1.0 Introduction

Potter Raper is working alongside Wates to facilitate the capital works on properties, on behalf of Clarion Housing. This design and access statement will support the planning application for the refurbishment of 30 Elmhurst Road, Haringey, London N17 6RQ.

2.0 Planning Restrictions

2.1 Conservation and Heritage

The application site is located at 30 Elmhurst Road within the administrative boundary of the London Borough of Haringey.

The property is not located within a designated Conservation Area and is neither statutorily nor locally listed.

The surrounding area is characterised by predominantly late Victorian and Edwardian residential development comprising traditional terraced and semi-detached housing. Many properties retain characteristic architectural features including traditional brick façades, pitched slate roofs, projecting gables and vertically proportioned windows, creating a consistent and well-established residential streetscape.

As the site is not subject to heritage constraints, the proposed replacement windows have been designed to maintain the general character and appearance of the property whilst significantly improving thermal performance, energy efficiency and long-term durability.

London Borough of Haringey's interactive conservation area map

2.2 Listing

The building is not listed, either locally or by statute, as indicated by the red marker, from the following map identifying the latter, taken from Historic England's Website:

Historic England's Interactive Listed Building Map

2.3 Flood Risk Assessment

The property has been identified as being located in zone 1, as indicated by the red marker on the gov.uk interactive flood map below. This zone is deemed to be of a low flood risk area, and flood risk does not have a significant bearing on the content of the application.

Gov.UK Interactive Flood Map

3.0 Existing Building

3.1 Location

The property is situated at 30 Elmhurst Road within the Tottenham area of the London Borough of Haringey.

Elmhurst Road is a well-established residential street comprising predominantly traditional terraced and semi-detached housing of a similar scale and appearance. The property benefits from convenient access to local amenities including

12235 – 30 ELMHURST ROAD

D&A/HERITAGE/PLANNING STATEMENT

shops, cafés, schools and community facilities located along nearby West Green Road and Tottenham High Road. Local open spaces, including Downhills Park and Lordship Recreation Ground, are within easy reach and provide recreational facilities and green space for local residents.

The area is well served by public transport, with nearby bus routes and Underground services available from Turnpike Lane and Seven Sisters stations, providing convenient access throughout Haringey and Central London.

3.2 Building Description

The application property comprises a traditional two storey semi-detached dwelling constructed in brickwork with a painted red finish and white stucco detailing surrounding the windows and main entrance door. The property has been divided into two self-contained residential apartments A and B.

The principal roof is of pitched form and is finished with slate tiles. The front elevation incorporates a projecting two-storey gabled bay which extends from the principal elevation and forms a prominent architectural feature of the building.

To the rear, the property incorporates a two storey lean-to addition beneath a pitched roof finished with roof tiles.

The principal entrance is recessed within the front elevation and is accessed through a small enclosed front garden bounded by low boundary walls separating the property from the public footpath and adjoining properties.

The existing front elevation windows comprise traditional timber single-glazed vertical sliding sash windows. To the rear and side elevations, the property contains a mixture of timber single-glazed casement windows together with a timber rear exit door.

The property also benefits from a private enclosed rear garden.

Overall, the building retains its traditional proportions and architectural character, making a positive contribution to the surrounding residential streetscape.

Front Elevation (North West)

Rear Elevation (South East)

3.3 Existing features subject to proposals

3.3.1 Existing Windows (with Photos)

The existing windows to the front elevation consist of timber single-glazed sliding sash windows. The existing windows to the rear elevation consist of a mix of timber casement windows (no images available).

By virtue of their age and deterioration over many years, the existing timber windows are in poor condition, and perform very poorly thermally, losing a significant amount of heat.

4.0 Design Proposals

4.1 Proposed Windows

The existing timber windows throughout the property have deteriorated over time and no longer adequately meet the needs of the residents. The timber windows are in poor overall condition and are contributing to issues including heat loss, condensation, reduced thermal efficiency, security concerns and other defects associated with ageing and deteriorated fenestration.

As a result, the client proposes to replace all existing timber windows throughout the property with new double-glazed uPVC windows in order to improve the overall condition, performance, comfort and security of the building.

Please see below summary regarding the windows proposed to be installed:

Proposed Windows Details	
Frame Material (Front):	uPVC
Glazing Thickness (Front):	28mm (Maximum)
Frame Material (Rear/Side):	uPVC
Glazing Thickness (Rear/Side):	28mm (Maximum)
Glazing Bars (Front):	N/A
Glazing Bars (Rear/Side):	N/A
Ironmongery finish:	As Client's requirements
Frame depth:	To match existing
Obscure glazing:	Yes – only where existing
Toughened Glass:	As required by building regulations

5.0 Heritage Impact

5.1 Heritage Introduction

Although 30 Elmhurst Road is not a listed building, locally listed and does not fall within a designated conservation area, it forms part of the well-established residential fabric of Haringey. The surrounding streets are characterised by late Victorian and early Edwardian terraced and semi-detached housing, reflecting the area's nineteenth century suburban expansion linked to the development of the area. The property contributes to the consistent architectural rhythm of the terrace and urban grain typical of this period, with its traditional brick elevations and defined roof lines. While the site does not possess individual heritage designation, it nonetheless holds contextual value as part of Haringey's broader townscape, which remains largely intact and representative of the borough's historic growth. However, as the building is subdivided into two self-contained apartments, it does not benefit from permitted development rights.

