1. Non-Technical Summary

1.1.1. The site is located at Highgate Mallinson Sports Centre, Bishopswood Road, London, N6 4PB.

1.1.2. The site is currently occupied by a fives courts building, a pool hall, squash courts and a sports hall which are surrounded by soft landscaping. There are no existing basements.

1.1.3. The proposed development will take place over four Phases and will comprise the demolition of the fives courts, squash courts, part of the pool building and areas of hardstanding, construction of a second sports hall in place of the old fives courts and squash courts, and construction of new fives courts adjacent to the existing sports hall. The new sports hall and fives courts will include basements of 3.7 and 4.0m depth respectively.

1.1.4. A 1.5m-deep flood storage basin will be constructed to the east of the site which is designed to receive surface water flowing overland from the upstream catchment area. Hydraulic modelling supporting the design has been carried out by Edenvale Young.

1.1.5. The excavation is proposed to be retained by a contiguous piled wall.

1.1.6. The bulk excavation works, and construction of permanent works elements will take place following the installation of the contiguous pile wall.

1.1.7. Temporary propping / shoring measures may be required at ground level, prior to proceeding with bulk excavation works.

1.1.8. The following assessments are presented in the current document:

- Screening.
- Scoping.
- Additional evidence/assessments (as required), including:
- Architectural and structural drawings.
- Ground movement assessment.
- Basement impact assessment.

1.1.9. The ground model for the site comprises:

- Made Ground to a depth of 0.3m below ground level (bgl),
- Head Deposits to a depth of 2.4mbgl,
- Claygate Member to a maximum depth of 7.5mbgl,
- The London Clay Formation to a depth of >20.0m. The thickness and base of this stratum has not been proven; however, the strata below are not considered to be of engineering significance to the scheme as the anticipated *zone of influence* of the proposed works will remain within the London Clay Formation.

1.1.10. The hydrogeological conditions at the site, relevant to the proposed development, are anticipated to comprise:

- Groundwater within the Head Deposits at approximately 1.8mbgl to 1.6mbgl at the location of the proposed development. It is noted that the boreholes surrounding the proposed sports hall were dry during drilling, other than BH2 which had a water inflow at 3.6mbgl, rising to 3.1mbgl after 20 minutes.
- Groundwater generally at 1.2 to 1.8mbgl across the wider site.
- Potential for flooding at the area surrounding the proposed flood storage basin (the Orchard). Objections made to the planning submission state that the area becomes waterlogged during winter.
- Groundwater flow direction to the northwest.

- A hydrostatic porewater pressure distribution within the Head Deposits, Claygate Member and London Clay Formation.

1.1.11. The BIA has assessed land stability, and the impacts of the proposed development on neighbouring structures will be limited to Category 1 – Very Slight, in accordance with the Burland Damage Scale.

1.1.12. The BIA has identified that the site is underlain by the Head Deposits and the Claygate Member which are secondary A aquifers.

2. Introduction

2.1.1. A-squared Studio Engineers Limited (A-squared) has been engaged by Pringuer-James Consulting Engineers Limited (PJCE) on behalf of Highgate School to prepare a Basement Impact Assessment (BIA) for the proposed development at Highgate Mallinson Sports Centre, Bishopswood Road, London, N6 4PB.

2.1.2. The purpose of this assessment is to consider the potential effects of the design on the local hydrology, geology, and hydrogeology, and to determine the potential impacts to neighbours and the wider environment.

2.1.3. The location of the proposed development is shown in Figure 2.1, and a plan of the wider site including the flood storage basin is presented in Figure 2.2.

Approximate site boundary marked by red line.

Figure 2.1 Location of the proposed development

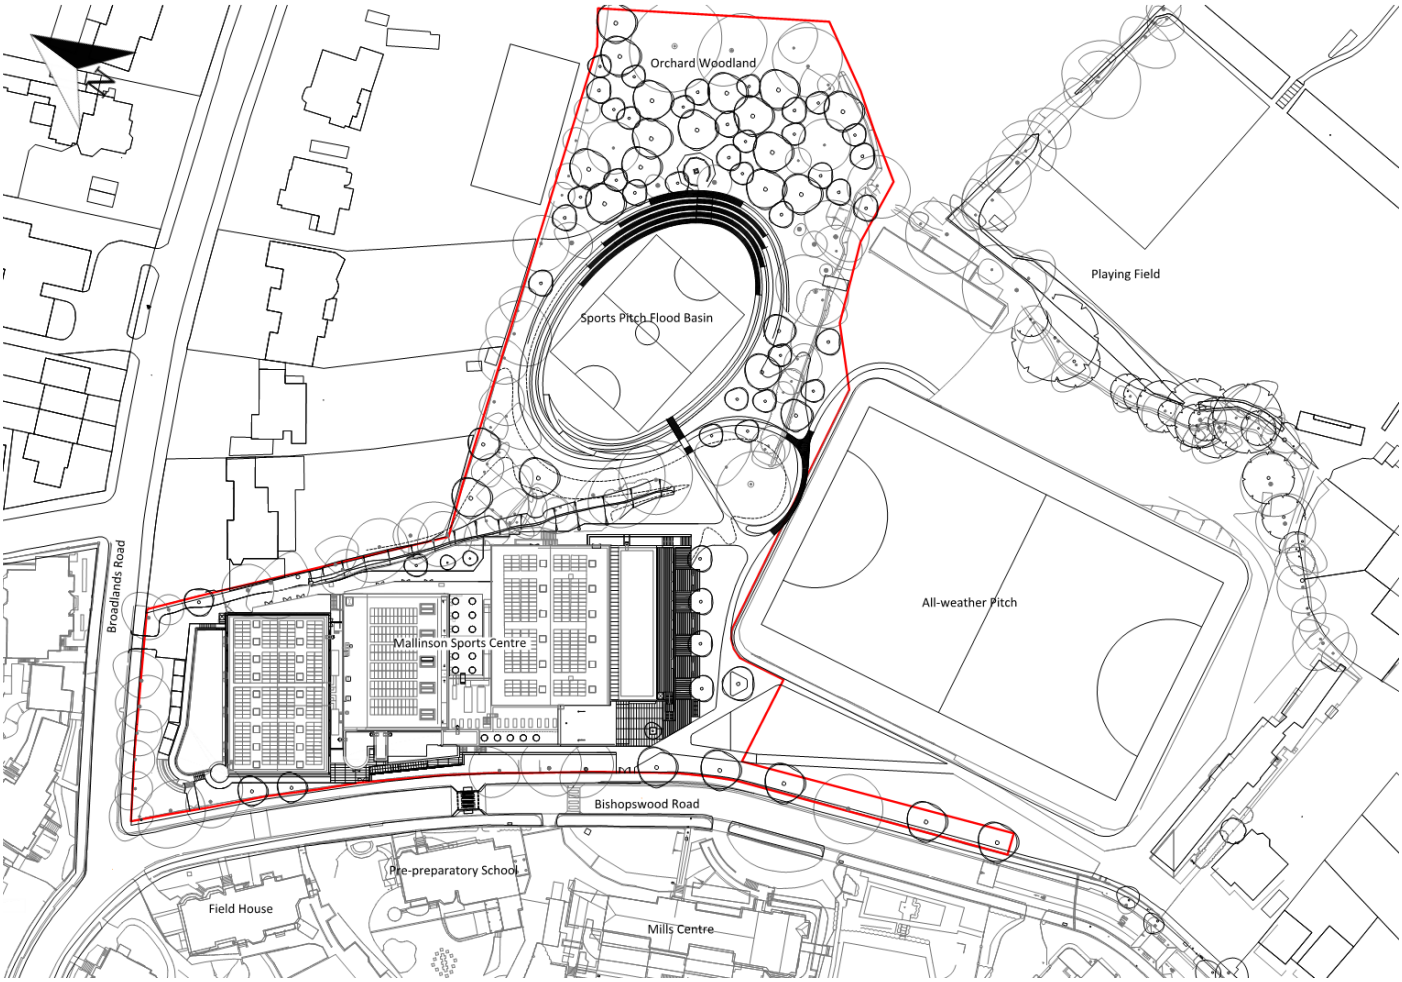

Figure 2.2 Wider site plan

2.1.4. The development site is located within the London Borough of Haringey.

2.1.5. The BIA comprises the following elements:

- Screening.
- Scoping.
- Additional evidence/assessments (as required), including:
  - Architectural and structural drawings.
  - Ground movement assessment (GMA).
  - Basement Impact Assessment.

2.2. Credentials

2.2.1. The BIA has been approved by Alex Nikolic. Alex is a Chartered Member of the Institution of Civil Engineers (MICE) with over 20 years of industry experience in geotechnical design and construction of ground engineering works. Alex has attained post-graduate qualifications, including a Master of Science in Soil Mechanics (MSc DIC) from the Imperial College London and a Master of Studies (MSt Cantab) in Sustainable Development from the University of Cambridge. Alex was formerly the Director of Ground Engineering at Buro Happold Ltd.

2.2.2. The BIA has been reviewed by Neil Morris. Neil is a Chartered Geologist, and a Registered Ground Engineering Adviser (RoGEP) with a specialism in geo-environmental engineering and contaminated land assessment, having 25 years of industry experience. Neil has a postgraduate MSc in Environmental Geotechnology, and BSc in Environmental & Resource Science, and is currently serving as part time visiting lecturer at the University of Hertfordshire.

2.3. Sources of Information

2.3.1. The following baseline data has been referenced to complete the BIA in relation to the proposed development:

- *Highgate School MSC 4Phase Landscape strategy report* prepared by Robert Myres Associates, dated June 2022 (ref. 733.01(RP)001).
- *Flood Risk Assessment: Highgate School* prepared by Edenvale Young, dated June 2024.
- *Site Investigation Report* prepared by Soil Consultants, dated February 2016 (ref. 9916/JRCH/OT).
- *Report on Supplementary Ground Investigation* prepared by Soil Consultants, dated February 2019 (ref. 9916A/MR.JRCB).
- *Factual Report on Ground Preliminary Investigation* prepared by Soil Consultants, dated February 2024 (ref. 10930/OS)
- Additional borehole logs and groundwater monitoring data supplied by Soil Consultants, dated August 2024.
- Architectural drawings prepared by Ed Toovey Architects, dated August 2018.
- Landscape architecture drawings prepared by Robert Myres Associates, dated July 2022.
- SuDS Strategy Concept prepared by PJCE.
- *Outline Construction Management Plan* prepared by Blue Sky Building, dated August 2024.
- Environment Agency Statutory Main River Map (online).

2.4. Existing Development

2.4.1. The development is located at Highgate Mallinson Sports Centre, Bishopswood Road, London, N6 4PB.

2.4.2. The ground surface elevation of the site ranges from 105.7 to 109.9m above ordnance datum (OD), and ground levels at the proposed basement are approximately 106.8mOD. Ground surface levels in the surrounding area generally fall towards the West with a gradient of approximately 1 in 25.

2.4.3. The site is currently occupied by a fives courts building, a pool hall, squash courts and a sports hall which are surrounded by soft landscaping. There are no existing basements.

2.4.4. The existing building is expected to be founded on a ground bearing raft foundation system.

2.5. Neighbouring Properties and Infrastructure

2.5.1. The existing on-site buildings do not share a party wall with other structures. The closest building to the site is 27 Broadlands Road, approximately 7.0m Northeast of the site boundary.

2.5.2. Asset owners with existing underground services that may be impacted by the proposed development include the following:

- London Borough of Camden and the Greater London Authority.
- Virgin Media Ltd and BT (BT Group Plc) – Telecoms.
- UK Power Networks Ltd and National Grid Electricity Transmissions Plc – Electricity distribution.
- Southern Gas Network and Cadent Gas – Gas.
- Thames Water – Clean and wastewater.

2.5.3. Asset protection teams for the assets listed under Section 2.5.2 will be engaged as the design of the proposed development progresses. Where necessary, separate GMAs will be prepared in order to meet design assurance requirements.

