

Figure 1 shows a color calibration bar. The top row contains numerical values: 0, 0.1, 0.2, 0.3, 0.4, 0.5, 1.0, 1.5, and 2.0. Below these values is a series of colored squares. The first five squares (0 to 0.5) are grayscale, transitioning from black to white. The next four squares (1.0 to 1.5) are primary colors: red, green, and blue. The final square (2.0) is a yellowish-white. This bar is used to ensure color accuracy in the printed document.
