

I have a big cedar tree that unfortunately has been dying over the last few years and now it's completely dead the address is 1 North grove, N6 4SH.

The client has decided not to do anything with it for a few years as they were hoping that it might miraculously come back to life, but unfortunately it hasn't just wondering if we could fast track this as I would rather do it sooner rather than later due to it being dead and dangerous.

I will attach a photo below.

Thanks,

Junior