2.6. Proposed Development

2.6.1. Structural drawings of the proposed development are included in Appendix A.

2.6.2. The proposed development comprises the demolition of the fives courts, squash courts, part of the pool building and areas of hardstanding, construction of a second sports hall in place of the old fives courts and squash courts, and construction of new fives courts adjacent to the existing sports hall. Demolition plans and proposed ground floor plans are presented in Figure 2.3 and Figure 2.4 respectively. The development will be carried out in five phases which are marked on the proposed ground floor plan in Figure 2.4.

2.6.3. Two basements are proposed as part of the development. The first is an approximately 4.0m-deep basement and will form the new fives court (Phase 2A), adjacent to the existing sports hall. The second will form the new sports hall to the North (Phase 2B), directly adjacent to the existing pool hall block and is approximately 3.7m-deep. Both excavations will be supported by contiguous piled walls with internal in-situ RC lining walls, except for the Southern edge of the new fives courts, which will be supported by in-situ RC retaining walls. Both basement areas are proposed to be supported by an RC ground-bearing raft system with tension piles to restrict uplift forces on the basement box.

2.6.4. A 1.5m-deep flood storage basin will be constructed to the east of the site in which is designed to receive surface water flowing overland from the upstream catchment area. Drawings of the flood storage basin are included in Appendix B.

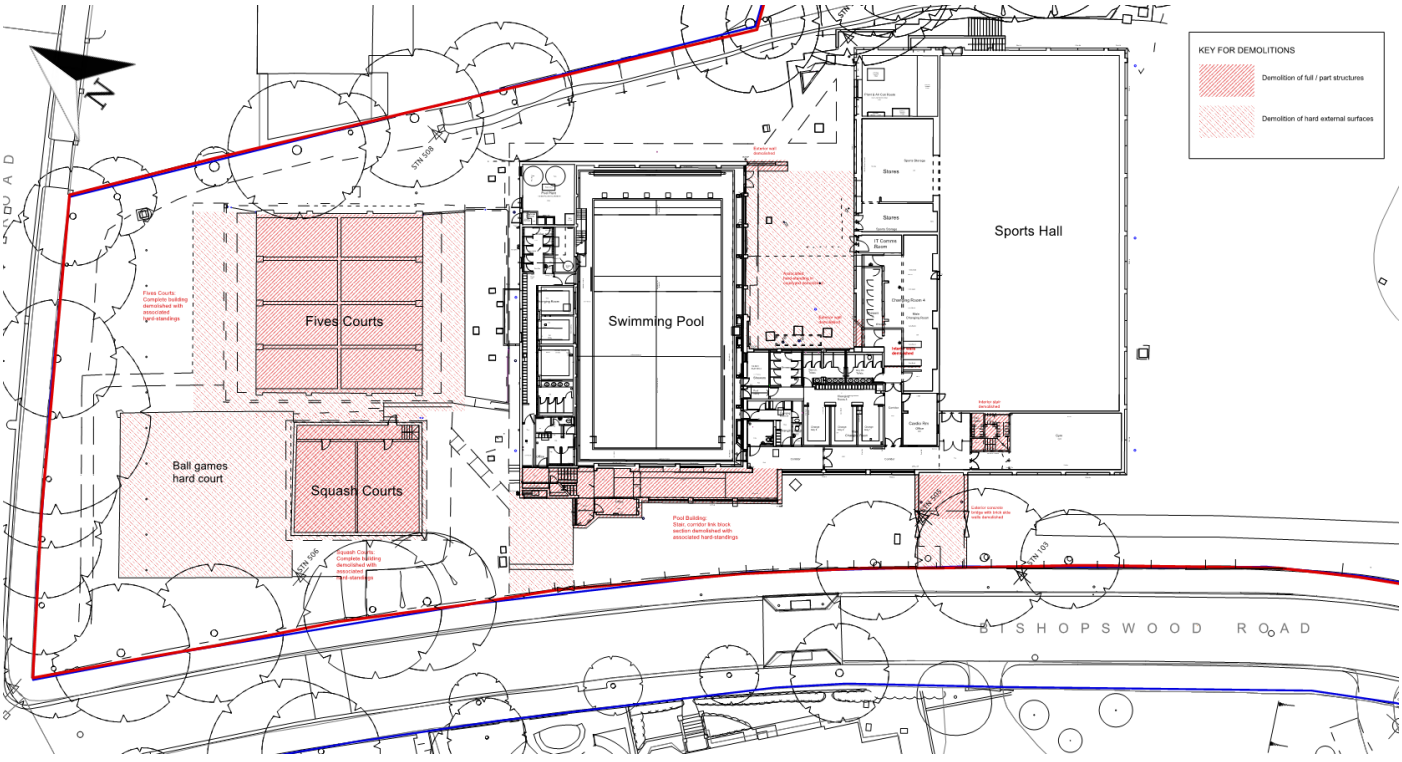

Figure 2.3 Demolition plan

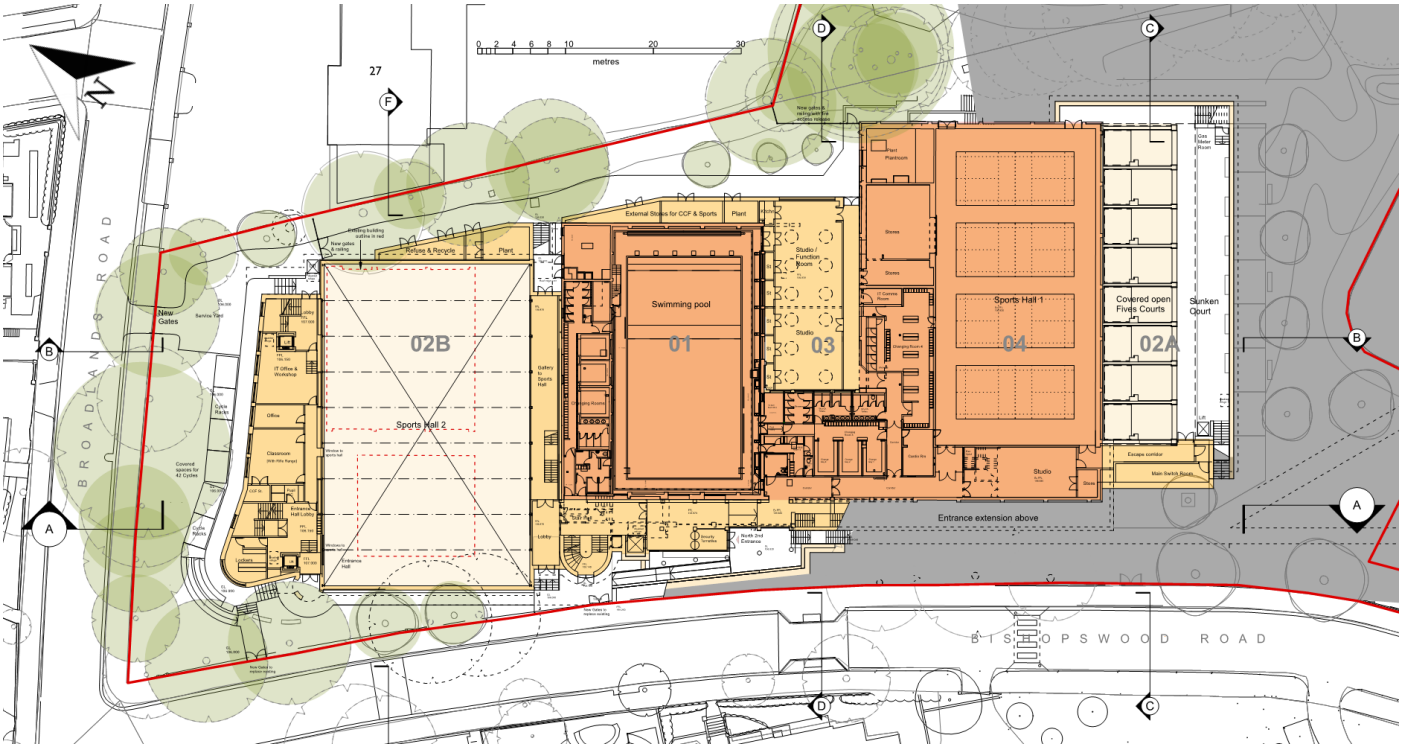

Figure 2.4 Proposed ground floor plan

3. Desk Study

3.1.1. A Phase I Desk Study has been undertaken for the site and has been used to inform this BIA. The Desk Study informs further actions in relation to site investigation and ground contamination risks. The desk study is appended to the site investigation report which is included in Appendix C.

4. Screening

4.1. Subterranean (Groundwater) Flow, Screening Flowchart

	Question	Response	Details
1a.	Is the site located directly above an aquifer?	Yes	The site is underlain by the Head Deposits and Claygate Member which are secondary A aquifers.
1b.	Will the proposed basement extend beneath the water table surface?	Yes	The proposed basement will extend to a maximum depth of 4.0mbgl, approximately 2.0m below the water table surface.
2.	Is the site within 100m of a watercourse, well (used / disused) or potential spring line?	No	The nearest watercourse is a secondary river 320m Southwest of the site.
3.	Will the proposed basement development result in a change in the proportion of the hard surfaced / paved areas?	Yes	There will be an increase in the portion of hardstanding as part of the proposed development.
4.	As part of the site drainage, will more surface water (e.g. rainfall and run-off) than at present be discharged to the ground (e.g. via soakaways and / or SUDS)?	No	The existing drainage system for the site is assumed to drain freely into the local authority drainage network. It is not anticipated that the proposed development will increase discharge into the ground.
5.	Is the lowest point of the proposed excavation (allowing for any drainage and foundation space under the basement floor) close to, or lower than, the mean water level in any local pond or spring line?	No	There are no ponds or spring lines within the vicinity of the site.

4.2. Stability Screening Flow Chart

	Question	Response	Details
1.	Does the existing site include slopes, natural or man-made, greater than 7 degrees (approximately 1 in 8)?	No	The greatest gradient of slope in the site and surrounding areas is approximately 1 in 25.
2.	Will the proposed re-profiling or landscaping at the site change slopes at the property boundary to more than 7 degrees (approximately 1 in 8)?	No	There will be no reprofiling as part of the proposed development.
3.	Does the development neighbour land, including railway cuttings and the like, with a slope greater than 7 degrees (approximately 1 in 8)?	No	The greatest gradient of slope in the site and surrounding areas is approximately 4 degrees.
4.	Is the site within a wider hillside setting in which the general slope is greater than 7 degrees (approximately 1 in 8)?	No	The greatest gradient of slope in the site and surrounding areas is approximately 4 degrees.
5.	Is the London Clay the shallowest strata at the site?	No	The shallowest stratum at the site is the Head Deposits.
6.	Will any trees be felled as part of the development and/or are any works proposed within any tree protection zones where trees are to be retained?	Yes	Trees will be felled as part of the proposed development.
7.	Is there a history of seasonal shrink-swell subsidence in the local area and/or evidence of such effects at the site?	No	The London Clay Formation is classified as having a high-volume change potential, however there is no evidence of shrink-swell behaviour or desiccated soils on site. The shallowest stratum, the Claygate Member, has been

	Question	Response	Details
			determined to be a low to medium plasticity material through laboratory testing.
8.	Is the site within 100m of a watercourse or a potential spring line?	No	The nearest watercourse is a secondary river 320m Southwest of the site.
9.	Is the site within an area of previously worked ground?	No	The site is not considered to be within an area of previously worked ground.
10.	Is the site within an aquifer? If so, will the proposed basement extend beneath the water table such that dewatering may be required during construction?	Yes	The site is located above the Head Deposits and Claygate Member which are secondary A aquifers.
11.	Is the site within 5m of a highway or pedestrian right of way?	Yes	There will be an increase in the portion of hardstanding as part of the proposed development.
12.	Will the proposed basement significantly increase the differential depth of foundations relative to neighbouring properties?	Unknown	The depth of foundations of the neighbouring properties is unknown.
13.	Is the site over (or within the exclusion zone of) any tunnels, e.g. railway lines?	No	The site is not within the exclusion zone of any tunnels.

