DISCLAIMER

Whitby Wood Limited (WW) is appointed by client **Re:Shape T Ltd** to provide Structural, Civil and Geotechnical consultancy services for the development of Ashley Park, Tottenham Hale.

This report has been produced for the exclusive use of Re:Shape T Ltd for the purposes set out herein only and it should not be used in whole or in part by any third parties without the express permission of WW in writing. WW neither owes nor accepts any duty to any third party whether in contract, tort or otherwise and shall not be liable for any loss, damage or expense of whatsoever nature which is caused by their reliance on the information contained in this report.

EXECUTIVE SUMMARY

Appointment and Introduction
This Phase 1 Geotechnical and Geoenvironmental Desk Study has been prepared to support early design development and planning, using available third-party information, Envirocheck/BGS datasets and site walkover observations. No site-specific intrusive ground investigation data were available at the time of writing; therefore, the conclusions are preliminary and subject to confirmation by future ground investigation and monitoring. The red line boundary in this report is indicative and represents the boundary available at the time of writing. In addition, an Envirocheck Environmental report was conducted for the entirety of the Ashley Park site area which includes the Ashley House site in the south and the Cannon Factory site in the north of the boundary. However, this Phase 1 Desk Study considers only the Ashley House site.
Site and development
The former Ashley House site is located to the west of Ashley Road, south of the Rosa Luxemburg residential building, east of Down Lane Park and north of a number of residential properties along Hale Road. Berol House, a locally listed building, sits on the opposite side of Ashley Road and is currently vacant. The site is located approximately 200m northwest of Tottenham Hale underground and railway station. The surroundings comprise a mix of uses, including a range of recent developments providing ground and lower floor commercial units, with residential development. The proposal comprises construction of two residential blocks, an affordable living and a shared living block, aiming to provide approximately 522 shared-living units, 87 affordable social rented homes, commercial and employment spaces, and new community space. The current scheme comprises: - a Ground floor +6-storey affordable living block; - a Ground floor +23-storey shared living block; The proposals include delivering a mix of residential and commercial/amenity uses across the site.
The London Underground Victoria Line spur tunnel beneath/adjacent to Watermead Way and Station Road represent a key third-party constraint. The proposed works will require early engagement with London Underground Limited (LUL) and the adoption of appropriate movement control measures.
Preliminary ground model and geotechnical implications
The anticipated geological sequence comprises Made Ground over Enfield Silt and Kempton Park Gravels over London Clay, with deeper strata including the Lambeth Group and Thanet Sands. The current ground model is based on nearby BGS boreholes and regional datasets; uncertainty therefore remains until a site-specific ground investigation confirms stratigraphy, thicknesses and variability. According to the borehole records available, groundwater is expected to be encountered approximately 4.00mBGL within the Kempton Park Gravels.
A foundation options appraisal indicates that piled or piled-raft foundations are likely to be required for the shared living block, while shallow/raft solutions may be feasible for the affordable block subject to confirmation of settlement performance and LUL constraints.
Preliminary geoenvironmental implications
Walkover observations identified potential sources of contamination from the presence of an electrical sub-station on the site, and stockpiles of demolished material. As such, contamination within Made Ground and potential groundwater risk remain plausible and should be confirmed through targeted geoenvironmental investigation and testing.
A qualitative risk assessment is included, with further quantitative assessment recommended where required by the findings and proposed end use.

1 INTRODUCTION

1.1 PROJECT OVERVIEW

The client Re:Shape T Ltd has commissioned Whitby Wood to undertake a Phase 1 Geotechnical and Geoenvironmental Desk Study for the proposed development known as Ashley Park, Tottenham Hale (the “Site”).

The Site is located at Ashley Park, 414 Ashley Rd, London, N17 9LZ, and is bounded by Rosa Luxemburg apartments to the north, Ashley Road to the east, 2 Ashley Road (West Apartments) to the south, and Down Lane Park to the west. The approximate grid reference is E534317, N189668.

This desk study is intended to inform early design development and identify potential geotechnical and geoenvironmental constraints prior to submission of a planning application. The assessment draws upon available information from nearby borehole records, Envirocheck and BGS datasets, together with observations from a recent site walkover.

1.2 PROPOSED DEVELOPMENT

The previous buildings located on the Ashley House site have been demolished and the proposed redevelopment will comprise the construction of two mixed-use buildings (Class C3, Sui Generis, and Class E/F2), with commercial use at ground level and a mix of shared-living and affordable housing units above. The proposal also includes a new public realm, car and cycle parking, and other associated works. A plan of the proposed scheme at Ashley House is presented in Figure 1. It is to be noted that the red line boundary in Figure 1 is indicative. The proposed development will consist of the following:

- a Ground floor +6-storey affordable living block;
- a Ground floor +23-storey shared living block;
- 522 shared living units;
- 87 affordable housing units;
- Commercial and community space;
- New public realm;
- Car and cycle parking;

The planning and installation of significant ground works such as pile installations for the proposed affordable and shared-living units will require consultation from London Underground Limited due to the presence of London Underground Victoria Line spur tunnel beneath/adjacent to Watermead Way and Station Road.

No site-specific intrusive ground investigation data were available at the time of writing; the conclusions are therefore preliminary and subject to confirmation by future investigation.

This Phase 1 desk study is intended to support early design development and planning, and to inform the scope of future ground investigation.

Figure 1: Site and proposed development location

1.3 THE BRIEF AND OBJECTIVES

This report reviews the available information relevant to the Site to:

- Establish baseline geoenvironmental conditions, including a preliminary Conceptual Site Model (CSM).
- Establish baseline geotechnical conditions, including a preliminary geotechnical assessment.
- Identify preliminary site constraints and potential issues, including a geotechnical risk register.
- Summarise the known site history and historical land uses.
- Assess potential contamination risks through a Preliminary Risk Assessment (PRA).
- Identify gaps in the available information and provide recommendations for further work, such as a design ground investigation, site investigation specification, and/or a Generic Quantitative Risk Assessment (GQRA) or Detailed Quantitative Risk Assessment (DQRA), as appropriate.

1.4 SOURCES OF INFORMATION

The following sources of information have been used as part of this desk study:

- Landmark Envirocheck Report (Appendix A)
- British Geological Survey (BGS) Onshore GeoIndex (<https://www.bgs.ac.uk/information-hub/borehole-records/>)
- Google Maps and Google Earth (accessed on 14/01/26)
- Historic England Map Viewer (<https://historicengland.org.uk/listing/the-list/map-search>)
- Flood Risk Information Portal (<https://flood-map-for-planning.service.gov.uk/>)
- Historic England APA ArcGIS Map Viewer (<https://opendata-historicengland.hub.arcgis.com/datasets/historicengland::greater-london-archaeological-priority-areas-apas/explore?location=51.487320%2C-0.084602%2C9.57>)
- UK Radon Maps dataset (<https://www.ukradon.org/information/ukmaps>)
- Groundwise Searches Ltd - Comprehensive Desktop Utility Search
- LUL asset map viewer (TfL's Public Property Asset Register Web App)

1.5 LIMITATIONS

This report is subject to limitations that require certain assumptions to be made when drawing conclusions about the Site. These assumptions are stated and justified throughout the report. Key limitations include:

- No site-specific ground investigation: At the time of writing, no site-specific intrusive ground investigation has been undertaken for the proposed development. Geoenvironmental and geotechnical conclusions are therefore preliminary and will need to be reviewed and, where necessary, updated following completion of site-specific investigation, monitoring and laboratory testing.
- Design information at the time of writing: This report is based on the development proposals available at the time of issue. Material changes to the proposed layout, basement extent/depth, foundation solution, construction methodology or sequencing may affect the conclusions and recommendations and may require reassessment of risks, constraints and further work requirements.
- Reliance on third-party information: This report relies on information obtained from external sources and third parties. Whitby Wood has used reasonable skill and care in reviewing the available information; however, Whitby Wood cannot warrant the completeness or accuracy of third-party data and interpretations.

2 SITE SETTING AND HISTORY

2.1 SITE DESCRIPTION

The Site located on Ashley Road with an approximate grid reference of E534317, N189668 occupies an approximately trapezoidal plot and is currently a brownfield site with historically industrial and recently residential uses. It is located in the London Borough of Haringey and covers approximately 0.715ha. It is a relatively flat site with the ground level ranging between 7.30 and 8.00mAOD.

The surrounding area is an urban environment comprising commercial, residential, and industrial uses. It is directly bounded by Rosa Luxemburg apartments to the north, Ashley Road to the east, 2 Ashley Road (West Apartments) to the south, and Down Lane Park to the west.

This desk study is intended to inform early design development and identify potential geotechnical and geoenvironmental constraints prior to submission of a planning application. The assessment draws upon available information from nearby borehole records, Envirocheck and BGS datasets, together with observations from a recent site walkover.

2.2 SITE CONSTRAINTS

The following general site constraints have been identified and are discussed in further detail in the Constraints Plan, document: P452287-WW-XX-ZZ-SK-S-00003.

- Proximity to TfL Infrastructure:**
 The London Underground Victoria Line Spur tunnels run beneath Ashley Road East Site and adjacent to Ashley Road West Site. The London Underground Limited (LUL) zone of interest runs adjacent to the south-eastern site boundary (refer to Figure 3). The available information indicates approximately 8m cover to the tunnel axis. Proposed excavation and piling works may require further liaison with TfL / London Underground Limited (LUL) and compliance with LUL asset protection requirements.
- Access and Space Constraints:**
 The Site is located within a dense urban area with constrained working space, which may restrict access for construction plant, site investigation equipment, material storage and logistics. Construction sequencing and temporary works will need to consider these constraints.
- Existing Utilities and Services**
 Utility records (including Thames Water and UK Power Networks) have been provided at this stage. However, it should be assumed that records may be incomplete and that additional/unknown services may be present. Known Thames water sewer and UK Power Network assets are shown in Figure 2. A PAS128 utility survey and targeted trial pits may be required to confirm utility locations/depths before intrusive works and construction.

Figure 2: Site Constraint Plan

2.3 LONDON UNDERGROUND ASSETS

The London Underground Victoria Line Spur tunnels run beneath Ashley Road East Site and adjacent to Ashley Road West Site. The London Underground Limited (LUL) zone of interest (ZoI) runs adjacent to the south-eastern site boundary (refer to Figure 3).

Any works within, or in proximity to, the zone of interest will require consultation with TfL/LUL and compliance with their asset protection requirements. Appropriate assessments are likely to be required to demonstrate that ground movements resulting from the proposed works (including basement excavation, retaining wall construction, piling and any dewatering) will not adversely affect the tunnels. These typically include a ground movement assessment, agreement of construction controls, and (where required) a monitoring strategy.

At the time of writing, the line and level of the tunnels have not been confirmed from LUL asset records. Confirmation of tunnel geometry (including depth, diameter and any local features) will be required to accurately assess the relationship between the tunnels and the proposed development.

Based on available third-party information reviewed to date, received from works at a separate local development on Ashley Road East Site, the tunnels are anticipated to be within London Clay and at approximately 8.00-10.00m below ground level; this should be treated as indicative only and should be confirmed by LUL asset records/survey.