5.2 Heritage Impact

The property is a mid-terrace dwelling subdivided into two self-contained apartments, situated outside any conservation area and not forming part of a designated heritage asset. As such, the proposed replacement of existing timber windows with new double-glazed uPVC windows is considered to have no adverse impact on the architectural or significance of the property or the surrounding area. The works are sympathetic in scale, design, and material and maintains the visual consistency of the terrace while improving energy efficiency and functionality.

6.0 Social/Economic benefits

The proposed works will provide a number of social and economic benefits through the replacement of the existing inefficient single-glazed windows with modern double-glazed units. The improvements will enhance the thermal performance of the property, contributing to improved energy efficiency, reduced heat loss and lower carbon emissions, whilst providing a more comfortable internal environment for the occupants. The use of durable, high-quality replacement materials will also reduce future maintenance requirements, extend the serviceable life of the building and support its long-term sustainability without altering its established residential use or character.

7.0 Access

7.1 Car Parking

The property does not benefit from dedicated off-street parking and relies upon existing on-street parking provision available along Elmhurst Road and surrounding residential streets.

As the proposal relates solely to the replacement of existing windows, with no alteration to the use or occupancy of the property, there will be no increase in parking demand.

7.2 Transport

The property benefits from good public transport accessibility.

Nearby transport connections include Turnpike Lane Underground Station and Seven Sisters Station, together with numerous bus routes operating along West Green Road and Tottenham High Road, providing convenient access throughout Haringey and Central London.

As the proposal is limited to the replacement of existing windows, there will be no additional transport demand or impact upon the local highway network.

8.0 Refuse Strategy and Disposal

8.1 Refuse Strategy

The existing refuse arrangements for the property remain unaffected by the proposals.

8.2 Waste

All refuse which arises from the replacement windows will be carefully removed from site and disposed of in line with the building contractor's waste management plan.

9.0 Sustainable Design and Construction Statement

Policy S1: Delivering Sustainable Design

The proposals included within this application aim to improve the sustainability of the host buildings, and as such are in line with the council's plan to deliver sustainable design.

Policy S2: Sustainable Design and Construction

The proposals included within this application are in the interest of improving the thermal performance of the building, whilst taking into account the character of the building and leaseholder preferences

Policy S3: Sustainable Design Standards

The development proposals are not relevant to any design standard, however building control compliance will be obtained by virtue of a FENSA certificate.

Policy S4: Minimising greenhouse gas emissions

The proposals aim to reduce the energy consumption of the property and as such align with this policy.

Policy S5: Energy Infrastructure

Not relevant to the application.

Policy S6: Managing heat risk

Not relevant to the application.

Policy S7: Improving Air Quality

Not relevant to the application.

Policy S8: Flood Risk Management

Not relevant to the application.

Policy S9: Integrated Water Management and Sustainable Drainage

Not relevant to the application.

Policy S10: Circular Economy and Adaptive Design

Not relevant to the application.

10.0 Planning Fire Safety Statement (PFSS) for London Plan Policy D12

Information on space provisions for fire appliances and assembly points (criteria 1).

- a) The subject property is a converted mid-terrace house, subdivided into two self-contained apartments, consisting of two storeys, which can be accessed via the road by the fire service. There is no change proposed to the existing arrangements.
- b) The assembly point for an evacuation of this building would be directly outside on the street (public realm).

Information on passive and active safety measures (criteria 2)

The subject property is a converted mid-terrace house, subdivided into two self-contained apartments, consisting of two storeys, which we are only proposing to replace the windows. These passive and active fire safety measures will remain as existing and are not relevant to the application.

Information and data on construction products and materials (criteria 3)

The subject property is a converted mid-terrace house, subdivided into two self-contained apartments, consisting of two storeys, which we are only proposing to replace the windows. The fire risk relating to products and materials choices is not relevant. Window frames and glass are included in the exemptions list under the materials and workmanship (regulation 7) paragraph (3) Item (j).

Information on means of escape and evacuation strategy (criteria 4)

The subject property is a converted mid-terrace house, subdivided into two self-contained apartments, consisting of two storeys, which we are only proposing to replace the windows. The existing means of escape and evacuation strategy will remain the same. The front entrance door will be controlled by a thumb-turn internally to allow for evacuation in the event of a fire.

Information on access and equipment for firefighting (criteria 6).

The subject property is a converted mid-terrace house, subdivided into two self-contained apartments, consisting of two storeys, which we are only proposing to replace the windows. This item is not relevant the application.

11.0 Summary

For the reasons set out within this statement, it is respectfully considered that the proposals represent an appropriate and proportionate form of development which will preserve the character and appearance of the property whilst delivering significant improvements to its condition, energy efficiency and long-term sustainability. The application is therefore recommended for approval.