4.3. Surface Water and Flooding Screening Flowchart

	Question	Response	Details
1.	As part of the proposed site drainage, will surface water flows (e.g. volume of rainfall and peak run-off) be materially changed from the existing route?	Yes	Surface water flow may be materially changed from the existing route via the flood storage basin.
2.	Will the proposed basement development result in a change in the proportion of hard surfaced / paved external areas?	Yes	There will be an increase in the portion of hardstanding as part of the proposed development.
3.	Will the proposed basement result in changes to the profile of the inflows (instantaneous and long-term) of surface water being received by adjacent properties or downstream watercourses?	Yes	The proposed development comprises the construction of the flood storage basin which will result in a change to the profile of inflows or surface water being received by adjacent properties.
4.	Will the proposed basement result in changes to the quality of surface water being received by adjacent properties or downstream watercourses?	No	There will be no change to the quality of surface water being received by adjacent properties.
5.	Is the site in an area identified to have surface water flood risk according to either the Local Flood Risk Management Strategy or the Strategic Flood Risk Assessment or is it at risk from flooding, for example because the proposed basement is below the static water level of nearby surface water feature?	Yes	A Surface Water Modelling Report has been prepared by Edenvale Young, which concluded that the site is susceptible to surface water flooding.

4.4. Non-technical Summary of Screening Process

4.4.1. The screening process identifies the following issues to be carried forward to scoping for further assessment:

- The site is located directly above an aquifer.
- The proposed basement will extend beneath the water table surface.
- Trees will be felled as part of the development

- The site is within an aquifer and dewatering may be required during construction.
- The proposed basement may increase the differential depth of foundations relative to neighbouring properties.
- Surface water flows (e.g. volume of rainfall and peak run-off) may be materially changed from the existing route.
- The proposed basement may result in changes to the profile of the inflows (instantaneous and long-term) of surface water being received by adjacent properties or downstream watercourses.
- The site is in an area identified to have surface water flood risk according to either the Local Flood Risk Management Strategy or the Strategic Flood Risk Assessment.
- The proposed basement development result in a change in the proportion of hard surfaced / paved external areas.

4.4.2. The other potential concerns considered in the screening process have been demonstrated to be not applicable or not significant when applied to the proposed development.

5. Scoping

5.1. Stability and Subterranean Flow: The proposed development is located above an aquifer; the basement will extend below the water table; the proposed development may significantly increase the depth of foundations relative to the neighbouring properties and there will be a change in the proportion or hard surfaces / paved areas.

Hazards

5.1.1. An increase and/or decrease in groundwater levels surrounding the site.

5.1.2. A change in the groundwater flow regime.

5.1.3. Construction within a potentially water-bearing stratum.

5.1.4. Excavation near a neighbouring property.

Potential Impacts

5.1.5. Flooding of neighbouring properties.

5.1.6. Additional uplift and/or settlement of neighbouring properties due to changes in groundwater level.

5.1.7. Ground movements at neighbouring properties due to excavation & retaining wall installation.

Mitigating Factors

5.1.8. The Claygate Member at the location of the site is a cohesive material. Any groundwater detected during site investigation is likely perched water within sandy horizons of this unit and is not able to maintain any significant groundwater flow.

5.1.9. A ground movement assessment has been undertaken which has conservatively assumed that the neighbouring buildings are founded at ground level in the absence of specific information. All neighbouring facades have been assessed to experience a damage category of Category 1 or less as a result of the proposed development.

5.1.10. A hydrogeological assessment has been undertaken for the proposed development, included as Appendix H, which predicts a rise in groundwater of 77mm and a fall of 53mm at the location of the neighbouring properties. This is considered to be negligible in terms of flood risk and ground movements.

Assessments and Further Actions

5.1.11. Due to the conservative assumptions and nature of analysis of the GMA and results of the hydrogeological assessment, no further assessment is deemed to be necessary.

5.2. Stability: Trees will be felled as part of the proposed development.

Hazards

5.2.1. Swelling / heave effects due to the removal of trees.

5.2.2. Increased surface water into the local drainage system due to a reduction in uptake from vegetation.

Potential Impacts

5.2.3. Additional ground instability resulting from the removal of trees.

5.2.4. Properties downstream of the proposed development may be subjected to an increase in surface water flow.

Mitigating Factors

5.2.5. Using the BRE412 method, there is little evidence of desiccation of the soil on site. There are five out of 18 GI locations where $w<0.4w_L$, three of which are at depths of >13.5m which would be out of the zone of water uptake of any trees.

5.2.6. The proposed development will comprise a ground bearing raft with tension piles which will act as a heave mitigation measure.

5.2.7. Any potential changes to the surface water run-off volume are anticipated to be mitigated by the proposed robust drainage system.

5.2.8. The shallowest stratum, the Claygate Member is a low to medium plasticity material.

Assessments and Further Actions

5.2.9. The neighbouring properties sit outside of the root zone of any trees which are to be felled. In addition to this, the neighbouring properties are at a lower elevation than the trees due to the sloped nature of the site and there is little evidence of desiccation of the soil on site (using the BRE412 method). The impact of the removal of trees on the neighbouring properties is expected to be insignificant.

5.2.10. The arboriculturist has been consulted regarding the felling of trees, who has concluded that the impact of felling the trees will have little to no impact on the proposed development. A letter stating this is included in Appendix D.

5.3. Stability: The proposed development is located above an aquifer, the proposed development may significantly increase the depth of foundations relative to the neighbouring properties & the site is located within 5m of a public highway.

Hazards

5.3.1. Excavation near neighbouring buildings.

5.3.2. The proposed excavation is adjacent to public roads.

Potential Impacts

5.3.3. Collapse of the excavation and associated impact on the surrounding buildings.

5.3.4. Damage to the road surface or buried services within the public road easement due to excessive ground movements.

5.3.5. Ground movements arising due to the construction and excavation of proposed basements may impact neighbouring buildings.

Mitigating Factors

5.3.6. A ground movement assessment has been undertaken which has conservatively assumed that the neighbouring buildings are founded at ground level in the absence of specific information. A wall deflection limit has been defined which the contractor will adhere to, to ensure that the neighbouring buildings experience a damage category of Category 1: Very Slight or less.

5.3.7. Deposits underlying the development are largely natural and are anticipated to be relatively stable i.e. the London Clay Formation.

5.3.8. Many basements of similar depths and scale have been successfully constructed throughout London with similar geological conditions and settings.

5.3.9. The proposed basement is offset from the neighbouring properties and adjacent public roads.

5.3.10. The scheme basement design and temporary works proposals shall be developed in a robust fashion and in line with current industry best practice, in order to limit the impact of ground movements resulting from basement construction.

Assessments and Further Actions

5.3.11. Various additional ground movement assessments may be required to determine the impact of the works on the surrounding buried utilities and other third-party assets surrounding the site. These assessments should confirm anticipated damage categories in accordance with performance limits set by the relevant third-party asset protection teams.

5.3.12. The design of the retaining walls will be carried out by an appropriately experienced and qualified specialist / engineer / ground engineering contractor in accordance with relevant Eurocodes / British Standards, Codes of Practice, and industry standards. The design will allow for appropriate surcharging behind the embedded walls to accurately reflect the type and intensity of traffic and building loads.

5.3.13. Appropriate ground movement monitoring should be implemented during construction in order to assess the performance of the earth retention system. Allowances should also be made for making good of any cracking / damage to adjacent pavement surfaces (if required). Criteria on which to develop trigger limits are presented in the Ground Movement Assessment.

5.4. Surface Water and Flooding: There will be a change in the portion of hard/paved areas, surface water and inflows may be materially changed from the existing route; the proposed basement may result in changes to the profile of the inflows of surface water being received by adjacent properties or downstream watercourses & the area is identified as being at risk of surface water flooding.

Hazards

5.4.1. An increase in surface water running into neighbouring properties/highways.

5.4.2. A change in the groundwater flow regime.

5.4.3. Development of an area at risk of flooding.

Potential Impacts

5.4.4. Flooding of adjacent properties due to a change in the profile of inflows being received by neighbours.

Mitigating Factors

5.4.5. The flood storage basin may change the profile of surface water, and inflows of surface water being received by neighbouring properties, however it has been designed to intercept and receive water flowing from the upstream catchment area (thus mitigating surface water flood risk); the risk of flooding of neighbouring properties will remain the same or be reduced. This has been supported by hydraulic modelling carried out by Eden Young, included in Appendix D. The following conditions have been assessed:

- Normal conditions (up to the 1 in 30 year +20% Climate Change storm): No Flooding (Dry at surface) – all surface water draining into the Basin is intercepted by the bottom-of-Basin drainage system (filtration trenches and perforated pipe) and conveyed through the Bund and into the receiving ditch via the outlet SW outlet pipe with concrete collars.
- Flood conditions (up to the 1 in 100 year +20% Climate Change storm): Contained Flooding up to 109.0mOD – flood water (volume 2,600m^3) is entirely contained within the Basin, rising up to the Spillway Sill level. All flood water eventually discharges through the Bund and into the receiving ditch via the SW outlet pipe with concrete collars.
- Exceedance conditions (above the 1 in 100 year +20% Climate Change storm): Excess flood water discharges over Spillway – any flooding volume above the design volume (2,600m^3) will discharge over the Spillway Sill, convey down

the Spillway Swale and into the receiving ditch with riprap lining to dissipate energy. The Bund is structurally safe, and the ditch will receive lower flows of water than it would in equivalent storms in its existing configuration (the proposed Bund will reduce flooding in the ditch as well as downstream).

5.4.6. Site-specific ground investigation has confirmed that the Claygate Member and London Clay Formation are the shallowest stratum. Due to their low permeability, they are unable to provide significant drainage and the development is unlikely to alter the site from its current run-off condition, or discharge into the ground.

Assessments and Further Actions

5.4.7. The hydraulic modelling has proven that the flood storage basin and earth bund will perform as intended and there will be a negligible risk of impact to the surrounding surface and ground water flow regime as part of the proposed development. No further assessment is deemed to be necessary.

6. Site Investigation

6.1.1. Site-specific ground investigation has been undertaken by Soil Consultants Ltd in four phases. An initial and supplementary phase were undertaken in February 2016 to investigate the ground conditions surrounding the school buildings, followed by a third phase to investigate the conditions of the flood storage basin area in February 2024. No groundwater monitoring was undertaken as part of these phases of GI, so another phase was undertaken which comprised additional boreholes near the school buildings and proposed flood storage basin, with groundwater monitoring included. The data from the investigation has been used to derive a ground model and geotechnical parameters for the site to inform the ground movement assessment The findings of the site investigation are included as Appendix C.

6.1.2. The locations of the ground investigation positions from the initial and supplementary phases are presented in Figure 6.1 and Figure 6.2 respectively.