Given the overlap between the proposed building footprints and the LUL ZoI, careful design development and construction sequencing may be required to prevent adverse impacts on the Victoria Line infrastructure. It is likely that ground movement and damage category assessments will be required to justify that there is no significant impact on the tunnels as a result of the proposed development. To inform these assessments, line and level surveys of the tunnels/tracks are required as well as preliminary construction staging.

At this stage, it is recommended to continue engagement with LUL to confirm tunnel geometry and agree requirements for asset protection, including assessment scope, monitoring and construction controls.

Figure 3: Property Asset Register Public Web Map (Transport for London, Accessed 23/06/2026)

2.4 SITE WALKOVER

A site walkover was undertaken by Whitby Wood on 8th July 2026. Observations identified the potential sources of contamination; the electrical sub-station at the site entrance and demolition stockpiles. These findings suggest the possible presence of hydrocarbons, oils, heavy metals, asbestos, and other made ground contaminants, which will be considered in the conceptual site model.

Location (facing ESE): Site entrance on Ashley Road, inside the gates

Observation: Electrical sub-station present

Relevance: Potential contamination source (oils) and services constraint; confirm

Location (facing WNW): Site entrance on Ashley Road, inside the gates

Observation: Demolition waste stockpile, and vegetation

Relevance: Potential contamination source (asbestos)

Location (facing NW): Rosa Luxemburg apartments

Observation: Proximity of Rosa Luxemburg Apartments to site

Relevance: Working adjacent to existing buildings

Location (facing SE): Ashley Road East apartments

Observation: Proximity of Ashley Road East to site

Relevance: Working adjacent to existing buildings

Location (facing ESE): Site boundary at Ashley Road East apartments

Observation: Presence of sheet pile wall

Relevance: Proximity of neighbouring foundations to site; possible below-ground obstruction

Location (facing SW): Ashley Road

Observation: Site hoarding on Ashley Road

Relevance: Access/plant constraints due to site being located in an urban environment

Location (facing E): Ashley Road

Observation: Row of neighbouring terraced residential units

Relevance: Adjacent structure risk; confirm monitoring requirements

Location (facing SSE): Down Lane Park

Observation: Trees at Down Lane Park side of site boundary

Relevance: Risk of root obstruction during construction; tree influence

Figure 4: Site Walkover Observation Photos On the 8th of July. Observations identified an on-site electrical sub-station (potential contamination), site access constraints, structural and ground conditions, and potential hazards.

2.5 SITE HISTORY

A chronological review of the available site-specific historical maps provided by Landmark (Appendix 1) has been carried out and key historical development and land uses (inclusive of potentially contaminative uses) are summarised below. Historical records are available from 1873; they show that during the early 1900s, the site had been developed into a braid and bootlace factory then redeveloped in 1934-35 into a printing ink and varnish factory. Historically, the surrounding area featured intensive urbanisation and industrial activities. The industrial activities and nearby railway indicate that there is a persistent moderate contamination risk, primarily associated with Made Ground and potential hydrocarbons and metals. The limit for information to be deemed relevant is 250m, unless stated otherwise. *N.B., an Envirocheck environmental report was conducted for the entirety of the Ashley Park site area (Ashley House to the south and Cannon Factory to the north). However, only site history regarding the plot formerly known as Ashley House is covered below.*

Figure 5: Site History

1873

On-site: The site appears to have remained predominantly undeveloped (greenfield), with only limited isolated development present.

Off-site: The surrounding area is predominantly residential to the south of the site and greenfield to the north and east. Tottenham station and the railway line are present to the south-east and east of the site respectively.

Potential contamination: Railway proximity may locally increase the potential for hydrocarbon and metal contamination

Map Reference: Reproduced with the permission of the National Library of Scotland. (View map: Ordnance Survey, Middlesex Sheet XII (Hackney; Hornsey St Mary; Islington; Stoke Newington; Tottenham; Walthamstow; W... - Ordnance Survey Six-inch England and Wales, 1842-1952)

1896

On-site: The site appears to have remained predominantly undeveloped.

Off-site: Previously undeveloped greenfield land to the west and south of the site have now been developed with what can be assumed to be housing.

Potential contamination: primarily associated with Made Ground from construction and redevelopment activities, including brick rubble, ash and domestic refuse. Localised increased risk may be present near the railway corridor, where hydrocarbons and metals could occur.

Map Reference: Reproduced with the permission of the National Library of Scotland. (View map: Ordnance Survey, London (Edition of 1894-96) XIII (Tottenham) - Ordnance Survey 25-inch England and Wales, 1841-1952)

1915

On-Site: The site is shown to have been changed from an undeveloped greenfield site to a braid and bootlace factory.

Off-Site: Directly north to the site, the vacant land has been developed into a woollen factory. Directly south-west to the site, the residential area has been expanded with more regular and ordered arrangement of dwellings. Directly to the east of the site, the development of a pencil factory has replaced previously vacant land.

The land approximately 250m to the south of the site has been developed into a boot and shoe factory. A school and school grounds have replaced previously unnamed dwellings to the north-west of the site.

Approximately 430m north of the site (not pictured), a refuse destructor has been developed.

Potential Contamination: The introduction of on-site and off-site adjacent industrial use indicates a possible contamination risk of hydrocarbons, metals, solvents, ash/clinker, PAH's, and industrial residues – to be confirmed by GI.

Map Reference: Reproduced with the permission of the National Library of Scotland. (View map: Ordnance Survey, Essex (New Series 1913-) n LXXVII.7 (Tottenham) - Ordnance Survey 25-inch England and Wales, 1841-1952)

1939

On-Site: The braid and bootlace factory is redeveloped into a printing ink and varnish factory.

Off-Site: The woollen factory to the north of the site is redeveloped into a dry battery factory. A recreation ground with areas for athletics, tennis and a bowling green is established in the previously empty land north of the school and dry battery factory. The remainder of the area remains largely unchanged

Potential Contamination: The redevelopment of the boot and lace factory into a printing ink and varnish factory likely introduced volatile organic compound (VOC) contaminants. The development of a dry battery acid likely introduced contaminants of metals. The continuous industrial activity indicated an increased chance of fuel and combustion residue contamination.

Map Reference: Reproduced with the permission of the National Library of Scotland. (View map: Ordnance Survey, Essex (New Series 1913-) n LXXVII.7 (Tottenham) - Ordnance Survey 25-inch England and Wales, 1841-1952)

1955

On-Site: An additional building on the north side of the site has been developed as well as the establishment of a water-cooling tower on the west border of the site.

Off-Site: The surrounding area remains predominantly unchanged. A previously unmarked building 75m south of the site is now identified as a printing and stationery factory. An additional previously unmarked building 175m south-east of the site is identified as a printing machines factory. 50m south of the site an electrical sub-station has been erected. 75m east of the site a pumping station is erected in the railway Coal Yard.

Potential Contamination: The increase in industrial use indicates a continuous contamination risk, with potential contaminants including hydrocarbons, metals, fuel, combustion residue, and VOCs.

1961-1979

On-Site: No significant changes

Off-Site: Redevelopment of High Cross Road 100m south-west to the site, including demolition of previous residential buildings and construction of shared housing. Construction of electrical sub-station directly south of the site. Development of rail related works structure 100-250m south-east of site.

Potential Contamination: Construction of electrical sub-station likely to introduce higher levels of metal contamination. No significant new industrial source, any new contaminants primarily associated with Made Ground from construction and redevelopment activities, including brick rubble, ash and domestic refuse.

1979-1991

On-Site: Complete demolition of ink and varnish factory and any related structures.

Off-Site: Demolition of electrical sub-station directly south of site. Demolition and redevelopment of boot and shoe factory, and residential buildings into what is now a retail park 100-250m south of site. Demolition and redevelopment of residential buildings into primary school 250m south-west of site. Redevelopment of junction 100m south of site.

Potential Contamination: No significant new industrial source. Any new contaminants primarily associated with Made Ground from demolition, construction, and redevelopment activities, including brick rubble, ash and domestic refuse.

1991-1994

On-Site: Construction of Ashley House with two industrial buildings to the north and west of the site boundary, as well as a car park. An electric sub-station is also built on the south boundary of the site.

Off-Site: Adjacent to the south-south-east boundary of the site, a petrol station is constructed. Further development of the roads/junctions 100m south of site has taken place. Demolition of school 50-100m north-west of site and extension of Down Lane Park from north to previous location of school and adjacent to west boundary of site. Erection of electrical sub-station 75m south of site. Rail related works structure 100-250m south-east of site identified as the railway depot.

Potential Contamination: Construction of petrol station and erection of electrical sub-stations introduce increased risk of metals, hydrocarbon, fuel and combustion residue. Further contribution of contaminants associated with Made Ground (brick rubble, ash, and domestic refuse) from demolition, construction, and redevelopment works.

1999

On-Site: No significant changes observed.

Off-Site: Construction of building 100m south of site.

Potential Contamination: No new sources of contamination. Any new contaminants primarily associated with Made Ground from demolition, construction, and redevelopment activities, including brick rubble, ash and domestic refuse.

2016

On-Site: No significant changes observed.

Off-Site: Diversion of A503 100m south-east of site for development of Tottenham Hale Bus Station. Demolition of railway depot 250m east of site – redeveloped into residential blocks.

Potential Contamination: No new sources of contamination. Any new contaminants primarily associated with Made Ground from demolition, construction, and redevelopment activities, including brick rubble, ash and domestic or retail refuse.

2022

On-Site: No significant changes observed.

Off-Site: Previously listed factory buildings have been demolished directly north of site. Petrol station directly south of site demolished.

Potential Contamination: No new sources of contamination. Any new contaminants primarily associated with Made Ground from demolition, construction, and redevelopment activities, including brick rubble, ash and domestic or retail refuse.

2026

On-Site: Ashley House residential development demolished.

Off-Site: Rosa Luxembourg Apartments constructed on vacant land directly north of site. Building known as Cannon Factory 50m south-east of site also demolished.

Potential Contamination: No new sources of contamination. Any new contaminants primarily associated with Made Ground from demolition, construction, and redevelopment activities, including brick rubble, ash and domestic or retail refuse.

2.6 GROUND CONDITIONS

2.6.1 British Geological Survey (BGS) Geological Maps

The BGS Map in Figure 6s indicates that the superficial geology immediately beneath the site comprises Enfield Silt, Alluvium, and Kempton Park Gravel.

Figure 7 shows the mapped bedrock beneath the site as London Clay. No other bedrock strata are recorded directly below superficial deposits within a 1000m radius of the site. London Clay is anticipated to be underlain by the Lambeth Group, Thanet Sands and Chalk Formation.

2.6.2 BGS Borehole Information

Eleven available historical BGS boreholes located in proximity to the site (Figure 8) have been reviewed as part of this desk study assessment. The general information of the selected boreholes is presented in Table 1, and the geology encountered within these boreholes is summarised in Table 2.

The BGS borehole records around the site indicate a sequence of superficial deposits underlain by bedrock formations. The superficial deposits comprise Made Ground, underlain by Enfield Silts, underlain by Kempton Park Gravels. Made Ground typically comprises flint, brick, clay, timber, concrete, and rubble – reflecting historical urban development. The Enfield Silts are anticipated to primarily feature silty sandy clay, although some boreholes have also reported presence of some gravel. The Kempton Park Gravels are reported to consist of brown clayey sandy gravels but are also reported as ballast in several borehole logs.

