

Our BPXA seed mix is the mix that Haringey have previously agreed (please see attached). Plug plants come from the same mix but we have to use what is available unless we contract grow so sometimes the amount of species is less than in the seed mix – particularly if the roof spaces are small.

The list of plug plants that we supplied previously in Haringey was:

Bladder Campion x 100

Cowslip x 100

Dog Violet x 100

Hoary Plantain - NA

Kidney Vetch x 200

*Black (Common)
knapweed x 100*

Lady's Bedstraw x 100

Dark Mullein x 100

Ragged Robin x 100

Radicata - Cats Ear x 100

Rough Hawkbit x 100

Sainfoin x 100

Salad Burnet x 100

Selfheal x 100

Birds Foot Trefoil x 200

Wild Marjoram x 100

Wild Thyme x 100

Autumn Hawkbit x 100

Areas: Rough area of green roof including what is under the PV panels is approx. 365m² for Block A3 and 490m² for Block C1 so this gives us the approx. amounts that we will need in terms of seeds and plug plants. At Remington you laid 75% of the area using seeds and 25% using plug plants.

Biodiverse Habitats:

Our Bio diverse Bulk Bags contain material to make 2 biodiverse habitats of each type: Log piles, Large Cobble stone piles; 0.5m high sand areas.

1sqm of rope coils and pebble mounds of water trays.

Block A3: Approx: 365m² green less PV area of 180m² = 185m². SO: 2 x biodiverse bulk bags + 2 rope coils.

Block C1: Approx 490m² green less PV area of 100m² = 390m². SO: 4 x Biodiverse bulk bags + 4 rope coils.