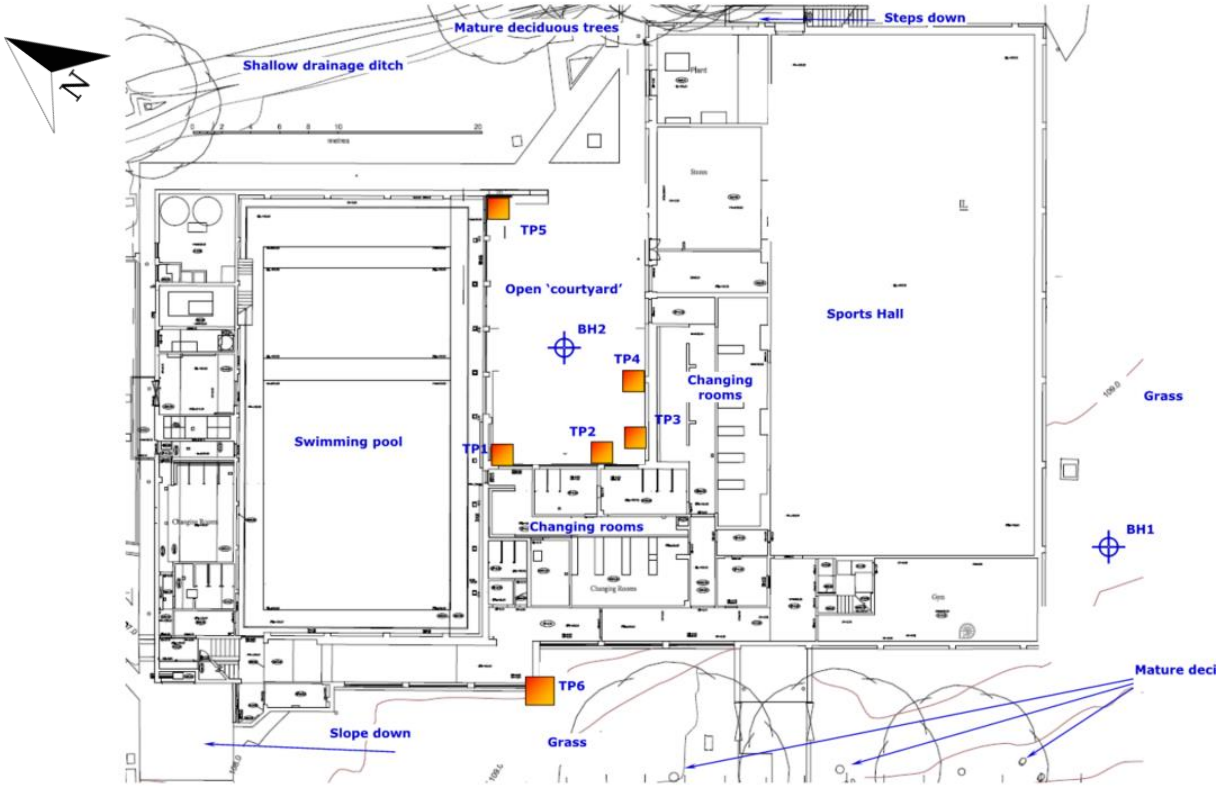

Figure 6.1 Ground investigation locations from the initial phase

Figure 6.2 Ground investigation locations from the supplementary phase

6.1.3. The ground model derived from the site investigation data is presented in Table 6.1.

6.1.4. Groundwater was observed to have a general groundwater flow direction to the northwest.

Table 6.1 Ground model and geotechnical parameters

Stratum	Top of stratum (mOD)	Thickness (m)	Undrained Shear Strength c_u (kPa)	Undrained Young's Modulus, E_u[3][5] (MPa)	Drained Young's Modulus, E'[4] (MPa)
Made Ground	+106.8[1]	0.3	-	-	V: 10.0 H: 10.0
Head Deposits	+106.5	2.1	32.0	V: 16.0 H: 25.6	V: 12.8 H: 20.48
Claygate Member	+104.4	5.1	$32.0 + 17.4z$[6]	V: $16.0 + 8.7z$[6] H: $25.6 + 13.92z$[6]	V: $12.8 + 6.9z$[6] H: $20.48 + 11.14z$[6]
London Clay Formation	+99.3	Unproven	$120.0 + 8.2z$[6]	V: $60.0 + 4.1z$[6] H: $120.0 + 8.2z$[6]	V: $48.0 + 3.3z$[6] H: $96.0 + 6.56z$[6]

1. The ground level adjacent to the proposed basement has been adopted as ground level in the GMA.
2. The ground model and geotechnical parameters have been derived solely for the purposes of this assessment.
3. Vertical undrained Young's Modulus has been derived using the relationship $E_u = 500c_u$.
4. Vertical and horizontal drained Young's Modulus has been derived using the relationship $E' = 0.8E_u$.
5. Horizontal undrained Young's Modulus for the Head Deposits and Claygate Member has been derived using the relationship $E_u = 800c_u$. Horizontal undrained Young's Modulus for the London Clay Formation has been derived using the relationship $E_u = 1000c_u$.
6. z refers to metres below top of stratum.
7. *Rigid boundary* assumed at approximately +34.11mOD for analytical purposes.
8. V: vertical, H: horizontal.

7. Construction Methodology / Engineer Statements

7.1. Outline Temporary and Permanent Works Proposals

7.1.1. The outline basement construction proposal is to construct the basement from top-down sequencing.

7.1.2. Standard means and methods of excavation are expected to be suitable to excavate the basement, based on the ground conditions proven by means of ground investigation works.

7.1.3. The basement excavation will be retained by a contiguous pile wall. The wall is not expected to be load-bearing.

7.1.4. Design of the retaining walls and temporary propping shall be carried out in accordance with the relevant Eurocodes/British Standards, non-conflicting codes of practice, and associated design best practice.

7.1.5. Groundwater control will be implemented through pumping during excavation and injection of an inert material behind the contiguous piled wall, to prevent any locally higher rates of groundwater inflow through finite granular horizons / bands.

7.1.6. The proposed construction sequence is as follows:

- Deconstruct existing structures on site;
- Temporarily divert any services required to ensure other structures on site remain operational.
- Level site and install piling mat;
- Install contiguous piled wall on full perimeter of basement, with rebar not exceeding piling mat level;
- Once concrete has reached full strength within the piles, partially dig down on top of piled wall to allow for construction of capping beam and provide bracing to sides of excavation;
- Clean the top of the piles thoroughly and construct RC capping beam on full perimeter of contiguous piled wall with cast in pipes to allow for later concreting of the lining walls at a later stage;
- Once concrete has reached full strength within the capping beam, dig down entire area within the contiguous piled wall down to foundation formation level;
- Install pilling mat at basement formation level;
- Install piles forming new foundations under proposed main columns, with rebar not exceeding piling mat level;
- Once concrete in foundation piles has reached full strength, dig down to basement slab formation level;
- Construct new basement slab with new thickenings;
- Once concrete has reached full strength in basement slab, install proposed main columns on top of basement slab with temporary props;
- Install proposed timber ground floor and remove temporary props of main timber columns;
- Install superstructure above;

7.2. Ground Movement and Damage Impact Assessment

7.2.1. A GMA has been carried out in accordance with CIRIA C760 and takes into account the construction methodology and preliminary site-specific ground and groundwater conditions. The ground movement assessment is included in Appendix F.

7.2.2. All structures / properties within the zone of influence of the proposed development have been assessed.

7.2.3. The following assumptions have been made within the GMA:

- The basement will be retained by a 450mm diameter contiguous piled wall at 600mm c/c.
- The buildings adjacent to the site included in the GMA are assumed to be founded on ground surface to provide a conservative assessment.
- The walls of the above-mentioned buildings are assumed to behave as equivalent beams.

- The basement will be largely unpropped in the permanent condition.
- The contiguous piled wall has a length of 7.8m. The wall is not expected to be load bearing.

7.2.4. The ground movements resulting from the works comprise deformations arising from the following mechanisms:

- Installation of the contiguous pile wall.
- Bulk excavation works.
- Heave and settlement of the Claygate Member and London Clay Formation due to unloading / load redistribution / loading.

7.2.5. The assessed facades in the XDisp model are shown in Figure 7.1.

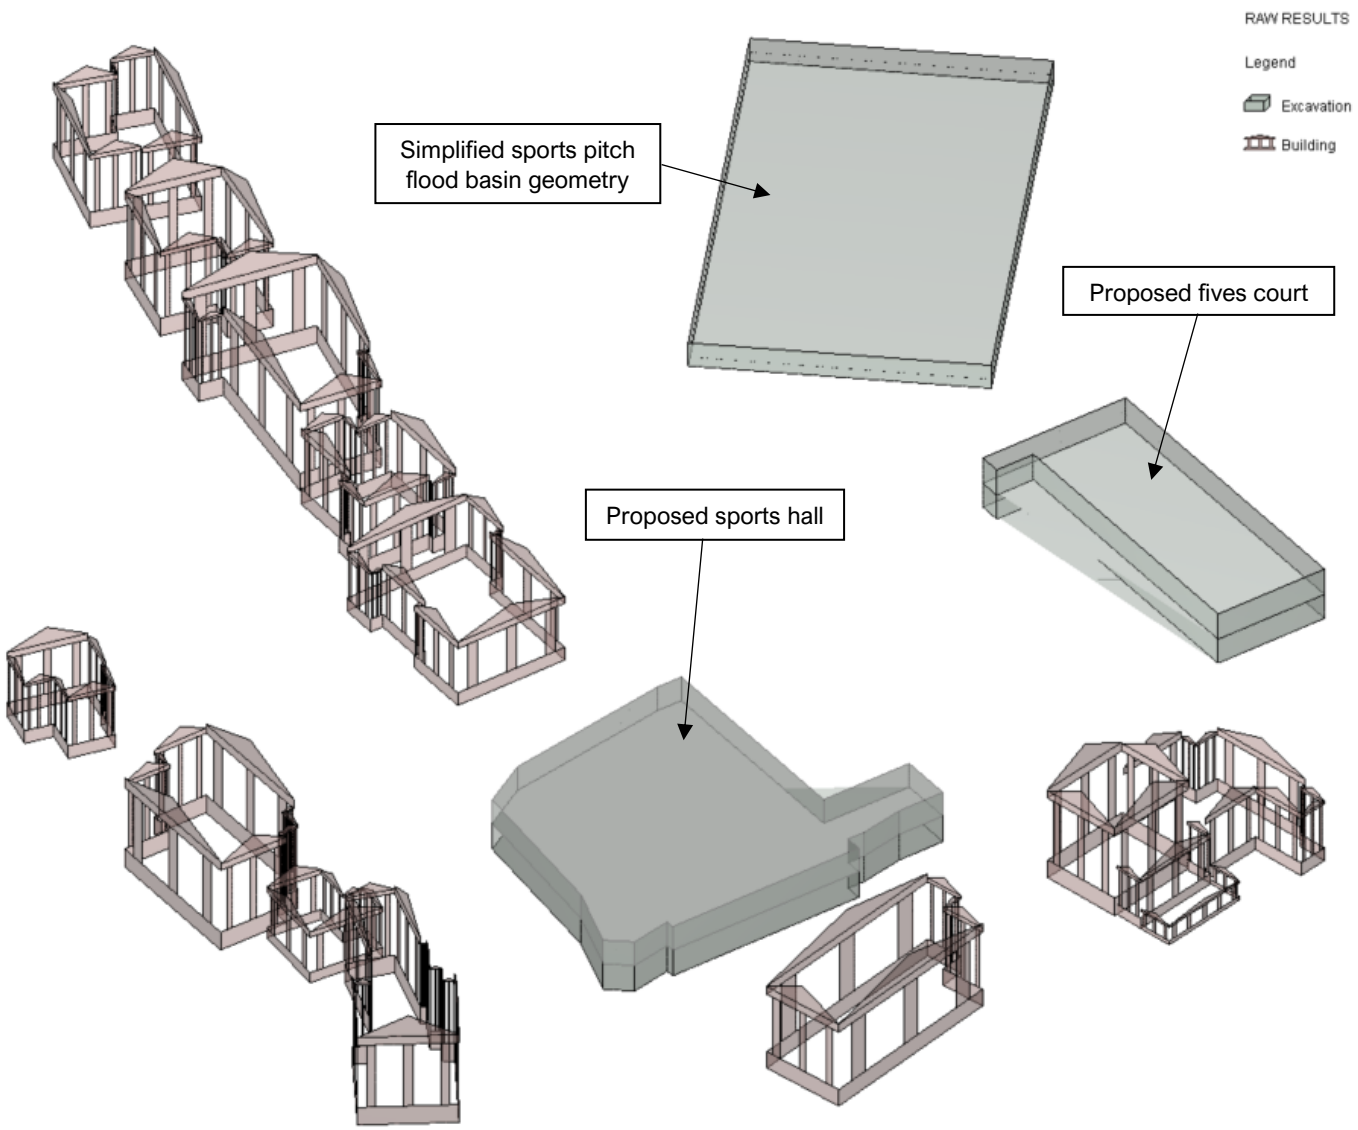

Figure 7.1 Indicative plot of three-dimensional analytical model in XDisp

7.2.6. The following mitigation measures are proposed to reduce ground movements and damage:

- Design of the contiguous pile wall and open-cut excavations shall be carried out in accordance with the relevant Eurocodes, non-conflicting codes of practice, and associated design best practice.
- Retaining wall construction to be performed by an experienced ground engineering contractor.