The superficial deposits are underlain by the London Clay Formation, a thick, stiff, and fissured blue clay known for its low permeability and generally stable engineering behaviour, although it may undergo volume changes with moisture variations. The London Clay in this area is approximately 17 m thick.

Underlying the London Clay is the Lambeth Group. While the specific sub-unit encountered is not definitively known, the upper layers are typically cohesive. With depth, the materials become increasingly granular, ranging from mottled clays to dense pebbly sands. This unit is approximately 14 m thick.

Beneath the Lambeth Group lies the Thanet Sand Formation. Information from the historical BGS logs is limited, with many over 100 years old, though available records indicate a thickness of approximately 8m to 10m of silty Sand.

The lowermost formation encountered, at approximately 45 m below ground level, is Chalk, a relatively stable stratum well known for its significant water-bearing capacity.

It should be noted that all BGS boreholes are located outside the site boundary, and ground levels were not available for some boreholes. Consequently, sections A-A and B-B, shown in Figure 9 and Figure 10, represent an indicative geological sequence only.

It should also be noted that the BGS borehole log data used is relatively old. Therefore, a site-specific ground investigation will be required to confirm the actual subsurface conditions and geotechnical parameters on site.

Figure 8 graphically represents this information included within the geological section. Only the highlighted boreholes were used as they were deemed the most relevant; the remaining boreholes were excluded to avoid excessive density within the section.

Table 2: Encountered Stratigraphy from BGS Borehole Logs

2.6.3 Geological Cross Section

The geological cross-section derived from historical borehole logs from BGS are presented in Figure 9 and Figure 10.

Figure 9: Geological Section A-A

Figure 10: Geological Section B-B

2.7 HYDROGEOLOGY & HYDROLOGY

Beneath the superficial deposits lies the London Clay Formation, which is designated as an Unproductive Bedrock Aquifer. This formation has very low permeability and therefore acts as an effective barrier to downward contaminant migration.

Underlying the London Clay are the Lambeth Group and the Thanet Sand Formation, both of which are designated as Secondary A Aquifers. Beneath the Thanet Sand lies the Chalk, which forms a Principal Aquifer. Principal Aquifers can yield significant quantities of water, and wells are often constructed into the Chalk to provide potable water supplies.

Overall, groundwater beneath the site is expected to be primarily associated with the superficial deposits, while deeper groundwater resources are afforded a degree of natural protection. These classifications are shown in Figure 11 and Figure 12.

Figure 13 presents a groundwater vulnerability map, which shows the extent to which the strata are susceptible to pollution. Strata close to the ground surface are generally considered to be more vulnerable.

2.7.1 BGS Groundwater and Water Strikes

The first groundwater strikes were recorded in boreholes:

• TQ38NW71	at	1.52 mbgl	or	6.30 mAOD
• TQ38NW69	at	2.43 mbgl	or	6.30 mAOD
• TQ38NW68	at	1.82 mbgl	or	7.00 mAOD
• TQ38NW253	at	2.90 mbgl	or	5.65 mAOD
• TQ38NW256	at	3.00 mbgl	or	5.65 mAOD
• TQ38NW185	at	3.34 mbgl	or	6.80 mAOD
• TQ38NW434	at	2.74 mbgl	or	5.90 mAOD

In most cases, the first strike was encountered within the Kempton Park Gravels.

No groundwater monitoring results are available.

2.7.2 Flood Risk Assessment

The nearest surface water feature to the site is the River Lea, which is located 400m east of the site. River Lea runs alongside multiple artificial reservoirs which are located approximately 800m east of the site.

According to the Environment Agency's Flood Map for Planning, the site is situated within Flood Zone 2, as shown in Figure 14, indicating a medium risk of flooding from rivers or the sea. The site is reported to be protected by spatial flood defences on the River Lea. Therefore, the risk of flooding from rivers or seas is deemed residual in the event of defence breach.

The Environment Agency long-term flood risk data classifies the risk from surface water and fluvial/tidal sources as very low and identifies flooding from reservoirs as unlikely for the surrounding area.

A separate Flood Risk Assessment has been completed in the FRA document: ACHF-WW-ZZ-XX-TC-C-00002.

Figure 11: Superficial Aquifer Designations (BGS, Accessed 18/06/2026)

Figure 12: Bedrock Aquifer Designations (BGS, Accessed 18/06/2026)

Figure 13: Groundwater Vulnerability (BGS, Accessed 18/06/2026)

Figure 14: Flood Map (for Planning, Environmental Agency, Accessed 18/06/2026)

2.7.3 BGS Groundwater Flooding Susceptibility

According to the Envirocheck Landmark Information Group (2026), the site is located within an area that is not susceptible to groundwater flooding.

2.7.4 Source Protection Zone

The site is located within the Outer Source Protection Zone II, as shown in Figure 15, i.e., the travel time between a pollutant to the protected source is less than or equal to 400 days. The site is also located 400m north-west of a Source Protection Zone I. This is associated with a groundwater abstraction point located approximately 650m west of the site and expired in 2013. There are no other noted operational groundwater abstractions within 2km of the site.

2.7.5 Target Standards for Water Body

The controlled waters protection must be carefully considered due to the SPZ and underlying aquifers. A piling/Foundation Works Risk Assessment may be required.

2.7.6 Potential Pathways

The potential on site contamination sources are not currently in hydraulic conductivity with the potential receptor, however, construction methods required for the proposed development could create new possible pathways and therefore linkage between source and receptor.

In the case that piled foundations are chosen as the most optimal foundation solution, possible pathways between contamination sources and the potential receptor may occur.

The description of pathways and their time scale are discussed below:

- **Groundwater Flow:** installed piles may provide a preferential flow path along their surfaces allowing contaminated perched groundwater above the Reading beds to flow to the Aquifer beneath or within areas that are in hydraulic conductivity. This is considered a possible permanent pathway that could be active as soon as construction of a pile is complete. Therefore, if piled foundations are proposed for this development, a Piling Assessment/Foundation Works Risk Assessment will need to be carried out, especially in the case that the pile embedment depth exceeds the base of the London Clay strata.
- **Leachates:** water draining through the Made Ground from above may collate contamination as it passes through, this water could then flow through pathways along the piles surface to the Principal Aquifer below or within areas that are in hydraulic conductivity. This is considered a permanent pathway that could be active as soon as construction of a pile is complete.
- **Direct Contact:** the installation of piles themselves could lead to contaminated soil being physically pushed or collapse into the Principal Aquifer below, or within areas that are in hydraulic conductivity. This would be an isolated and therefore temporary pathway, only active during pile installation.

Figure 15: Source Protection Zones (Envirocheck Report, Accessed 18/06/2026)

2.8 GROUND AND GROUNDWATER AGGRESSIVITY

No test data is currently available on the ground and groundwater aggressivity at the site. Appropriate testing should be undertaken during the ground investigation to allow the correct assignment of a Design Sulphate Class (DSC) for buried concrete. BRE SD1 testing of soil and groundwater should be undertaken during GI to confirm DS/ACEC classes for buried concrete, piles and substructure.

2.9 MINING AND MINERAL EXTRACTION

No mineral extraction sites, recorded by the British Geological Survey (BGS), are found within 1km of the development site. No mining activity has been identified beneath or local to the site, as per the Mining Remediation Authority.

2.10 LISTED BUILDINGS

There are no listed structures on site. The closest Grade II listed buildings are located within a 300-500m radius west of site, as shown in Figure 16. These structures are listed as 2 Monument Way, List Entry Number: 1079226; Tottenham High Cross, List Entry Number: 1188856; and The Beehive Public House, List Entry Number: 1393614. These listed buildings are not anticipated to be a key geotechnical constraint based on distance, but heritage/structural constraints should be confirmed by the relevant consultants.

The site itself does not feature any structures and is listed as a brownfield site.

2.11 LOST RIVERS

Due to the significant and sprawling development within London, many historical rivers and streams have been 'lost' through time. These rivers were often covered by roads and/or directed through culverts to allow development above.

A lost river is noted in The Haringey City Council's Strategic Flood Risk Assessment (SFRA). Moselle Brook, previously River Moselle, was a direct tributary of the River Lea and has been culverted to artificially flow into Pymmes Brook near the junction of Mill Mead Road and Ferry Lane. The lost river runs approximately 50m west and 150m north of the site, as shown in Figure 17.

2.12 ARCHAEOLOGY

A site-specific Archaeological Desk-Based Assessment has been carried out by HEA Consultants. According to this assessment, the site is located within two Archaeological Priority Areas:

- A Tier 2 APA which is associated with the historic core of Tottenham Hale. The settlement appears to have originated in the Saxon or Medieval period on the basis of past findings which has identified evidence for Saxon and then 12 14th century activity. The APA has been classified Tier 2 by the GLHER as it contains a potential for Saxon to Medieval settlement activity. In addition, a Mesolithic working site has been found in the west of the APA on a site known as "Welbourne" and associated with activity adjacent to a potential water source; and
- A Tier 3 APA associated with the Lea Valley terrace gravels and former floodplain. This APA encompasses an area along the River Lea and is associated with further APAs in other London Boroughs along the course of the river. This APA is classified Tier 3 by the GLHER as it covers a vast landscape with a perceived potential to contain in particular organic palaeoenvironmental remains associated with wetland and riverine environments, as well as associated prehistoric exploitation of this landscape.

However, the findings of the archaeological assessment state that the former development and demolition on site will have likely resulted in widespread ground disturbance, likely truncating any sub-surface archaeological remains which may have been present. Therefore, it is the conclusion that no further archaeological work is required in this particular instance.

2.13 RADON GAS

According to the Envirocheck Report and the UK Health Security Agency, the site is in an area where less than 1% of homes are above the Action Level; no radon protection is anticipated subject to confirmation by the project architect/building regulations consultant.

Figure 16: Map indicating nearby Listed Structures (Historic England, Accessed 22/06/2026)

Figure 17: Moselle Brook (Map of Watercourses in Haringey, accessed: 25/06/2026)

2.14 UNEXPLODED ORDNANCE (UXO)

During World War II, the city of London was bombed significantly more than any other area in the UK, meaning unexploded ordnance (UXO) remains a potential risk to construction workers and nearby residents.

A qualitative assessment of the UXO risk has been carried out based on CIRIA C681, using historical land use in conjunction with the bombing hazard records from the Zetia Preliminary UXO Assessment (Figure 18) for the site. The variables considered are listed in Table 3. Scores have been assigned to each variable according to the potential risk for aerial-delivered UXO, as stated in CIRIA Report C681.

The risk level for the site is categorized as severe, high, medium, low, or negligible, depending on the assessment results. The level of risk determines the extent and type of mitigation required, as outlined in Table 4.

The potential presence of UXO is assessed with respect to the likelihood of encountering UXO during the proposed works. The site specific UXO risk assessment is shown in Table 5.

The calculated UXO risk score is **14**, indicating a high risk of UXO presence on site. It is therefore recommended that the client commission a full desk study and risk assessment by a specialist bomb-disposal company, undertake a UXO site survey. Also, where possible, adapt the design to avoid intrusive works in areas of suspected UXO.

