposed Door Replacement

The existing timber front main entrance door to the property has deteriorated over time and no longer adequately meet the needs of the residents. The timber door is in poor overall condition and is contributing to issues including heat loss, condensation, reduced thermal efficiency, security concerns and other defects associated with ageing and deteriorated fenestration.

As a result, the client proposes to replace the existing timber main entrance door to the property with a new updated double-glazed composite door in order to improve the overall condition, performance, comfort and security of the building.

Please see below summary regarding the door proposed to be installed:

Proposed Doors:	Material	Colour	Door Glazing	Adjoining Windows
Front Main Entrance Door (ground floor)	Composite	TBC	One double-glazed pane over two solid panels	Double-glazed fixed fanlight

5.0 Heritage Impact

5.1 Heritage Introduction

Although 8 Willingdon Road is not a listed building or locally listed and does not fall within a designated conservation area, it forms part of the well-established residential fabric of Haringey. The surrounding streets are characterised by late Victorian and early Edwardian terraced and semi-detached housing, reflecting the area's nineteenth century suburban expansion linked to the development of the area. The property contributes to the consistent architectural rhythm of the terrace and urban grain typical of this period, with its traditional brick elevations and defined roof lines. While the site does not possess individual heritage designation, it nonetheless holds contextual value as part of Haringey's broader townscape, which remains largely intact and representative of the borough's historic growth. However, as the building is subdivided into two self-contained apartments, it does not benefit from permitted development rights.

5.2 Heritage Impact

The property is a mid-terraced dwelling, situated outside any conservation area and not forming part of a designated heritage asset. Many of the neighbouring properties already feature new updated uPVC double glazing windows and composite doors of similar and other variable styles, forming a precedent on the road for this design style.

As such, the proposed replacement of existing single-glazed timber windows and main entrance timber door with new double-glazed uPVC windows and composite door, is considered to have no adverse impact on the architectural or significance of the property or the surrounding area. The works are sympathetic in scale, design, and material, and maintain the visual consistency of the street while improving energy efficiency and functionality.

6.0 Social/Economic benefits

The proposals will achieve social and economic benefits for the residents of the apartments proposed for refurbishment. The social benefits will include improved living conditions for residents, who will benefit from improved thermal comfort and reduction of damp and mould/condensation risk. The economic benefits will come in the form of reduced energy bills for the residents of the units, as well as the business generated through the client's supply chain.

7.0 Access

7.1 Car Parking

The property does not benefit from dedicated off-street parking and relies upon on-street parking available along Woodside Gardens and neighbouring residential streets.

Parking within the area is managed through the London Borough of Haringey's Controlled Parking Zone arrangements.

As the proposal relates solely to the replacement of the existing front entrance door, no increase in occupancy or change of use is proposed. Consequently, there will be no increase in parking demand and the proposal will have no impact upon existing parking provision.

7.2 Transport

The site benefits from good accessibility to public transport.

The nearest London Underground station is Turnpike Lane Station, approximately one kilometre from the property, providing services on the Piccadilly Line.

Additional Underground and National Rail services are available from Seven Sisters Station, whilst numerous bus routes operate along nearby West Green Road and Tottenham High Road providing connections throughout Haringey and Central London.

As the proposal is limited to the replacement of the existing front entrance door, there will be no additional transport demand or impact upon the local highway network.

8.0 Refuse Strategy and Disposal

8.1 Refuse Strategy

The existing refuse arrangements for the property remain unaffected by the proposals.

8.2 Waste

All refuse which arises from the replacement windows and door will be carefully removed from site and disposed of in line with the building contractor's waste management plan.

9.0 Sustainable Design and Construction Statement

Policy S1: Delivering Sustainable Design

The proposals included within this application aim to improve the sustainability of the host buildings, and as such are in line with the council's plan to deliver sustainable design.

Policy S2: Sustainable Design and Construction

The proposals included within this application are in the interest of improving the thermal performance of the building, whilst taking into account the character of the building and leaseholder preferences

Policy S3: Sustainable Design Standards

The development proposals are not relevant to any design standard, however building control compliance will be obtained by virtue of a FENSA certificate.

Policy S4: Minimising greenhouse gas emissions

The proposals aim to reduce the energy consumption of the property and as such align with this policy.

Policy S5: Energy Infrastructure

Not relevant to the application.

Policy S6: Managing heat risk

Not relevant to the application.

Policy S7: Improving Air Quality

Not relevant to the application.

Policy S8: Flood Risk Management

Not relevant to the application.

Policy S9: Integrated Water Management and Sustainable Drainage

Not relevant to the application.

Policy S10: Circular Economy and Adaptive Design

Not relevant to the application.

10.0 Planning Fire Safety Statement (PFSS) for London Plan Policy D12

Information on space provisions for fire appliances and assembly points (criteria 1).

- a) The subject property is a converted mid-terrace house, subdivided into two self-contained apartments, consisting of two storeys, which can be accessed via the road by the fire service. There is no change proposed to the existing arrangements.
- b) The assembly point for an evacuation of this building would be directly outside on the street (public realm).

Information on passive and active safety measures (criteria 2)

The subject property is a converted mid-terrace house, subdivided into two self-contained apartments, consisting of two storeys, which we are only proposing to replace the windows and door. These passive and active fire safety measures will remain as existing and are not relevant to the application.

Information and data on construction products and materials (criteria 3)

The subject property is a converted mid-terrace house, subdivided into two self-contained apartments, consisting of two storeys, which we are only proposing to replace the windows and door. The fire risk relating to products and materials choices is not relevant. Window frames and glass are included in the exemptions list under the materials and workmanship (regulation 7) paragraph (3) Item (j).

Information on means of escape and evacuation strategy (criteria 4)

The subject property is a converted mid-terrace house, subdivided into two self-contained apartments, consisting of two storeys, which we are only proposing to replace the windows and door. The existing means of escape and evacuation strategy will remain the same. The front entrance door will be controlled by a thumb-turn internally to allow for evacuation in the event of a fire.

Information on access and equipment for firefighting (criteria 6).

The subject property is a converted mid-terrace house, subdivided into two self-contained apartments, consisting of two storeys, which we are only proposing to replace the windows and door. This item is not relevant the application.

11.0 Summary

This application includes replacement of the existing timber windows and door, these works will improve the security, condition, and thermal performance of the property and has been carefully planned.