- Frequent monitoring of neighbouring properties to be carried out during excavation, to validate ground movement predictions against reality.
- Development of a monitoring-trigger-action plan that identifies trigger levels, responsible personnel and actions to be followed in the event of a trigger level exceedance.
- Designated areas for stacking and storing materials behind the embedded retaining wall should be identified. These should be located away from sensitive structures. The design of the retaining wall should incorporate an appropriate surcharge load to the rear of the wall, to capture effects of stacking and storing materials, vehicle traffic, etc.

7.2.7. It should also be noted than this GMA considers adjacent properties and does not assess the impact of the works on buried utilities. There remains the possibility that further propping measures may be required to safeguard such assets. Additional scheme GMAs will need to be performed in order to review the impact of the scheme on various third-party assets, such as Thames Water, at an early stage of the design development. These assessments will be brought forward post-planning and further refined based on the ongoing scheme development, prior to issue to the relevant asset protection teams, for review and approval ahead of construction work commencement.

7.2.8. It is recommended that ground movement / earth retention system design and construction movement criteria are developed based on the results presented in the Ground Movement Assessment report. This will enable the design of the retaining wall and any required temporary propping measures to be undertaken in a holistic fashion, ensuring ground movements are limited to no greater than that presented in the report.

7.2.9. Specific wall/façade deflection limits and trigger levels may also be developed as part of the scheme monitoring regime. Such limits and trigger levels should be coordinated with the scheme monitoring specification and monitoring action plan / emergency preparedness plan.

7.2.10. The proposed basement walls have been analysed in WALLAP which has demonstrated that the wall deflection during the excavation stage will be less than those predicted by the GMA. The wall calculations are included in Appendix G.

8. Basement Impact Assessment

8.1. General

8.1.1. The Conceptual Site Model (CSM) is described below:

- The ground conditions of the site comprise Made Ground over Claygate Member and the London Clay Formation.
- Groundwater within the Head Deposits at approximately 1.8mbgl to 1.6mbgl at the location of the proposed development. It is noted that the boreholes surrounding the proposed sports hall were dry during drilling, other than BH2 which had a water inflow at 3.6mbgl, rising to 3.1mbgl after 20 minutes.
- Groundwater generally at 1.8 to 1.2mbgl across the wider site.
- Potential for flooding at the area surrounding the proposed flood storage basin (the Orchard). Objections made to planning state that the area becomes waterlogged during winter.
- Groundwater flow direction to the northwest.
- The areas surrounding the site are gently sloped and fall towards the West with a gradient of approximately 1 in 25.
- The site is currently occupied by a fives courts building, a pool hall, squash courts and a sports hall which are surrounded by soft landscaping. There are no existing basements.
- The proposed development will take place over four Phases and will comprise the demolition of the fives courts, squash courts, part of the pool building and areas of hardstanding, construction of a second sports hall in place of the old fives courts and squash courts, and construction of new fives courts adjacent to the existing sports hall. The new sports hall will include an approximately 3.7m-deep basement, and the fives court will include an approximately 4.0m-deep basement.
- Foundation depths of the neighbouring buildings are unknown. They have been conservatively assumed to be founded at ground level for the purposes of the Ground Movement Assessment, and at 4mbgl for the hydrogeological assessment.
- The nearest public highway is Bishopswood Road, within 5m from the proposed development.
- The proposed development may result in ground movements in the vicinity of the neighbouring properties and adjoining public highways. These ground movements will be managed by appropriate construction means and methods and controlled excavation operations.

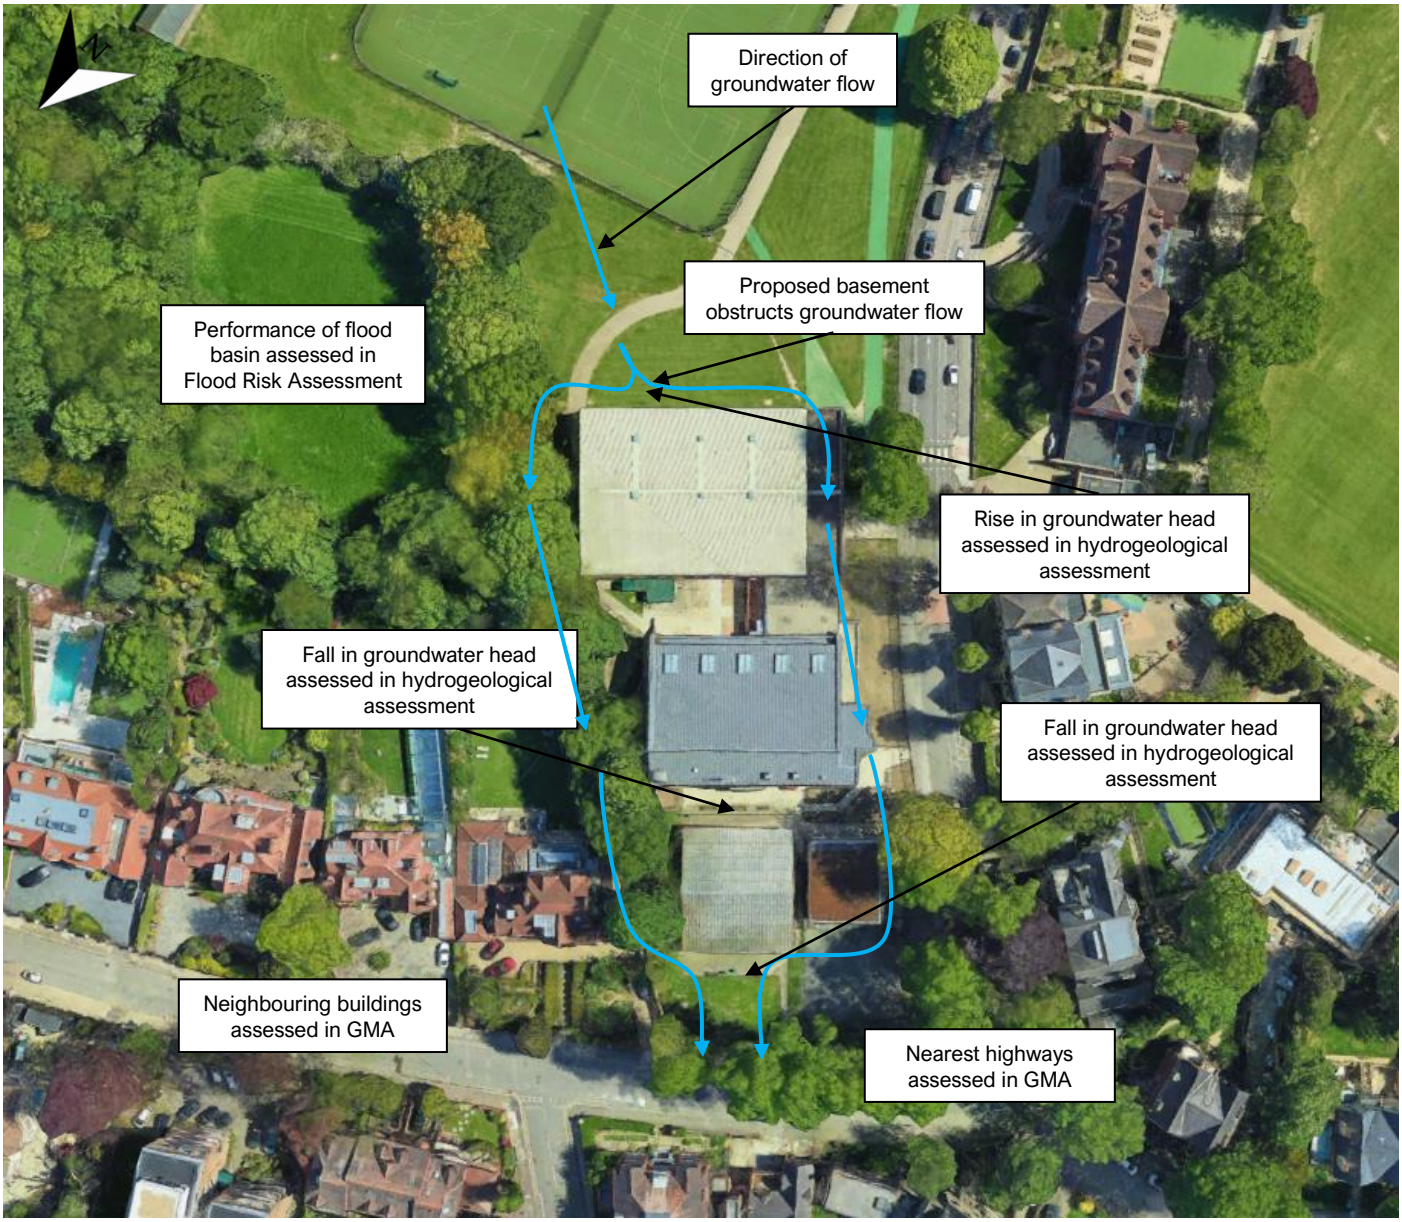

Figure 8.1 Conceptual site model

8.2. Land Stability / Slope Stability

8.2.1. It is assumed that all new substructure elements will be founded in the Head Deposits and Claygate Member which are considered to be a suitable founding stratum.

8.2.2. The ground movement assessment has concluded that ground movements caused by excavation and construction of the proposed development will be limited. The upper bound damage category for surrounding structures within the zone of influence of the proposed development has been assessed as *Category 1 – Very Slight* in accordance with the Burland Scale.