Table 3: UXO Risk Score Variables

Variables	Score	Evidence
Bombing Density (informed by Zetica Preliminary UXO Report)	4	Very High
	3	High
	2	Moderate
	1	Low
Site Location	4	Cities
	3	Brownfield sites/ large towns
	2	Small Towns
	1	Rural
Historical Land Use at Time of Bombing	4	Site of military use, railway, marshland, power station / industrial centre
	3	Site adjacent to wartime military use, railway marshland, power station/ industrial centre.
	2	Site near to wartime military use, railway marshland, power station/ industrial centre.
	1	Greenfield site or agricultural land only
Evidence of post-war development on site	4	No evidence
	3	Minimal excavation
	2	Moderate excavation
Area of ground disturbance of the proposed works	1	Excavation of entire site
	4	Deep excavation over extended areas/ driven piles
	3	Deep excavation over limited areas/ shallow excavation over extended areas/ sheet and auger piles
	2	Excavation or services
	1	Boring drilling

Table 4: UXO Risk Levels and General Recommended Mitigation (from CIRIA C681)

Score	Risk	Mitigation
>16	Severe	Commission a full desk study and risk assessment by specialist bomb disposal company.
14 – 16	High	- Carry out a UXO site search using surface and down hole magnetometers. - Change the design works, if possible, to avoid suspected UXOs or intrusive groundworks.
11 - 13	Moderate	Commission a full desk study and risk assessment by specialist bomb disposal company.
9 - 10	Low	- Carry out simple site precautions: - Contractor/Operator “awareness” briefing. - Minimise the number of constructions works close to the excavation during digging. - Minimise the width and depth of excavation where possible. - Careful excavation methodology where feasible (i.e. hand excavation). - CAT scanning prior to excavation (Note that CAT scanning cannot conclusively detect UXOs)
< 9	Negligible	None (Though contractor should be made aware that the risk still exists). Standard risk mitigation measures apply.

Table 5: UXO Risk Score

Variables	Score	Evidence
Bombing Density	3	Moderate
Site Location	4	Site is situated within London
Historical Land Use	2	Site adjacent to wartime military use, railway, marshland, power station/ industrial centre
Post-War Development	2	The site has undergone redevelopment, with earlier industrial buildings completely replaced by residential buildings
Proposed Works	3	Deep excavation may be required in some areas due to anticipated structural loads; however, this is subject to change pending the results of site-specific ground investigation, as current geotechnical conditions and soil properties are not yet confirmed
Calculated UXO Risk Score	14	High

Figure 18: UXO Zetica Map (Accessed 22/06/2026)

2.15 ENVIRONMENTAL PUBLIC REGISTER INFORMATION

The following information is based on the Envirocheck Site Sensitivity Report, provided by Landmark. Relevant information within 500m of the site border is included and shown on plan in Figures 19-21 and described in the sections below.

2.15.1 Pollution Incidents to Controlled Waters

According to the Envirocheck Report, 14 pollution incidents to controlled water points were recorded within 500m south-east of the site, surrounding the Ferry Lane Locks:

Distance (m)	Pollutant	Date	Category
319	Oils	1989	III – Minor
323	Oils	1991	III – Minor
326	Oils	1994	III – Minor
354	Misc.	1990	III – Minor
357	Oils	n/a	II – Significant
384	Sewage	1991	III – Minor
385	Oils	1996	III – Minor
387	Oils	1994	III – Minor
388	Sewage	n/a	II – Significant
391	Sewage	1995	III – Minor
392	Chemicals	1992	III – Minor
448	Oils	n/a	III – Minor
460	Misc.	1991	III – Minor
464	Oils	1993	III – Minor

It is possible that remedial measures have been implemented since the incidents were recorded; in any case given the distance from the site, it is not considered likely to pose a significant risk to the proposed development.

2.15.2 Local Authority Pollution Prevention and Controls

One Integrated Pollution Prevention control is located 156m south-east of the site. It was registered to Veolia Energy & Utility Services UK Ltd. on 3rd of April 2020.

Three Local Authority Pollution Prevention and Controls records are noted within 500m:

- A petrol station 284m west of the site
- General waste incineration processes 298m north of the site
- A petrol filling station 466m south-east of the site

Petrol stations and waste incineration centres are known to use hazardous materials, but due to the distance from the site, contamination from these potential sources is not likely.

Figure 19: Environmental Public Register Information (Envirocheck Report, Accessed 19/02/2026)

Figure 20: Nitrate Vulnerability Zones (Envirocheck Report, accessed 24/06/2026)

2.15.3 Substantiated Pollution Incidents

According to the Envirocheck Report, 7 substantiated pollution incidents were recorded within 500m south-east of the site, surrounding the Ferry Lane locks:

Distance (m)	Date	Pollutant	Water Impact	Land Impact
346	2016	Oils – Diesel	II – Significant	IV – None
374	2009	Hydrocarbons	II – Significant	IV – None
405	2014	Oils – Organic	II – Significant	IV – None
414	2016	Oils – Mixed waste	II – Significant	IV – None
416	2014	Organic Chemicals	II – Significant	IV – None
433	2012	Contaminated Water	I – Major	IV – None
471	2022	Oils	II – Significant	IV – None

2.15.4 Waste and Landfill

Based on the Envirocheck report, there is a historical landfill site 457m north-east of the site which was used for inert and industrial deposited waste. The first recorded input of the site was in 1955 and last recorded input in 1962. Given the distance from the site and a prolonged time since last use, it is unlikely to pose any potential contamination sources.

Items 115 (23m south of site), 116 (40m north of site), and 117 (296m north of site) in Figure 19 show previously active licensed waste management facilities with licences which expired in 1993, 2005, and 1995, respectively. Items 115 and 117 are categorised as household, commercial, and industrial waste transfer stations and amenity sites. Item 116 is categorised as a metal recycling plant. Due to their proximity to site, it is likely that they pose a risk of contamination within the site.

2.15.5 Potentially Infilled Land

Three areas of potentially infilled land have been identified, two of which were infilled by 1896, and one by 1952 during the urbanisation of the area; these are presented in Figure 19:

- One area approximately 114m west of the site (former land use: pond/marsh/river/stream/dock etc).
- One area approximately 232m north-west of site (former land use: pond/marsh/river/stream/dock etc).
- One area approximately 355m north-west of site (former land use: pond/marsh/river/stream/dock etc).

Given their distance from the site, these areas are not considered likely to pose a contamination risk to the proposed development.

2.15.6 Nitrate Vulnerability Zones

There is a Nitrate vulnerable zone 48m east of the site boundary, as shown in Figure 20. This area dictates that nitrate concentrations in sources of public drinking water exceed, or are likely to exceed, the EC limit of 50 milligrams per litre as per the purposes of the European Community (EC) Nitrate Directive (91/676/EEC).

2.15.7 Contemporary Trade Directories

181 contemporary trade directories were found within 500m of site, as shown in Figure 21. Only the most notable entries of interest were identified within the contemporary trade directories:

- Waste disposal services
- Textile manufacturing
- Printers
- Petrol Filling Stations
- Brewers
- Printers Textile
- Electric motor works
- Commercial cleaning services
- Laundrettes
- Car body repairs
- Glass Fibre Manufacturers
- Aluminium fabricators
- Tungsten tool manufacturers and distributors

Of the listed trade directories, most of them are noted as inactive and are unlikely to have introduced significant contaminants to the site. However, minor risks from manufacturing plant and materials like metals, lubricants, and oils may still exist.

The printers, cleaning services and laundrettes pose a potential risk due to the use and storage of cleaning chemicals, solvents, and detergents – all of which may lead to soil or groundwater contamination if mishandled.

2.15.8 Commercial Services and Points of Interest

There are 69 points of interest for commercial services within the 500m zone. Within 100m of site there are 6 noted points of interest:

- A manufacturing and production point of interest approximately 50m north of the site which is classed as unspecified works or factories
- A petrol station and car wash 10m south of the site
- 2 unspecified works or factories facilities within 25m east of the site
- A waste storage, processing and disposal facility 5m east of site
- An unspecified works or factories facility 37m north-west of the site

Figure 21: Contemporary Trade Directories, Commercial Services, and Points of Interest (Envirocheck Report, accessed 24/06/2026)

3 PRELIMINARY CONCEPTUAL SITE MODEL AND QUALITATIVE RISK ASSESSMENT

As indicated in previous sections, no site-specific ground investigations have been carried out on site. The Qualitative Risk Assessment carried out in this Desk Study is based on available information of the site and its surroundings, such as the historical and present use, relevant Envirocheck Reports and information from BGS.

3.1 POTENTIAL CONTAMINANT SOURCES

Potential sources are derived from typical contaminants associated with the site's previous use, described in Section 2.5, using Potential Contaminants from the Assessment of Land, DEFRA 2002, Fact sheets from the World Health Organisation and observations made in the site walkover. Potential sources, their associated contaminants and their origin are listed in Table 6.

3.2 POTENTIAL PATHWAYS

The following pathways are identified based on the hydrogeological, hydrological, and geological setting of the site, as well as the anticipated works in the future:

- Ingestion, dermal contact, and inhalation of contaminated dust/vapour/fibres.
- Leaching of contaminants into perched and unperched groundwaters.
- Direct contact with temporary and permanent occupants.
- Piling works/drilling into ground.

3.3 POTENTIAL RECEPTORS

The potential receptors are summarised in Table 7. Receptors are identified with respect to the site's proposed development, in line with the contaminated land statutory guidance (Part 2A, 2012).

3.4 PRELIMINARY QUALITATIVE RISK ASSESSMENT

To assess the potential risk, the Source – Pathway – Receptor relationship was evaluated. The presence of potential risk to the receptors is determined by identifying whether there are potential active pollutant linkages between the source and on or off-site receptors. For the potential linkages identified, a qualitative risk assessment is carried out to assign the relevant risk level.

3.5 CONCEPTUAL SITE MODEL

The conceptual site model is presented in Table 9. The model presents the Qualitative Risk Assessment and classifies the risk of each source-pathway-receptor relationship.

