Subject: RE: 67 Lawrence Road, London, N15 4EY - Submission of condition discharge and security gate applications

Morning Valerie,

Vabel have provided responses to points b) and f) of the Design Officer's comments as I've set out below and would just like to clarify whether the question relating to the neighbouring development is for Vabel to clarify?

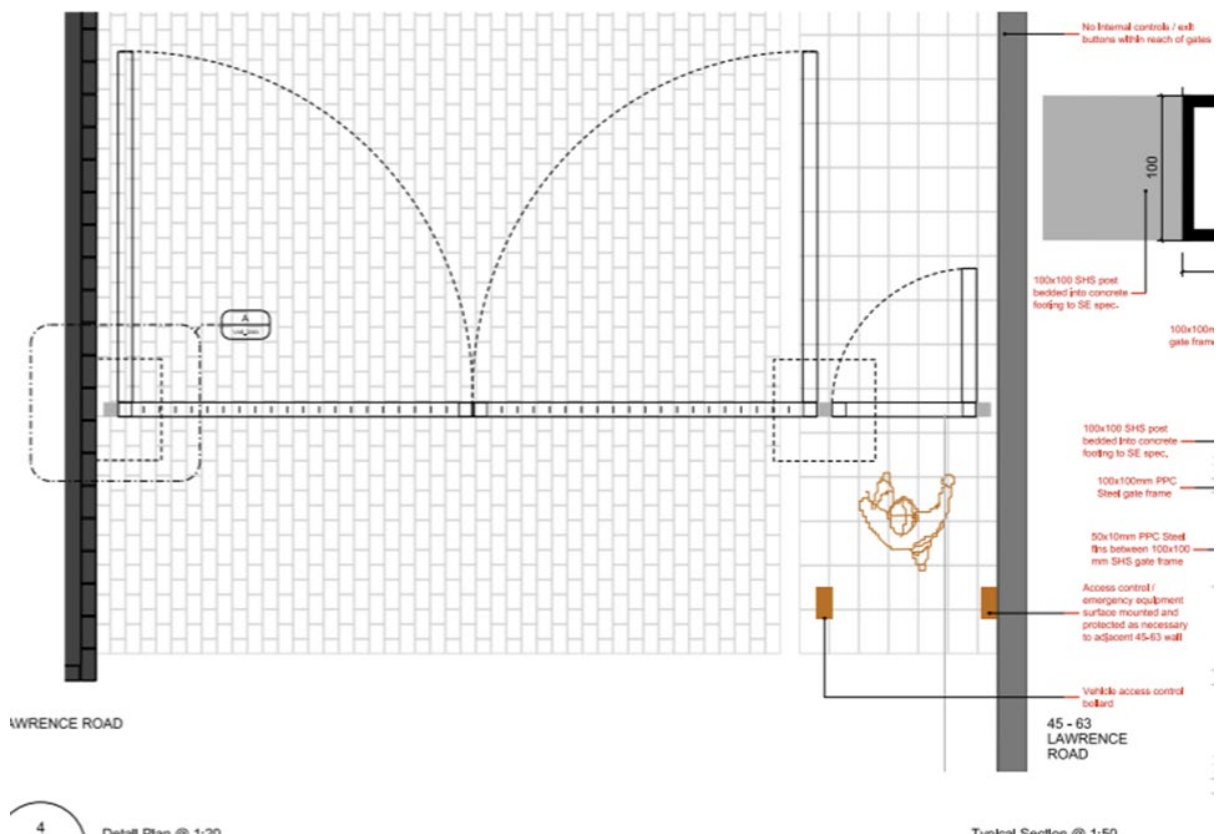

The attached DAS section and plan relate to the development at 45-63 Lawrence Road for point f).

b) *I am very happy with the design of the pedestal. However, the plan*

"LR2_VAB_AA_00_DR_A_3501_.pdf" shows two pedestals, one for each development; surely the two developments can share a single pedestal!

Only 1 pedestal is provided for vehicle access and for use by both schemes (labelled "Vehicle access control bollard" below)

The second rectangle is wall mounted for the pedestrian gate and again is for use by both schemes (labelled "Access control emergency equipment surface mounted and protected as necessary to adjacent 45-63 wall" below)

Many thanks,

Lucy