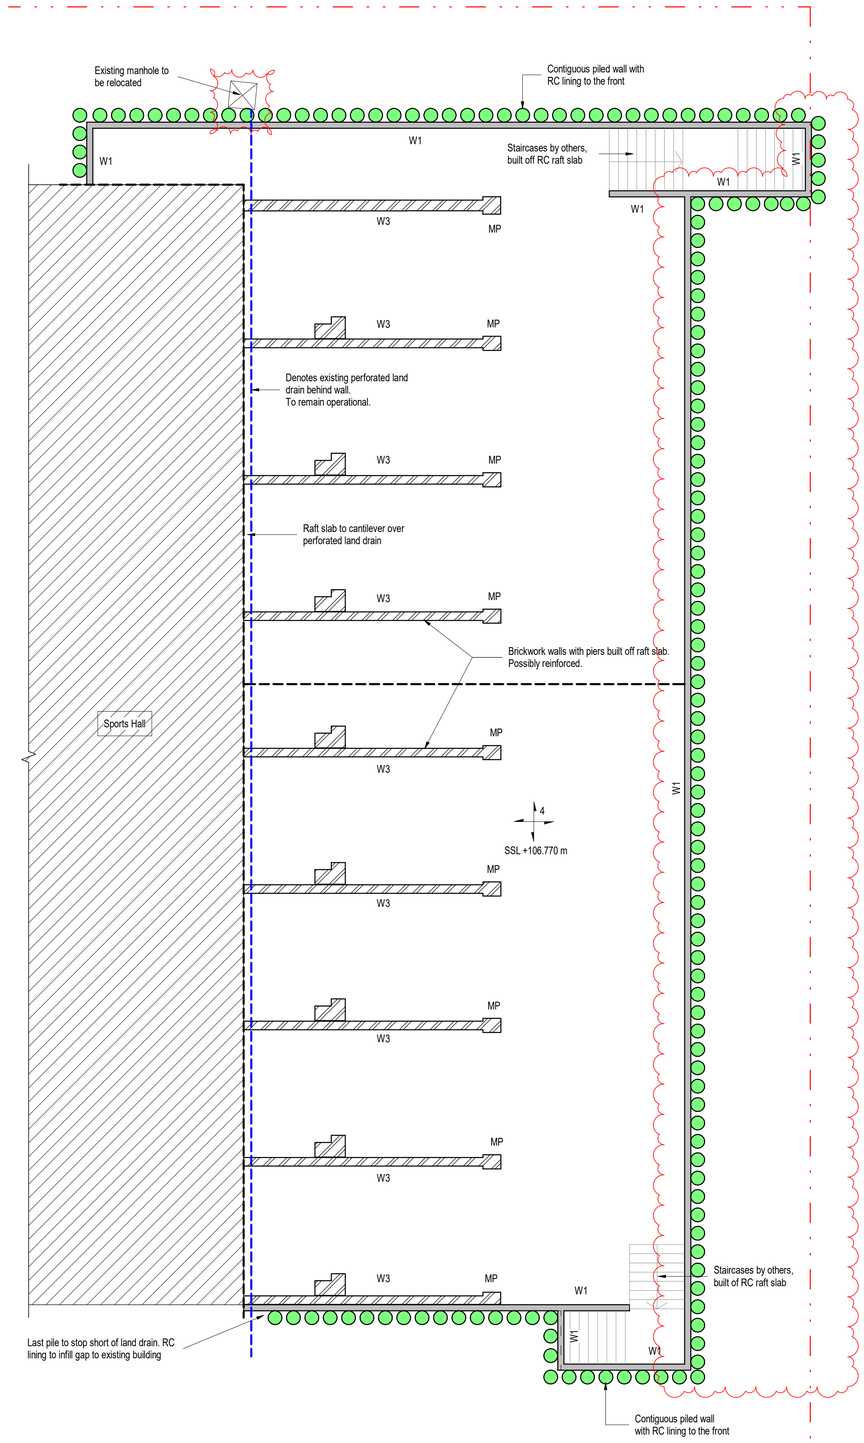
8.2.3. The BIA has concluded that the risks to the adjacent properties, slopes, and infrastructure (including ultimate and serviceability limit state considerations) is limited and will be mitigated in a reasonable fashion as part of design development.

8.3. Hydrogeology and Groundwater Flooding

8.3.1. Groundwater was identified within the Head Deposits at approximately 1.8mbgl (105mOD) and the location of the proposed basement during site investigation with a flow direction to the north west. The groundwater level across the wider site varies from 1.2 to 1.8mbgl.

8.3.2. The area surrounding the proposed flood storage basin (the Orchard) may have the potential to flood during winter months. Objections made to planning state that the area becomes waterlogged during winter.

8.3.3. A hydrogeological assessment has been undertaken which concludes that a rise in groundwater of 77mm and a fall in groundwater of 53mm can be expected due to the construction of the proposed basement.



8.4. Hydrology, Surface Water Flooding and Sewer Flooding

8.4.1. A Surface Water Modelling Report has been prepared by Edenvale Young, which concluded that the site is susceptible to surface water flooding. Surface water will be managed by the construction of the flood storage basin.

8.4.2. The BIA has concluded that there are no impacts to the wider hydrological environment.

8.4.3. For further details of the proposed scheme flood risk mitigation measures reference should be made to the scheme Flood Risk Assessment report, provided in Appendix E.

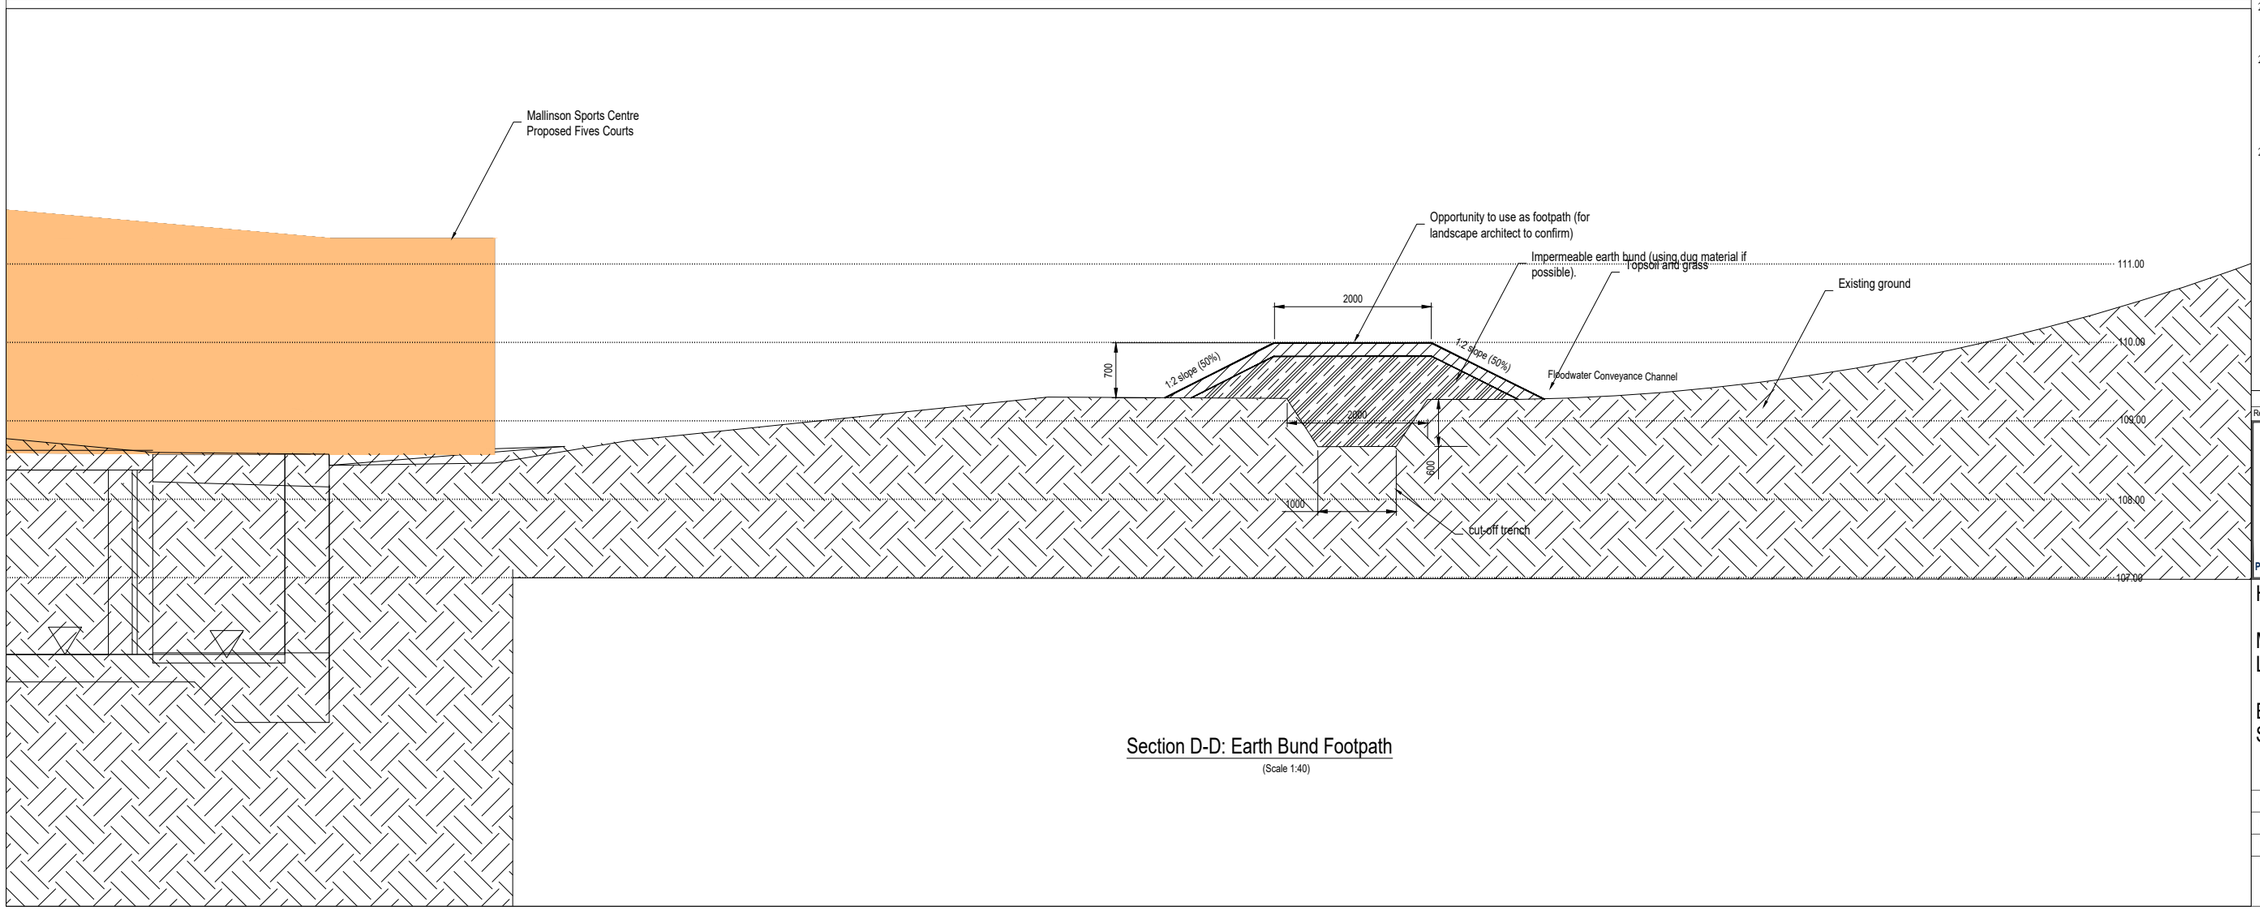
Appendix B: Flood Storage Basin Drawings



Section A-A: Earth Bund Cross-Section

(Scale 1:50)

BH4 - corresponding to the downstream side of the bund crest

Section D-D: Earth Bund Footpath

(Scale 1:40)

Notes:

1. Do not scale from this drawing
2. All dimensions are in millimetres unless otherwise stated.
3. All levels are in metres unless otherwise stated.
4. This drawing should be read in conjunction with all relevant architects, structural engineers and m&e engineers drawings and specification.
5. For setting out of rainwater and foul water drain points refer to architects and M.E.P. drawings.
6. All above ground pipework to MEP specification and design. Refer to MEP package for information. When transitioning materials between above and below ground, use Flexseal flexible drain coupling or other suitable coupling.
7. All stacks and rest bends are CAST IRON to BS EN 844.
8. All pipes below building slab to be CAST IRON to BS EN 844
9. All pipes external to building and those not below the structural slab to be CLAY to BS EN 295, EXCEPT when passing through structure. Any pipe passing through structure to be Cast Iron with appropriate Rocker pipe detailing.
10. All stacks/svp/ are 100Ø U.N.O.
11. All pipes are 100Ø unless noted otherwise.
12. All 100Ø pipes to have minimum gradient 1:40 for foul drainage and 1:100 for storm drainage U.N.O. All 150Ø pipes to have minimum gradient of 1:80 foul and 1:150 storm U.N.O.
13. All pipes below slab to have concrete surround with hangers and lacers as per details provided.
14. Surface water drainage pipework to be as 'wavin osma twin wall system' to bs 4660 & en1401 on class s bedding or similar approved, all installed to manufactures recommendations, unless noted otherwise.
15. All drains are to be laid in a constant gradient between manhole chambers.
16. All buried concrete products and mortars are to contain class 2 sulphate resisting cement.
17. New connection onto existing sewer to be in accordance with Thames Water requirements.
18. All statutory plant/services to be traced in advance to ensure avoidance or damage during installation of new drainage pipes.
19. Contractor to be satisfied of alignment and level of live services prior to any excavations being carried out.
20. Architect & M&E to advise on final positions of SVP pipes in ground floor layout.
21. Upon completion of the works a full set of test records for water tightness and integrity of the whole underground drainage system shall be issued to the employers agent.
22. Five days prior to practical completion the contractor shall also include for arranging and providing a full closed circuit television (cctv) video record on cd showing the condition of the entire below ground drainage system, as installed. A copy of the cd shall be handed to the employers agent. this shall be presented as a separate cost item, all to be agreed with the client.
23. All private drainage to be in accordance with the building regulations approved document "H", british standard BS EN 752, and to the satisfaction of NHBC/local building control section.