Table 6: Identified Sources of Contamination for the Proposed Development

Source	Possible Contaminants	Source of information
Made Ground (on-site)	Heavy metals, Asbestos, Sulphates, Phenols, PAHs, PCBs, petroleum hydrocarbons, VOCs, SVOCs and Ground Gas.	General and Historical maps
Contaminants from electrical sub-station (on-site)	PCBs and petroleum hydrocarbons	Historical maps
Contaminants due to historical site uses (e.g. ink and varnish factory) (on-site)	Heavy metals, Arsenic, Asbestos, Sulphates, Phenols, PAHs, PCBs, Hydrocarbons, Fuels, Oils and combustion residue.	Historical maps and Envirocheck Report

Source	Possible Contaminants	Source of information
Contaminants due to previous site use (e.g. residential building) (on-site)	Hydrocarbons (from vehicle activity and fuel use), heavy metals, oils, lubricants, asbestos (from building materials), organic compounds such as PCBs, PAHs, VOCs & SVOCs, Asbestos and phenols associated with waste storage.	Historical maps and Envirocheck Report
Contaminants due to historical site uses (e.g. boot & lace factory, woollen factory) (off-site)	Heavy metals, Arsenic, Asbestos, Sulphates, Phenols, PAHs, PCBs, Hydrocarbons, Fuels, Oils and combustion residue.	Historical maps and Envirocheck Report
Contaminants due to recent site use (e.g. petrol station, railway, railway depot, car wash, waste facility) (off-site)	Hydrocarbons (from vehicle activity and fuel use), heavy metals, oils, lubricants, asbestos (from building materials), organic compounds such as PCBs, PAHs, VOCs & SVOCs, Asbestos and phenols associated with waste storage.	Historical maps and Envirocheck Report
Groundwater (on-site)	Heavy Metals, Arsenic, Nitrates, Sulphates, Ground Gas, Hydrocarbons, Acetone, PAH's, Cyanide and PCBs.	Envirocheck Report

Table 7: Identified Receptors for the Proposed Development

Receptor	Future Receptor	Temporary Receptor
On Site		
Human health of end users	Yes	No
Human health during site preparation and construction	No	Yes
Groundwater		Yes
Off site		
Neighbouring sites and site users (including neighbouring school)		Yes

Table 8: Risk Matrix for Preliminary Conceptual Site Model

			Consequence			
			Severe	Medium	Mild	Minor
			4	3	2	1
Probability	High	4	Very High Risk	High Risk	Moderate Risk	Moderate Risk
	Likely	3	High Risk	Moderate Risk	Low Risk	Low Risk
	Low	2	Moderate Risk	Low Risk	Low Risk	Very Low Risk
	Unlikely	1	Low Risk	Low Risk	Very Low Risk	Very Low Risk

Table 9: Preliminary Conceptual Site Model for the Proposed Development

Potential Source	Contaminants of Concern	Potential Receptor	Possible pathway	Potential Pollutant Linkage	Likelihood	Comment	Consequences	Risk Classification
On-Site Sources								
Made Ground	Heavy metals, Arsenic, Asbestos, Sulphates, Phenols, PAHs, PCBs, petroleum hydrocarbons, VOCs, SVOCs and Ground Gas	Human health of end users	Ingestion, dermal contact, and inhalation of contaminated dust/vapour/fibres.	Potentially Active	Low to Likely	Most of the area will be covered by buildings or hardstanding, which would effectively interrupt any potential contamination pathways. Landscaping details are likely to change.	Severe	Low to Moderate Risk
		Human health of site preparation and construction workers	Ingestion, dermal contact, and inhalation of contaminated dust/vapour/fibres.	Potentially Active	Low to Likely	Appropriate PPE is to be worn. A watching brief, toolbox talks, and RAMS should be reviewed and implemented prior to commencement of works.	Severe	Low to Moderate Risk
		Human health of neighbouring site users (including neighbouring school)	Ingestion, dermal contact, and inhalation of contaminated dust/vapour/fibres.	Potentially Active	Low	Exposure is only likely during excavation, temporary storage, or removal of excavated materials. Appropriate precautions during excavation are assumed.	Severe	Moderate Risk
		Groundwater	Leachates	Active	Likely	Pollutants from the made ground can be absorbed and carried by the groundwater and this could migrate across site easily within the Secondary A Aquifer.	Medium	Moderate Risk
Previous site use (e.g. ink and varnish factory, boiler room, rubbish storage, waste bins, electrical substations, etc) (on-site)	Hydrocarbons (from vehicle activity and fuel use), heavy metals, oils, lubricants, asbestos (from building materials), and organic compounds such as PCBs, PAHs, VOCs, SVOCs, and phenols associated with waste storage.	Human health of site preparation and construction workers	Ingestion, dermal contact, and inhalation of contaminated dust/vapour/fibres.	Potentially Active	Low to Likely	Appropriate PPE is assumed to be worn. A watching brief, toolbox talks, and RAMS should be reviewed and implemented prior to commencement of works.	Severe	Moderate to High Risk
		Human health of end users	Ingestion, dermal contact, and inhalation of contaminated dust/vapour/fibres.	Potentially Active	Low	Detailed ground investigation involving geoenvironmental testing must be conducted to reduce uncertainty around potential contamination. A GQRA will be produced based on the findings of the GI to characterise risk.	Severe	Moderate Risk
			Leachates through groundwater	Potentially Active	Low to Likely	Given modern containment standards and maintenance responsibilities typically managed by the utility provider, the likelihood of significant leakage is low. Consequently, the overall risk to human health receptors is considered minor.	Severe	Low to Moderate Risk
		Human health of neighbouring site users	Ingestion or inhalation of contaminated dust/vapour/fibres	Potentially Active	Low	Exposure is only likely during excavation, temporary storage, or removal of excavated materials. Appropriate precautions during excavation are assumed. It is assumed the contractor will follow best practice and use mitigation techniques such as dust suppression via water or appropriate site hoarding for fibre containment. RAMs and mitigation strategy must be drafted by the contractor.	Severe	Low Risk
			Leachates through groundwater	Potentially Active	Low to Likely	In the end use stage, there is a low likelihood of contaminants leaching into the groundwater and affecting drinking-water supplies, as this would require the contaminants to be mobilised at high concentrations, transported through the groundwater system, enter service pipes, and be consumed regularly by a receptor.	Severe	Low to Moderate Risk

Potential Source	Contaminants of Concern	Potential Receptor	Possible pathway	Potential Pollutant Linkage	Likelihood	Comment	Consequences	Risk Classification
Groundwater	Heavy metals, Arsenic, Asbestos, Sulphates, Phenols, PAHs, PCBs, petroleum hydrocarbons.	Human health of end users	Ingestion and dermal contact	Potentially Active	Unlikely	The proposed development shows that most of the site will be covered by buildings or hard surfaces, which would effectively interrupt any potential contamination pathways. It is very unlikely that end users will be exposed to groundwater.	Severe	Low Risk
		Human health of site preparation and construction workers	Ingestion and dermal contact	Potentially Active	Likely	Pile foundations may be likely for the construction of the shared living block, so it's likely that there will be contact between human and ground water.	Severe	Moderate Risk
		Sewer outlets	Leachates	Potentially Active	Low	Some possibility of contact via leaching of groundwater through contaminated ground.	Medium	Low Risk
On-site electrical substation	PCBs and petroleum hydrocarbons	Human health of end users	Leachates	Potentially Active	Low	Given modern containment standards and maintenance responsibilities typically managed by the utility provider, the likelihood of significant leakage is low. Consequently, the overall risk to controlled waters and human health receptors is considered minor.	Severe	Low to Moderate Risk
		Human health of site preparation and construction workers	Ingestion and dermal contact and inhalation of contaminated dust/vapour/fibres	Potentially Active	Low	Given modern containment standards and maintenance responsibilities typically managed by the utility provider, the likelihood of significant leakage is low. Consequently, the overall risk to controlled waters and human health receptors is considered minor.	Severe	Low to Moderate Risk
Off-Site Sources								
Petrol Station, Car Wash, Electrical Sub-Station, Waste Facility	Hydrocarbons, aromatic hydrocarbons (PAH's), metals, PCB's, and petroleum hydrocarbons, organic and inorganic BTEX, asbestos, and phenols	Human health of construction workers	Ingestion, dermal contact and inhalation od contaminated dust/vapour/fibres	Potentially Active	Likely	Exposure is only likely during excavation, temporary storage, or removal of excavated materials. Appropriate precautions during excavation are assumed.	Medium	Moderate Risk
			Leaching of contaminant into perched and unperched groundwater					
		Human health of end users	Leaching of contaminants into perched and unperched groundwater	Potentially Active	Likely	The proposed development shows that most of the site will be covered by buildings or hard surfaces, which would effectively interrupt any potential contamination pathways. It is very unlikely that end users will be exposed to groundwater.	Medium	Moderate Risk
		Groundwater (principal Aquifer)	Piling works/drilling	Potentially Active	Unlikely	It is assumed that appropriate safety protocols are followed on the adjacent site and that all workers are equipped with and use suitable PPE.	Medium	Moderate Risk
Railway and Railway Depot	Heavy metals, hydrocarbons	Human health of construction workers/end users	Ingestion, dermal contact and inhalation od contaminated dust/vapour/fibres	Potentially Active	Unlikely	Exposure is only likely during excavation, temporary storage, or removal of excavated materials. Appropriate precautions during excavation are assumed.	Low	Low Risk
			Leaching of contaminant into perched and unperched groundwater					

Potential Source	Contaminants of Concern	Potential Receptor	Possible pathway	Potential Pollutant Linkage	Likelihood	Comment	Consequences	Risk Classification
		Groundwater (principal Aquifer)	Piling works/drilling	Potentially Active	Unlikely	It is assumed that appropriate safety protocols are followed on the adjacent site and that all workers are equipped with and use suitable PPE.	Medium	Moderate Risk
Historic industrial structures (e.g., Boot and Lace factory, Woollen Factory, Pencil Factory)	Hydrocarbons (from vehicle activity and fuel use), heavy metals, oils, lubricants, asbestos (from building materials), and organic compounds such as PCBs, PAHs, VOCs, and SVOCs.	Human health of site preparation and construction workers	Ingestion, dermal contact, and inhalation of contaminated dust/vapour/fibres.	Potentially Active	Low	It is assumed that appropriate safety protocols are followed on the adjacent site and that all workers are equipped with and use suitable PPE.	Medium	Low Risk
		Human health of end users	Ingestion, dermal contact, and inhalation of contaminated dust/vapour/fibres.	Inactive	Low	The proposed development shows that most of the site will be covered by buildings or hard surfaces, which would effectively interrupt any potential contamination pathways.	Medium	Low Risk

4 PRELIMINARY GEOTECHNICAL ASSESSMENT

4.1 PROPOSED FOUNDATION SYSTEM

The selection of the proposed foundation system will depend on the detailed findings of the forthcoming site-specific ground investigation, which will determine the geotechnical characteristics of the underlying strata. Other factors such as structural loading, settlement tolerances, and the type of proposed buildings will also influence the final foundation design.

Based on the anticipated ground conditions, it is expected that deep foundations, such as piles or piled raft, will be the most optimal solution for the Shared Housing Block tower. The Affordable Housing is anticipated to have a similar optimal solution although a raft only solution should not be ruled out.

Table 10 discusses the suitability of typical foundation solutions.

A detailed geotechnical investigation and design review are recommended to confirm the most appropriate foundation solution for the site. Options may be raised following the findings.

