Subject: Re: St Aloysius' College Sports Grounds failed TPO trees on south facing bank

1. leaning Lombardy Poplar spec reduce too weight by up to 10 meters leaving monolith (make safe) due to leaning towards rear gardens.

2. Ash compressed against Lombardy Poplar with ripped out major limbs and included bark (fell) leaving monolith

3. Dead standing Sycamore (fell)

4. Fallen Lombardy Poplar clear and stack for habitat.

Reason for failure on the Poplars is due to fungus in the lower stems.