Section B-B: Spillway Cross-Section

(Scale 1:30)

Section C-C: Spillway Long-Section

(Scale 1:30)

Notes:

1. Do not scale from this drawing
2. All dimensions are in millimetres unless otherwise stated.
3. All levels are in metres unless otherwise stated.
4. This drawing should be read in conjunction with all relevant architects, structural engineers and m&e engineers drawings and specification.
5. For setting out of rainwater and foul water drain points refer to architects and M.E.P. drawings.
6. All above ground pipework to MEP specification and design. Refer to MEP package for information. When transitioning materials between above and below ground, use Flexseal flexible drain coupling or other suitable coupling.
7. All stacks and rest bends are CAST IRON to BS EN 844.
8. All pipes below building slab to be CAST IRON to BS EN 844
9. All pipes external to building and those not below the structural slab to be CLAY to BS EN 295, EXCEPT when passing through structure. Any pipe passing through structure to be Cast Iron with appropriate Rocker pipe detailing.
10. All stacks/svp/ are 100Ø U.N.O.
11. All pipes are 100Ø unless noted otherwise.
12. All 100Ø pipes to have minimum gradient 1:40 for foul drainage and 1:100 for storm drainage U.N.O. All 150Ø pipes to have minimum gradient of 1:80 foul and 1:150 storm U.N.O.
13. All pipes below slab to have concrete surround with hangers and lacers as per details provided.
14. Surface water drainage pipework to be as 'wavin osma twin wall system' to bs 4660 & en1401 on class s bedding or similar approved, all installed to manufactures recommendations, unless noted otherwise.
15. All drains are to be laid in a constant gradient between manhole chambers.
16. All buried concrete products and mortars are to contain class 2 sulphate resisting cement.
17. New connection onto existing sewer to be in accordance with Thames Water requirements.
18. All statutory plant/services to be traced in advance to ensure avoidance or damage during installation of new drainage pipes.
19. Contractor to be satisfied of alignment and level of live services prior to any excavations being carried out.
20. Architect & M&E to advise on final positions of SVP pipes in ground floor layout.
21. Upon completion of the works a full set of test records for water tightness and integrity of the whole underground drainage system shall be issued to the employers agent.
22. Five days prior to practical completion the contractor shall also include for arranging and providing a full closed circuit television (cctv) video record on cd showing the condition of the entire below ground drainage system, as installed. A copy of the cd shall be handed to the employers agent. this shall be presented as a separate cost item, all to be agreed with the client.
23. All private drainage to be in accordance with the building regulations approved document "H", british standard BS EN 752, and to the satisfaction of NHBC/local building control section.

1.0 INTRODUCTION

Consideration is being given to the extension of the existing Sports Centre, comprising the construction of a new studio/teaching facility and an access-way extension at its main entrance. In connection with the proposed works, Soil Consultants Ltd (SCL) were commissioned by Pringuer-James Consulting Engineers (PJCE) on behalf of the client to carry out a site investigation to include the following elements:

- Desk Study to identify site history and potential contaminative uses
- Identification of ground sequence, groundwater levels and geotechnical parameters
- Recommendations for spread/piled foundation design
- Contamination appraisal, risk assessment and conceptual model

This report describes the investigation undertaken, gives a summary of the ground conditions encountered and then provides recommendations for the design of foundations and retaining walls. An environmental appraisal is then provided together with a site specific risk assessment and conceptual model.

2.0 SITE DESCRIPTION

Mallinson Sports Centre is located within the existing Highgate School campus which lies on the eastern side of Bishopswood Road in Highgate, north London. The sports centre is a single level complex which includes a swimming pool, sports hall and office space. The overall dimensions of the building are approximately 62m x 42m and its centre lies at approximate NGR 527925E, 187755N. The north-eastern boundary is formed by a shallow surface drainage ditch and open games courts are present to the north-west. An open grassed area is present to the south and south-east and Bishopswood Road forms the south-western boundary.

The centre is cut into an existing slope such that higher-lying ground is present on the south-western and south-eastern sides of the building, with steps down to the lower ground on the north-eastern and north-western sides. There is a partially enclosed, courtyard area between the swimming pool and sports hall; the courtyard lies at the lower level. This is an external area which is used for storage of sports equipment and is open to the north-east.

A topographical drawing, untitled, was provided by PJCE and the levels referred to in this report have been taken from this drawing. It indicates that the higher ground at the southern corner of the centre lies at about +109.5mOD, falling gradually to about +108mOD and 108.5mOD at the north-western and south-eastern corners respectively. The ground surface then steps down to about +106.7mOD along the north-western and north-eastern sides; this includes the central courtyard area.

Existing significant vegetation includes the following:

- A number of mature deciduous trees (probably 12m to 15m high) on the south-western site boundary along Bishopswood Road
- Large mature deciduous trees along the line of a shallow drainage ditch on the eastern side of the site. These trees are probably up to 15m in height

The current site features are shown on the site plan and photographs which are included in Appendix A.

3.0 GEO-ENVIRONMENTAL DESK STUDY

3.1 Envirocheck historical map pack and reports

An historical map and environmental database search was commissioned from Groundsure to ascertain the site history/usage and surrounding land usage. An indication of the gradual development of the site over the years can be gained by a study of the historical maps (shown in Appendix B). The following table contains a summary of the site development obtained from the source maps provided in the Envirocheck historical maps.

Historical development of site and surrounding area		
Map date	**The site and immediate surrounding areas**	**Significant development / features in surrounding area (generally within 250m)**
1864-1873	The site is shown to be an open undeveloped area A tree-lined north-eastern boundary is shown, much as the present-day, with a ditch which drains the pond just to the south-east	The National School is present about 220m to the east Ponds are identified about 20m and 120m to the south-east and about 240m to the south-west The area immediately to the south of the site shows some unidentified features, possibly terracing or landscape features? A cricket ground is present about 50m to the south-west
1894-1896	The site is still undeveloped with no significant changes	Bishopswood Road has been developed immediately to the west with a school house and presumed residential properties on its western side Broadlands Road is present to the north, again with presumed associated residential properties The pond which was present 20m to the south-east is no longer shown and has presumably been infilled Some excavations/terracing appear to have taken place within the grounds of the National School to the east – presumably this was to provide level playing fields
1914-1920	The site is still undeveloped with no significant changes	Residential development has occurred up to the north-eastern boundary The cricket ground is now immediately to the south and south-east of the site On the other side of Bishopswood Road is a Schoolhouse and another cricket field

Historical development of site and surrounding area		
Map date	**The site and immediate surrounding areas**	**Significant development / features in surrounding area (generally within 250m)**
1935-1974	The site is still undeveloped with no significant changes	The area immediately to the north-west now contains 'Fives Courts' and tennis courts A miniature rifle range is identified about 150m to the east
1986-1991	The north-western part of the site contains an unidentified building, presumably the swimming pool A small cut area is present to the south of the building	No significant changes
2002-present	The south-eastern part of the site is now occupied, presumably with the sports hall	No significant changes

The relevant historical maps are included in Appendix B of this report.

The Groundsure Report includes information from a database of local activities encompassing a range of subjects related to land use, pollution, and geological/hydrological conditions. A summary of contaminative uses and other environmental issues covered by the desk study within the site and its immediate surroundings (250m unless otherwise stated) is as follows:

GROUNDSURE ENVIROINSIGHT

Historical Industrial Sites

- Potentially contaminative uses: nearest is 95m E 'unspecified ground workings'. These refer to the levelled area associated with the school to the east, used as a sports ground. Others include a Fire Engine Station 160m E and further unspecified workings 194m N
- Historical Energy Features: electricity sub-station 238m E
- Potentially infilled land: 95m E, see above. Ponds are identified 212m SW

Environmental Permits, Incidents and Registers Map

- Records of List 1 dangerous substances inventory: nearest is 223m N, no details
- Records of Part A(2) and Part B activities/enforcements: nearest is 222m E, petrol vapour recovery

Landfill and other Waste Sites Maps

- None identified within buffer

Current Land Use Map

- Current industrial data: 3no sites within 250m, the nearest being shooting facilities 87m E. Others include published goods and an electricity sub-station
- Petrol and fuel sites: nearest is 363m SE, open

Geology (see Geoinsight summary below)

Hydrogeology and Hydrology

- Aquifer within superficial deposits: none
- Aquifer within bedrock deposits: Secondary A on site
- Groundwater and surface water abstraction points: none within 2000m
- Source protection zones: none within 500m
- Groundwater vulnerability and soil leaching potential: minor aquifer and high leaching potential on site
- Detailed river network: secondary river 320m SW
- Surface water features: none identified by the Groundsure report within 250m. However, a shallow surface drainage ditch was observed on the eastern boundary of the site

Environment Agency Flood Map

- River and coastal Zones 2 and 3 flooding: none within 250m
- Risk of flooding: very low
- Groundwater flooding susceptibility areas: there is a BGS susceptibility area (Clearwater) within 50m of the site, 'limited potential'
- Groundwater flooding confidence areas: BGS confidence rating is 'low'

Designated Environmentally Sensitive Site Map

- Records of SSSIs: nearest is 721m W, Hampstead Heath Woods
- Records of ancient woodlands: nearest is 667m NE
- Records of local nature reserves: nearest is 817m E

Natural Hazards Findings and Mining (see Geoinsight summary below)

GROUNDSURE GEOINSIGHT

Geology

- Artificial ground: none within 500m
- Superficial deposits: none within 500m
- Solid geology: Claygate Member (clay, silt and sand) on site, very low to high permeability. No faults within 500m
- Radon data: the site is not in a Radon affected area and no Radon protective measures are necessary

Ground Workings Map

- Historical surface ground working features: nearest is 95m E, unspecified workings
- Historical underground working features: nearest is 654m NE, tunnels

Mining, Extraction & Natural Cavities Map

- Historical mining: nearest is 850m NW, unspecified shaft
- Other mining activities and natural cavities: none with 1000m

Natural Ground Subsidence

- Shrink/swell clays: moderate on site
- All other hazards: very low to negligible on site

Borehole Records Map

- 16no records within 250m

Estimated Background Soil Chemistry (no data)

Railways and Tunnels

- Railway projects: the site is within 5km of HS2

3.2 Walk-over survey

Our walkover survey was undertaken on 4th January 2016. The site was essentially occupied by the existing sports centre, which appeared to be well-maintained and in good order. Access to the pool plant area was not available and it was not possible to establish whether any pool water-treatment chemicals where stored on site; this will need to be established. However, this is a relatively modern building and we would expect the risk of any leakage into the ground to be low. There was no evidence of any fuel/oil tanks on the site. The surrounding area is mainly occupied by other school buildings, playing fields and residential houses.