Table 10: Foundation Options Appraisal

Foundation Solution	Proposed Structure		
	General	Shared Housing Block	Affordable Housing Block
Shallow foundations (pads/strips)	Efficient and cost-effective for low-moderate loads where competent bearing strata are shallow and settlements are acceptable.	Very unlikely to be feasible due to high loads. Settlement and differential settlement likely to govern.	
Raft foundation	Can reduce differential settlement relative to pads/strips due to raft stiffness, but typically more material-intensive and requires more detailed analysis.	Unlikely to be feasible due to high loads; settlement likely to govern.	Possible but uncertain; would require detailed settlement assessment. Highly dependent on the undrained shear strength and elasticity parameters of Made Ground.
Piled raft foundation	Raft with piles to reduce settlement and/or control differential settlement. Requires soil-structure interaction assessment and load sharing between raft and piles.	Feasible and potentially optimal, allowing settlement control and potential reduction in pile numbers vs a pile-only solution (subject to analysis).	Feasible and likely optimal, providing settlement control. Highly dependent on the undrained shear strength and elasticity parameters of Made Ground.
Piled foundations (pile-only)	Well-established solution for high loads. Settlement should be assessed using pile group analysis and interaction effects where relevant.	Feasible, but may be less efficient than a piled raft if raft contribution is significant. Pile type and length to be confirmed; high loads may require larger diameter and/or longer piles.	Feasible; CFA piles may be suitable depending on loads and required pile length (to be confirmed).

4.2 PRELIMINARY GROUND MODEL

A preliminary ground model has been developed based on available British Geological Survey (BGS) borehole records located in the vicinity of the site. It should be noted that the majority of these boreholes are situated outside the site boundary and contain at most only descriptions of encountered geology. Therefore, the model provides only an indicative representation of the expected geological sequence at the site. A site-specific ground investigation will be required to confirm the actual ground conditions and verify the accuracy of this model.

According to the BGS records, the ground profile in the surrounding area typically comprises Made Ground overlying Enfield Silts and Kempton Park Gravels which are underlain by London Clay Formation, the Lambeth Group and Thanet Sands at depth. For 3 of the Borehole Logs, their levels were not recorded, thus, Google Earth elevations were used to estimate the ground levels where not recorded.

The stratum parameters were conservatively assumed considering the limited available information. Parameter values were adopted from *R.F. Craig’s ‘Soil Mechanics’*, *Tomlinson’s ‘Foundation Design and Construction’* and inferred from soil descriptions recorded in the borehole logs.

4.3 GEOTECHNICAL RISK ASSESSMENTSS

A geotechnical risk assessment has been produced for the development of the site at Ashley Park, Tottenham Hale to identify and quantify potential hazards, the probability of the hazard occurring, impact and risk rating. The risk rating matrix is provided in Table 11. This risk assessment reflects the current level of understanding of the geotechnical and geoenvironmental aspects of the scheme and is subject to revisions and updates as the design progresses. Table 13 presents the preliminary geotechnical risk register.

Risk rating (R) = Probability (P) x Impact (I)

Geotechnical and geoenvironmental aspects of the scheme are subject to revisions and updates as the design progresses.

Table 11: Risk Matrix for Geotechnical Risk Assessment

			Impact			
			Severe	Medium	Mild	Minor
			4	3	2	1
Probability	High	4	Very High Risk	High Risk	Moderate Risk	Moderate Risk
	Likely	3	High Risk	Moderate Risk	Low Risk	Low Risk
	Low	2	Moderate Risk	Low Risk	Low Risk	Very Low Risk
	Unlikely	1	Low Risk	Low Risk	Very Low Risk	Very Low Risk

Table 12: Preliminary Ground Model for the Proposed Development, using BGS boreholes.

Strata	Depth to Top Level (mbgl)	Thickness (m)	Unit Weight (kN/m³)	Strength Parameters		Note
				Undrained Strength, Cu (kPa)	Friction Angle Φ (°)	
Made Ground	0.00	0.50	16	N/A	N/A	Variable depth/material; not relied upon for bearing or stiffness.
Enfield Silts	0.50	0.80 – 1.00	14	N/A	N/A	Variable depth/material; not relied upon for bearing or stiffness.
Kempton Park Gravel	1.30 – 1.50	3.20 – 3.50	15	N/A	N/A	Variable depth/material; not relied upon for bearing or stiffness.
Weathered London Clay ¹	4.50 – 6.00	2.50	20	40 + 14z	N/A (undrained)	cu taken as 40 kPa at top of layer, increasing linearly with depth; z = depth below top of London Clay ¹ (m).
London Clay ²	8.50	12.50	20	75	N/A (undrained)	Constant cu assumed for preliminary assessment.
Lambeth Group – Cohesive	21.00	9.00	20	75	N/A (undrained)	Constant cu assumed for preliminary assessment.
Lambeth Group – Granular	30.00	7.00	20	N/A	32	φ ’ assumed based on engineering judgement and local experience (confirm by GI/testing).
Thanet Sands	37.00	6.70	20	N/A	33	φ ’ assumed based on engineering judgement and local experience (confirm by GI/testing).
Chalk	43.70	N/A	20	N/A	27	φ ’ assumed based on typical values (e.g., Tomlinson, Foundation Design and Construction).

Table 13: Preliminary Geotechnical Risk Assessment for the Proposed Development

Hazard	Cause	Consequence(s)	Pre-Control Risk				Proposed Mitigation
			P	I	R	Classification	
Unforeseen ground conditions	Limited site-specific intrusive data; variable Made Ground/superficial deposits; potential soft/weak zones, shrink/swell, tree influence due to proximity to Down Lanes Park, drift filled hollows.	Design changes, programme delay, increased cost (remedial works / redesign), construction risk	3	4	12	High	Undertake targeted GI (geotechnical + geoenvironmental) to confirm stratigraphy/variability; derive design parameters; update ground model and risk register; adopt observational method/hold points where uncertainty remains.
Impact on TfL/LUL infrastructure	Ground movement/vibration from basement excavation, retaining walls, piling; potential effects from temporary dewatering	Settlement/distortion of tunnels, safety/approval risk, programme delay	2	4	8	Moderate	Early engagement with TfL/LUL Asset Protection; confirm tunnel line/level; define assessment scope (movement assessment/FE checks as required); agree construction controls and monitoring (trigger levels); select low-vibration methods where practicable; manage dewatering impacts.
Excessive settlement of building foundations	Weak compressive ground Poor subgrade Soft/hard spots at formation level Increased soil surcharge following construction. Shallow foundation on soft ground	Excessive/ differential settlement across structures Potential cost of remedial work Delay on construction. Paving damage.	3	4	12	High	Appropriate and adequate risk assessment. Adopt appropriate geotechnical parameters for design. Appropriate foundation design such as CFA piles
Damage to buried utilities /third-party assets	Utilities within/adjacent to roads and footways; incomplete records; excavation and ground movement	Service strikes, outages, H&S risk, programme delay, claims	3	3	9	Moderate	Obtain utility records and undertake PAS128 survey (GPR/EML) and trial pits; establish exclusion zones; permit-to-dig; scan before excavation; hand-dig in sensitive areas; agree requirements with utility owners (incl. Thames Water).
Interface with existing / retained structures	Excavation adjacent to existing foundations/retained façades; vibration; changes in support conditions	Structural damage/cracking; differential settlement; heritage impact; delay/claims	3	3	9	Moderate	Condition surveys; confirm existing foundations/basements by records and trial pits; movement assessment and monitoring plan; design temporary works to limit ground movements (stiff retaining system, sequencing); protection measures for retained structures; establish trigger/action levels.
Unexploded ordnance (UXO)	Potential legacy UXO from WWII	H&S risk to personnel/public; programme disruption; cost	2	4	8	Moderate	Commission specialist UXO desk study and risk assessment; implement UXO management plan; consider supervised intrusive works / clearance where required; include UXO procedures in RAMS.
Pollution of Environment	Unsuitable handling and storage of potentially contaminated sub-surface material during construction. Failure of remediation strategies. Surface run-off sediment loaded water following flooding of construction works.	Potential cost of additional disposal Health risks to construction workers and end users. Mobilisation of contaminants in bust blow, leachate etc. Migration to adjacent land. Legal liability for nuisance or damages etc. Migration to principal aquifer below.	3	4	12	High	Appropriate ground investigation coverage with contamination risk assessment. Detailed and adequate design of remediation strategy. Removal of unsuitable materials. Suitable handling and storage methodologies. Removal and disposal to off-site licensed landfill. Use of appropriate construction/piling methods to minimise risk of developing migration pathway for contaminants. Control surface water run-off during and after construction. Early consultation with Contaminated Land Officer.

5 RECOMMENDED FURTHER WORKS AND INFORMATION REQUIRED

The following actions are recommended to reduce uncertainty and progress the design. A number of these have been actioned as part of this planning application submission, and others will form planning conditions for discharge in due course, or sit outside the planning process:

- **Ground investigation (Geotechnical)**
 - o Undertake a targeted intrusive ground investigation to confirm stratigraphy and variability of Made Ground and superficial deposits (including the potential for localised drift-filled hollows/soft infill).
 - o To provide parameters for foundation design.
 - o Install and monitor groundwater standpipes as required to confirm seasonal groundwater levels and inform temporary works and waterproofing strategy.
- **Geoenvironmental investigation and risk assessment**
 - o Undertake geoenvironmental sampling and laboratory testing of Made Ground and relevant natural strata, followed by CSM update and risk assessment (GQRA/DQRA as required) to confirm mitigation measures for the proposed end use and controlled waters.
- **Utilities / drainage / sewers**
 - o Confirm the location, depth and condition of existing sewers and drainage runs (surface and foul), including utility record searches and survey (e.g., GPR/EML) and CCTV/condition survey where diversion/protection may be required.
 - o Confirm sewer constraints (easements/exclusion zones, manhole locations, invert levels) and coordinate with the civil/drainage strategy.
- **Flood risk and drainage strategy**
 - o Obtain and review the project Flood Risk Assessment (FRA) and outline drainage strategy. Confirm any constraints relevant to basement construction and temporary works (including surface water management and discharge requirements).
- **Statutory/environmental constraints**
 - o Review and summarise key statutory constraints from the Envirocheck dataset (e.g., SPZ status, abstractions, discharge consents, recorded contamination entries and landfill/industrial sites) and confirm whether any regulator engagement is required (EA/Local Authority).
- **Enabling works, asbestos and hazardous materials**
 - o As the previous development has been demolished in 2024, ensure appropriate asbestos surveys (R&D where required) have been completed prior to demolition and intrusive works via request of demolition completion records, asbestos clearance certificates, waste transfer notes, and any records of removed tanks/hotspots where available.
- **Buried obstructions / existing foundations**
 - o Undertake targeted trial pits (and/or enabling works surveys) to confirm the presence/extent of buried obstructions such as existing foundations, slabs, tanks, and hardstanding that could affect excavation, piling and programme.
- **Third-party assets (LUL and adjacent structures)**
 - o Continue engagement with London Underground Limited (LUL) to confirm tunnel geometry and agree requirements for asset protection, including assessment scope, monitoring and construction controls.
- **Information to be Confirmed**
 - o Latest layout, formation levels, proposed levels, structural/column loads, drainage strategy, landscaping/tree information, utilities strategy, and construction sequence.

6 SUMMARY

The proposed Ashley Park redevelopment comprises refurbishment of the brownfield site into a high-quality mixed-use development which intends to provide approximately 522 shared-living units, 87 affordable social rented homes, commercial and employment spaces, and new community space.

The Site is located in a dense urban area within the London Borough of Haringey and is surrounded by commercial, residential and institutional uses. Key constraints for the redevelopment include the proximity of London Underground Limited (LUL) Victoria Line spur tunnels beneath Ashley House East Site, the presence of Thames Water assets (including sewers and water mains) along/near site boundaries, UKPN substations, and the general logistical constraints associated with deep excavation in a confined urban environment.

The anticipated geological profile comprises Made Ground overlying Enfield Silts and Kempton Park Gravels, with London Clay and deeper strata including the Lambeth Group, Thanet Sands and White Chalks. The current understanding is based on historical borehole records and regional datasets rather than site-specific investigation; therefore, the ground model remains preliminary. A targeted site-specific ground investigation is recommended to confirm stratigraphy, groundwater conditions and parameters for basement and foundation design.

From a geoenvironmental perspective, potential sources of contamination include Made Ground and operational/historic land uses associated with factories and the wider urban setting. Potential contaminants may include hydrocarbons, metals, PAHs, asbestos-containing materials, and VOCs, with localised risks associated with plant areas (e.g., substations/switch rooms) where oils may be present. Ground gas generation is also possible in Made Ground and should be confirmed through targeted monitoring where required.

Given the proximity to LUL assets, early engagement with LUL is required to confirm tunnel geometry (line and level) and agree asset protection requirements. This is expected to inform the need for a ground movement assessment, construction controls, and a monitoring strategy to manage the effects of excavation, retaining wall installation, piling and any dewatering.

Geotechnically, the Site is considered suitable for redevelopment in principle, subject to confirmation by investigation. Deep foundations (e.g., piles or piled rafts) are likely to be required for the taller towers and heavily loaded elements, while shallower solutions may be feasible for the lower-rise Affordable Block subject to settlement performance with the aid of GI findings, structural loads, settlement criteria, and LUL asset protection requirements. Where piling is adopted, pile load testing may be beneficial to confirm performance and optimise design (potentially reducing pile numbers and/or sizes).

Construction will take place within a sensitive urban environment. Appropriate management measures will be required to control noise, dust and vibration, maintain safe access to adjacent buildings and footways, and minimise disruption. Early coordination with the wider project team and adjacent occupiers/stakeholders will be important throughout the construction phase.

7 CONCLUSION

This Phase 1 Geotechnical and Geoenvironmental Desk Study has not identified any constraints that are expected to preclude redevelopment of the Site. However, as no site-specific intrusive ground investigation data were available at the time of writing, the ground model and associated findings remain preliminary. Further investigation and specialist assessments are therefore required to confirm ground conditions in due course, refine the Conceptual Site Model (CSM), and inform safe and sustainable design and construction.

Based on the information reviewed to date, the following actions are recommended:

- **Site-specific ground investigation:** Undertake a detailed ground investigation to confirm stratigraphy, variability of Made Ground and superficial deposits, groundwater conditions, and to derive parameters for retaining structures and foundation design.
- **Foundation strategy (preliminary):** The Social Housing and Affordable Housing buildings are likely to require deep foundations (e.g. piles or piled raft) due to higher structural loads and the proposed basement arrangement. The Co-living block may be feasible with shallower foundations subject to confirmation of bearing capacity and settlement performance.
- **Geoenvironmental assessment and monitoring:** Given the presence of Made Ground and the historic/institutional land use, undertake appropriate geoenvironmental sampling and testing (including screening against relevant Generic Assessment Criteria) and baseline ground gas monitoring to assess potential methane/carbon dioxide risk and confirm the requirement for any protection measures.
- **Unexploded ordnance (UXO):** Appoint a specialist UXO consultant to undertake a UXO desk study and risk assessment prior to intrusive works, and to define any required mitigation measures.
- **Archaeology:** The Site lies within a Tier 2 Archaeological Priority Area; an archaeological consultant should be appointed to confirm the requirements for further assessment, mitigation and any enabling works constraints.
- **London Underground Limited (LUL):** The proposed deep basements and piling works in proximity to London Underground assets will require early engagement with LUL to confirm tunnel line and level and agree asset protection requirements. This is expected to inform the need for ground movement assessment, monitoring, and construction controls to manage the potential effects of excavation, retaining wall installation and any dewatering adjacent to the Northern Line tunnels.

Geology 1:50,000 Maps

This report contains geological map extracts taken from the BGS Digital Geological map of Great Britain at 1:50,000 scale and is designed for users carrying out preliminary site assessments who require geological maps for the area around the site. This mapping may be more up to date than previously published paper maps.

The various geological layers - artificial and landslip deposits, superficial geology and solid (bedrock) geology are displayed in separate maps, but superimposed on the final 'Combined Surface Geology' map. All map legends feature on this page. Not all layers have complete nationwide coverage, so availability of data for relevant map sheets is indicated below.

LANDMARK INFORMATION GROUP[®]

Artificial Ground and Landslip

Artificial ground is a term used by BGS for those areas where the ground surface has been significantly modified by human activity. Information about previously developed ground is especially important, as it is often associated with potentially contaminated material, unpredictable engineering conditions and unstable ground.

Artificial ground includes:

- Made ground - man-made deposits such as embankments and spoil heaps on the natural ground surface.
- Worked ground - areas where the ground has been cut away such as quarries and road cuttings.
- Infilled ground - areas where the ground has been cut away then wholly or partially backfilled.
- Landscaped ground - areas where the surface has been reshaped.
- Disturbed ground - areas of ill-defined shallow or near surface mineral workings where it is impracticable to map made and worked ground separately.

Mass movement (landslip) deposits on BGS geological maps are primarily superficial deposits that have moved down slope under gravity to form landslips. These affect bedrock, other superficial deposits and artificial ground. The dataset also includes foundered strata, where the ground has collapsed due to subsidence.

Superficial Geology

Superficial Deposits are the youngest geological deposits formed during the most recent period of geological time, the Quaternary, which extends back about 1.8 million years from the present.

They rest on older deposits or rocks referred to as Bedrock. This dataset contains Superficial deposits that are of natural origin and 'in place'. Other superficial strata may be held in the Mass Movement dataset where they have been moved, or in the Artificial Ground dataset where they are of man-made origin.

Most of these Superficial deposits are unconsolidated sediments such as gravel, sand, silt and clay, and onshore they form relatively thin, often discontinuous patches or larger spreads.

LANDMARK INFORMATION GROUP[®]

Bedrock and Faults

Bedrock geology is a term used for the main mass of rocks forming the Earth and are present everywhere, whether exposed at the surface in outcrops or concealed beneath superficial deposits or water.

The bedrock has formed over vast lengths of geological time ranging from ancient and highly altered rocks of the Proterozoic, some 2500 million years ago, or older, up to the relatively young Pliocene, 1.8 million years ago.

The bedrock geology includes many lithologies, often classified into three types based on origin: igneous, metamorphic and sedimentary.

The BGS Faults and Rock Segments dataset includes geological faults (e.g. normal, thrust), and thin beds mapped as lines (e.g. coal seam, gypsum bed). Some of these are linked to other particular 1:50,000 Geology datasets, for example, coal seams are part of the bedrock sequence, most faults and mineral veins primarily affect the bedrock but cut across the strata and post date its deposition.

Published 1873

Source map scale - 1:10,560

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840's. In 1854 the 1:2,500 scale was adopted for mapping urban areas; these maps were used to update the 1:10,560 maps. The published date given therefore is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas. In the late 1940's, a Provisional Edition was produced, which updated the 1:10,560 mapping from a number of sources. The maps appear unfinished - with all military camps and other strategic sites removed. These maps were initially overprinted with the National Grid. In 1970, the first 1:10,000 maps were produced using the Transverse Mercator Projection. The revision process continued until recently, with new editions appearing every 10 years or so for urban areas.

Historical Aerial Photography

Published 1945 - 1950

Source map scale - 1:10,560

The Historical Aerial Photos were produced by the Ordnance Survey at a scale of 1:1,250 and 1:10,560 from Air Force photography. They were produced between 1944 and 1951 as an interim measure, pending preparation of conventional mapping, due to post war resource shortages. New security measures in the 1950's meant that every photograph was re-checked for potentially unsafe information with security sites replaced by fake fields or clouds. The original editions were withdrawn and only later made available after a period of fifty years although due to the accuracy of the editing, without viewing both revisions it is not easy to spot the edits. Where available Landmark have included both revisions.

London

Published 1985

Source map scale - 1:25,000

These maps were produced by the Russian military during the Cold War between 1950 and 1997, and cover 103 towns and cities throughout the U.K. The maps are produced at 1:25,000, 1:10,000 and 1:5,000 scale, and show detailed land use, with colour-coded areas for development, green areas, and non-developed areas. Buildings are coloured black and important building uses (such as hospitals, post offices, factories etc.) are numbered, with a numbered key describing their use.

They were produced by the Russians for the benefit of navigation, as well as strategic military sites and transport hubs, for use if they were to have invaded the U.K. The detailed information provided indicates that the areas were surveyed using land-based personnel, on the ground, in the cities that are mapped.

Ordnance Survey Plan

Published 1990 - 1995

Source map scale - 1:10,000

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840's. In 1854 the 1:2,500 scale was adopted for mapping urban areas; these maps were used to update the 1:10,560 maps. The published date given therefore is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas. In the late 1940's, a Provisional Edition was produced, which updated the 1:10,560 mapping from a number of sources. The maps appear unfinished - with all military camps and other strategic sites removed. These maps were initially overprinted with the National Grid. In 1970, the first 1:10,000 maps were produced using the Transverse Mercator Projection. The revision process continued until recently, with new editions appearing every 10 years or so for urban areas.

10k Raster Mapping

Published 1999

Source map scale - 1:10,000

The historical maps shown were produced from the Ordnance Survey's 1:10,000 colour raster mapping. These maps are derived from Landplan which replaced the old 1:10,000 maps originally published in 1970. The data is highly detailed showing buildings, fences and field boundaries as well as all roads, tracks and paths. Road names are also included together with the relevant road number and classification. Boundary information depiction includes county, unitary authority, district, civil parish and constituency.

VectorMap Local

Published 2026

Source map scale - 1:10,000

VectorMap Local (Raster) is Ordnance Survey's highest detailed 'backdrop' mapping product. These maps are produced from OS's VectorMap Local, a simple vector dataset at a nominal scale of 1:10,000, covering the whole of Great Britain, that has been designed for creating graphical mapping. OS VectorMap Local is derived from large-scale information surveyed at 1:1250 scale (covering major towns and cities), 1:2500 scale (smaller towns, villages and developed rural areas), and 1:10 000 scale (mountain, moorland and river estuary areas).

Index Map

For ease of identification, your site and buffer have been split into Slices, Segments and Quadrants. These are illustrated on the Index Map opposite and explained further below.

Slice
Each slice represents a 1:10,000 plot area (2.7km x 2.7km) for your site and buffer. A large site and buffer may be made up of several slices (represented by a red outline), that are referenced by letters of the alphabet, starting from the bottom left corner of the slice "grid". This grid does not relate to National Grid lines but is designed to give best fit over the site and buffer.

Segment
A segment represents a 1:2,500 plot area. Segments that have plot files associated with them are shown in dark green, others in light blue. These are numbered from the bottom left hand corner within each slice.

Quadrant
A quadrant is a quarter of a segment. These are labelled as NW, NE, SW, SE and are referenced in the datasheet to allow features to be quickly located on plots. Therefore a feature that has a quadrant reference of A7NW will be in Slice A, Segment 7 and the NW Quadrant.

A selection of organisations who provide data within this report:

Envirocheck reports are compiled from 136 different sources of data.

Introduction

The Environment Act 1995 has made site sensitivity a key issue, as the legislation pays as much attention to the pathways by which contamination could spread, and to the vulnerable targets of contamination, as it does the potential sources of contamination. For this reason, Landmark's Site Sensitivity maps and Datasheet(s) place great emphasis on statutory data provided by the Environment Agency/Natural Resources Wales and the Scottish Environment Protection Agency; it also incorporates data from Natural England (and the Scottish and Welsh equivalents) and Local Authorities; and highlights hydrogeological features required by environmental and geotechnical consultants. It does not include any information concerning past uses of land. The datasheet is produced by querying the Landmark database to a distance defined by the client from a site boundary provided by the client. In this datasheet the National Grid References (NGRs) are rounded to the nearest 10m in accordance with Landmark's agreements with a number of Data Suppliers.

Radon Potential dataset Copyright Notice

Information supplied from a joint dataset compiled by The British Geological Survey and Public Health England. The probability result is only valid for properties above ground. All basement and cellar areas are considered to be at additional risk from high radon levels. If an underground room such as a cellar or basement makes up part of the living or working accommodation, the property should be tested regardless of Radon Affected Area status.

APPENDIX B – ZETICA UXO REPORT

UNEXPLODED BOMB RISK MAP

SITE LOCATION

Location: N17 9LZ,
Map Centre: 534341,189679

This map principally indicates a hazard from Unexploded Bombs (UXB) due to WWII bombardment. Other sources of Unexploded Ordnance (UXO) may be present. It should be noted that this map does not represent UXO risk and should not be reported as such when reproduced.

LEGEND

London Bomb Risk

How to use your Unexploded Bomb (UXB) risk map?

This map indicates the potential for UXBs to be present because of World War Two (WWII) bombing. It can be incorporated into a technical report, such as a Phase 1 Desk Study, or similar document as an indication of the potential for UXO encounter on a Site. Other sources of UXO may also be indicated, although note that these are not comprehensive and more detailed research is required to confirm their presence.

What if my Site is in a moderate or high density area?

During WWII, London was bombed more times than any other city in the UK. The bombing densities across the city are generally moderate to high in comparison to the rest of the UK.

You will receive two map downloads for sites on the boundary of London: one to demonstrate the bombing density in relation to the rest of the UK, and another to reflect the bombing density of the site in relation to the rest of London.

Typically, we recommend that a detailed UXO desk study and risk assessment is commissioned for sites in London.

Additionally, if your site is in close proximity to a strategic target, military establishment, airfield or bombing decoy, then [additional detailed research](#) is recommended.

If my site is in a low risk area, do I need to do anything?

If both the map and other research confirm that there is a low potential for UXO to be present on your site, then, subject to your own comfort and risk tolerance, works can proceed with no special precautions.

If you are unsure whether other sources of UXO may be present, you can request one of our [pre-desk study assessments \(PDSA\)](#) by emailing a site boundary and location to pdsa@zetica.com.

You should never plan site work or undertake a risk assessment using these maps alone. More detail is required, to include an assessment of the likelihood of a source of UXO hazard from other military activity not reflected on these maps.

If I have any questions, who do I contact?

tel: +44 (0) 1993 886682 email: uxo@zetica.com web: www.zeticauxo.com

The information in this UXB risk map is derived from a range of sources and should be used with the [accompanying notes on our website](#).

Zetica cannot guarantee the accuracy or completeness of the information or data used and cannot accept any liability for any use of the maps. These maps can be used as part of a technical report or similar publication, subject to acknowledgement. The copyright remains with Zetica Ltd.

Dear Sir / Madam

An Asset Location Search is recommended when undertaking a site development. It is essential to obtain information on the size and location of clean water and sewerage assets to safeguard against expensive damage and allow cost-effective service design.

The following records were searched in compiling this report: - the map of public sewers & the map of waterworks. Thames Water Utilities Ltd (TWUL) holds all of these.

This search provides maps showing the position and size of Thames Water assets close to the proposed development and also manhole cover and invert levels, where available.

Please note that none of the charges made for this report relate to the provision of Ordnance Survey mapping information. The replies contained in this letter are given following inspection of the public service records available to this company. No responsibility can be accepted for any error or omission in the replies.

You should be aware that the information contained on these plans is current only on the day that the plans are issued. The plans should only be used for the duration of the work that is being carried out at the present time. Under no circumstances should this data be copied or transmitted to parties other than those for whom the current work is being carried out.

Thames Water do update these service plans on a regular basis and failure to observe the above conditions could lead to damage arising to new or diverted services at a later date.

Contact Us

If you have any further queries regarding this enquiry please feel free to contact a member of the team on 0800 009 4540, or use the contact details below:

Waste Water Services

Please provide a copy extract from the public sewer map.

Enclosed is a map showing the approximate lines of our sewers. Our plans do not show sewer connections from individual properties or any sewers not owned by Thames Water unless specifically annotated otherwise. Records such as "private" pipework are in some cases available from the Building Control Department of the relevant Local Authority. Where the Local Authority does not hold such plans it might be advisable to consult the property deeds for the site or contact neighbouring landowners. The public sewer map relates only to sewerage apparatus of Thames Water Utilities Ltd, it does not disclose details of cables and or communications equipment that may be running through or around such apparatus. The sewer level information contained in this response represents all of the level data available in our existing records. Should you require any further Information, please refer to the relevant section within the 'Further Contacts' page found later in this document.

For your guidance:

- The Company is not generally responsible for rivers, watercourses, ponds, culverts or highway drains. If any of these are shown on the copy extract they are shown for information only.
- Any private sewers or lateral drains which are indicated on the extract of the public sewer map as being subject to an agreement under Section 104 of the Water Industry Act 1991 are not an 'as constructed' record. It is recommended these details be checked with the developer.

Clean Water Services

Please provide a copy extract from the public water main map.

Enclosed is a map showing the approximate positions of our water mains and associated apparatus. Please note that records are not kept of the positions of individual domestic supplies. For your information, there will be a pressure of at least 10m head at the outside stop valve. If you would like to know the static pressure, please contact our Customer Centre on 0800 316 9800. The Customer Centre can also arrange for a full flow and pressure test to be carried out for a fee.

Asset Location Search

For your guidance:

- Assets other than vested water mains may be shown on the plan, for information only.
- If an extract of the public water main record is enclosed, this will show known public water mains in the vicinity of the property. It should be possible to estimate the likely length and route of any private water supply pipe connecting the property to the public water network.

Further contacts:

Waste Water queries

Should you require verification of the invert levels of public sewers, by site measurement, you will need to approach the relevant Thames Water Area Network Office for permission to lift the appropriate covers. This permission will usually involve you completing a TWOSA form. You can do this by emailing customer.feedback@thameswater.co.uk with the email subject header 'Enquiry – TWOSA', along with details of the request.

If you have any questions regarding sewer connections, budget estimates, diversions or building over issues please direct them to our service desk which can be contacted by writing to:

Asset Location Search - Sewer Key

Public Sewer Types (Operated and maintained by Thames Water)

Other Sewer Types (Not operated and maintained by Thames Water)

Notes:

- 1) All levels associated with the plans are to Ordnance Datum Newlyn.
- 2) All measurements on the plan are in metres.
- 3) Arrows (on gravity fed sewers) or flecks (on rising mains) indicate the direction of flow.
- 4) Most private pipes are not shown on our plans, as in the past, this information has not been recorded.

Sewer Fittings

A feature in a sewer that does not affect the flow in the pipe. Example: a vent is a fitting as the function of a vent is to release excess gas.

Operational Controls

A feature in a sewer that changes or diverts the flow in the sewer. Example: A hydrobrake limits the flow passing downstream.

End Items

End symbols appear at the start or end of a sewer (pipe). Examples: an Undefined End at the start of a sewer indicates that Thames Water has no knowledge of the position of the sewer upstream of that symbol. Outfall on a surface water sewer indicates that the pipe discharges into a stream or river.

Other Symbols

Symbols used on maps which do not fall under other general categories.

Areas

Lines denoting areas of underground surveys, etc.

Ducts or Crossings

5) 'na' or '0' on a manhole indicates that data is unavailable.

6) The box appearing alongside a sewer line indicates the internal diameter of the pipe in millimeters. Text next to a manhole indicates the manhole reference number and should not be taken as a measurement. If you are unsure about any text or symbology, please contact Property Searches on 0800 003 4545.

The position of the apparatus shown on this plan is given without obligation and warranty, and the accuracy cannot be guaranteed. Service pipes are not shown but their presence should be anticipated. No liability of any kind whatsoever is accepted by Thames Water for any error or omission. The actual position of mains and services must be verified before any works are undertaken. Asset Location Search - Water Key

Water Pipes (Operated & Maintained by Thames Water)

- 4"** **Distribution Main:** The most common pipe shown on water maps. With few exceptions, domestic connections are only made to distribution mains.
- 16"** **Trunk Main:** A main carrying water from a source of supply to a treatment plant or reservoir, or from one treatment plant or reservoir to another. Also a main transferring water in bulk to smaller water mains used for supplying individual customers.
- 3" SUPPLY** **Supply Main:** A supply main indicates that the water main is used as a supply for a single property or group of properties.
- 3" FIRE** **Fire Main:** Where a pipe is used as a fire supply, the word FIRE will be displayed along the pipe.
- 3" METERED** **Metered Pipe:** A metered main indicates that the pipe in question supplies water for a single property or group of properties and that quantity of water passing through the pipe is metered even though there may be no meter symbol shown.
- Transmission Tunnel:** A very large diameter water pipe. Most tunnels are buried very deep underground. These pipes are not expected to affect the structural integrity of buildings shown on the map provided.
- Proposed Main:** A main that is still in the planning stages or in the process of being laid. More details of the proposed main and its reference number are generally included near the main.

PIPE DIAMETER	DEPTH BELOW GROUND
Up to 300mm (12")	900mm (3')
300mm - 600mm (12" - 24")	1100mm (3' 8")
600mm and bigger (24" plus)	1200mm (4')

Valves

- General Purpose Valve
- Air Valve
- Pressure Control Valve
- Customer Valve

Hydrants

- Single Hydrant

Meters

- Meter

End Items

Symbol indicating what happens at the end of a water main.

- Blank Flange
- Capped End
- Emptying Pit
- Undefined End
- Manifold
- Customer Supply
- Fire Supply

Operational Sites

- Booster Station
- Other
- Other (Proposed)
- Pumping Station
- Service Reservoir
- Shaft Inspection
- Treatment Works
- Unknown
- Water Tower

Other Symbols

- Data Logger
- Casement:** Ducts may contain high voltage cables. Please check with Thames Water.

Other Water Pipes (Not Operated or Maintained by Thames Water)

- Other Water Company Main:** Occasionally other water company water pipes may overlap the border of our clean water coverage area. These mains are denoted in purple and in most cases have the owner of the pipe displayed along them.
- Private Main:** Indicates that the water main in question is not owned by Thames Water. These mains normally have text associated with them indicating the diameter and owner of the pipe.

END OF REPORT