Overall, the site was found to be in a clean and tidy state and we did not identify any particular features or land use which are likely to give rise to significant contamination risks; we thus have no particular concerns in this regard.

Representative photographs of the site are shown in Appendix A.

4.0 EXPLORATORY WORK

The ground investigation was carried out in January 2016 and comprised the following elements:

Cable percussive boreholes

Two cable percussive boreholes, designated BH Nos 1 and 2, were carried out using a demountable rig; the boreholes were taken to depths of 14.00m and 20.00m. Sampling and in-situ testing (SPT) were carried out at regular intervals and a monitoring pipe was installed in BH1 to a depth of 6m. An energy ratio, E_r, of 70.5% is applicable to the SPT hammer used.

Trial pits

Six trial pits (TP Nos 1 to 6) were excavated using hand-excavation and logged by a geotechnical engineer. The pits extended to depths of up to 2.10m.

Geotechnical laboratory testing

The following geotechnical laboratory testing was completed:

- Natural Moisture Content and index properties tests
- Unconsolidated, undrained triaxial tests
- Soluble sulphate/pH (QTS Environmental Ltd)

Contamination and chemical testing

Selected soil and groundwater samples were delivered to a specialist laboratory (QTS Environmental Ltd) and the following testing was carried out:

- General soil suite - 5no samples
- Waste Acceptance Criterion (WAC) - 1no sample
- Soluble sulphate/pH

The engineering logs of the exploratory holes and the geotechnical laboratory testing results are included in Appendix A. The ground levels at the exploratory locations have ben interpolated from the untitled topographical survey drawing provide by PJCE.

5.0 GROUND CONDITIONS

Reference to published BGS data indicates that the site is underlain by the Claygate Member resting upon the London Clay Formation. The investigation confirmed this sequence, with a variable thickness of made ground overlying the natural soils.

5.1 Made ground

Either topsoil (200mm to 300mm thick) or concrete hard surfacing (300mm thick) was generally present at the borehole and trial pit positions. The underlying made ground was relatively variable comprising brown/grey or brown/orange silty gravelly clay with subsidiary brick and concrete fragments. The clay was assessed as being of a generally soft or soft to firm consistency. Occasional live roots were observed within the made ground. The made ground extended to depths of between 0.25m and 0.90m where proven.

5.2 Claygate Member

This formation generally comprised soft, locally firm, brown/orange and pale grey mottled silty slightly sandy clay with sand/silt partings. The presence of localised flint gravel suggests that some natural re-working has occurred. Hand vane readings of between 42kPa and 50kPa were measured in the trial pits and SPT N_{60} values of between 5 and 14 were recorded; these measurements indicate a low to medium strength classification.

Index property tests indicate a low to medium plasticity clay/silt (BS scheme) and either a non-plastic or a low to medium volume change potential (NHBC scheme).

5.3 London Clay

This formation was only encountered in the cable percussive boreholes and was met at depths of between 4.00m and 2.30m; this is equivalent to between approximately +104.5mOD and +105mOD. The formation comprised dark grey/grey silty clay with occasional to frequent silt/sand partings and scattered shell fragments.

In-situ SPT and laboratory triaxial tests indicate the clay to be locally low strength in its upper levels (BH1), becoming medium to high strength with depth. Index property testing indicated an intermediate to high plasticity classification using the BS scheme and a medium to high volume change potential with the NHBC scheme.

5.4 Groundwater

Groundwater inflows occurred at depths of between 2.90m and 3.60m in BH Nos 1 and 2 respectively; short term 20-minute rest levels at 2.40m and 3.10m depth were recorded. In the trial pits located in the low-lying 'courtyard' area, localised shallow groundwater was observed with standing levels in the pits at depths of between 0.90m to 1.20m. Some of the trial pits remained dry and this suggests that the shallow occurrences may be localised perched water pockets.

A deeper inflow was observed in the London Clay at a depth of 13.00m in BH No 1.

5.5 Environmental observations

No visual or olfactory evidence of contamination was observed.

5.6 Trial pits/foundations

A summary of the findings of the trial pit is as follows:

Ref	Location	Observations
TP1	Corner of swimming pool and changing rooms	Swimming pool: probable concrete ground beam Changing rooms: possible strip foundation at about 1.10m depth
TP2	Changing rooms	Unable to penetrate concrete slab at 0.30m depth (numerous drains in the vicinity)
TP3	Sports hall	Possible foundation at about 1.10m depth Groundwater standing at 0.90m; base of pit obscured
TP4	Sports hall	Possible foundation at about 1.40m depth Groundwater standing at 1.20m; base of pit obscured
TP5	Swimming pool	Possible ground beam
TP6	High-lying Bishopswood Road elevation	Trial pit excavated down behind sheet pile retaining wall. Base >2.10m depth

6.0 GEOTECHNICAL ASSESSMENT

The proposed development scheme involves the following elements:

- A new 2-storey studio block between the swimming pool and the sports hall. This is located in the low-lying part of the site. Maximum column loads of 395kN (DL + LL) are envisage for this structure
- A 2-storey access extension on the southern part of the south-western elevation

The investigation has indicated that beneath a relatively small thickness of made ground, the natural Claygate Member is present overlying the London Clay. Lightly loaded spread foundations resting within the Claygate Member could be adopted although where the underlying London Clay is within a practical depth, more highly loaded spread foundations on this more competent stratum may be a preferable alternative. Localised high groundwater is present and some control measures will be required; it should be noted that water level can vary seasonally and continued monitoring of the observation pipe should be carried out. Piled foundations will present an alternative solution.

6.1 Spread foundations

New studio block

This new block is to be located between the swimming pool and the sports hall structure. In this area, the made ground extended to depths of between 0.25m and 0.90m (BH No 2 and TP Nos 1 to 5). The underlying natural soils initially comprise soft, locally firm clays of the Claygate Member. Spread foundations should be placed within the natural clay soils at a minimum depth of 0.90m. Moderate-sized strip or pad foundations (say up to 2.5m width) should be designed at an allowable bearing pressure of 55kPa. This limited bearing pressure takes account of the variable and locally low-strength nature of the natural clay. Higher loadings could be applied to deeper foundations placed within the London Clay. Based upon BH No 2, an excavation depth of about 2.30m will be required to expose this more competent stratum. Moderate sized strip or pad foundations (again up to say 2.5m width) may be designed at an allowable bearing pressure of 150kPa. Careful inspection of the excavations should be carried out to ensure that an appropriate formation is exposed. These recommended pressures should ensure that a Factor of Safety of at least three is in operation against bearing capacity failure and that settlements remain within tolerable limits.

As previously discussed, localised high groundwater was observed during the investigation in this area. Shallow foundations placed within the upper natural soils may remain dry but there will be a significant risk of inflows; we therefore recommend that the presence of groundwater is anticipated for all excavations. Certainly with any deeper excavations to the London Clay, provision should be made for groundwater control measures; this may require cut-off trench sheeting to seal any inflows and internal pumping. We recommend that advance excavations are carried out by the groundworks contractor to assess the excavation stability/practicality and the most appropriate water control technique. The upper clays will be highly susceptible to water softening/disturbance and the utmost care should be exercised when constructing foundations in this stratum; we recommend that a suitable contingency is put in place against the requirement to deepen the foundations to bear within the more competent London Clay.

It is noted that there is a row of mature deciduous trees to the north-east of this development area. Whilst this is not a residential development, we recommend that the foundations are designed in full accordance with the NHBC Standards (Chapter 4.2, 'Building near trees'). This document can be regarded as an industry standard for mitigating the risk of shrink/swell effects in clays due to tree root action. We recommend that the species of trees are confirmed by an arboriculturalist and that safe depths are determined using a medium volume change potential for the Claygate Member soils, with a high volume change potential for the London Clay. The trees are probably in excess of 15m from the proposed building line at its closest and the requirements of the standards should not therefore be overly onerous. Notwithstanding this, the excavations should be carefully inspected and local deepening carried ut if root-infested or desiccated clays are observed.

Access extension

In this area (BH No 1) the Claygate Member extended to a depth of 4.00m. The upper natural clay appears to be slightly more competent in this higher-lying area and we consider that a higher allowable bearing pressure of say 70kPa could be adopted for spread foundations. As above, a minimum depth of 0.90m is recommended for moderate sized strip or pad foundations. Deeper spread foundations bearing in the London Clay are unlikely to be practical in this location as excavation depths of up to about 6m below existing ground level would be required to expose appreciably more competent soils.

On the basis of BH No 1, shallow foundation excavations are expected to remain dry. However, as above, the presence of groundwater should be anticipated for all groundworks operations and appropriate precautions/contingencies put in place. Advance trial excavations by the groundworks contractor would again be useful in determining the extent and type of any water control measures.

A number of mature deciduous trees are present within about 5m of the proposed extension. As above, we recommend that any foundations are designed in full accordance with the NHBC Standards, assuming medium volume change potential soil. If any of the nearby trees are high water demand species, this will probably result in safe founding depths >2.5m, in which case piles should be adopted. This demonstrates the requirement for a comprehensive tree survey to identify species/heights and to allow an accurate assessment of desiccation risks.

6.2 Piled foundations

Piled foundations would transfer the structural loads to the more competent London Clay at depth. For the ground and groundwater conditions encountered, we consider that Continuous-flight Auger-injected piles (CFA) are likely to be the most appropriate. The following table of coefficients may be used for the preliminary design of CFA piles and, based upon the measured strength profile.

Shaft adhesion

Stratum	Depth/level	Undrained cohesion (from strength profile)	Ultimate unit shaft adhesion 'q_s'
Made ground	Up to 1.10m thick	N/A	Ignore
Claygate Member and upper London Clay (note e)	Above +103mOD	30kPa	15kPa
London Clay	Below +103mOD to +89mOD	Increases linearly from 120kN/m^2 at a rate of 5.7kPa/m	Increases linearly from 60kPa at a rate of 2.85kPa/m (incorporates α = 0.50)

Notes:

a) Unit shaft adhesion 'q_s' = α x c_u (where α = 0.50 and c_u is the undrained cohesion from the design line)

b) The α value of 0.5 is based upon 102mm diameter triaxial tests and this should not be varied

c) The average shaft adhesion over the pile length should be limited to 110kN/m^2

d) The maximum value for unit shaft adhesion should be limited to 140kN/m^2

e) The contribution of all potentially desiccated soils within the zone of tree influence should be ignored

End bearing

Stratum	Depth/level	Undrained cohesion (from strength profile)	Ultimate unit base resistance 'q_b'
London Clay	Below +95mOD to +89mOD	Increases linearly from 166kPa at a rate of 5.7kPa/m	Increases linearly from 1,494kPa at a rate of 51.3kPa/m (incorporates Nc = 9)

Notes:

a) Unit base resistance in clay 'q_b' = Nc x c_u (where Nc = 9 and c_u is the equivalent undrained cohesion from the design line)

An overall Factor of Safety of 2.6 should be appropriate when applied to these ultimate parameters, in accordance with LDSA guidelines. As a preliminary guide to the use of the coefficients, we have calculated the capacities of single piles with a range of diameters terminating at various depths:

Pile diameter (mm)	Pile toe level (mOD)	Pile toe depth – note c (mbgl)	Working load (kN)
300	+93	16	330
	+91	18	400
	+89	20	470
450	+93	16	525
	+91	18	630
	+89	20	745
600	+93	16	745
	+91	18	890
	+89	20	1040

Notes:

a) Working load is calculated using F_{shaft} and F_{base} = 2.6

b) Concrete stress should self-evidently be considered in the final design

c) Relative to ground level at +109mOD

d) Ignores the contribution of all soils to 3m depth

The above examples are not recommendations for pile diameter/length but are intended to illustrate the use of the shaft and base parameters.

Eurocode 7 adopts a different approach, applying partial factors to the ultimate pile capacity. The pile resistance is calculated using the above parameters in accordance with EC7 (BS EN 1997-1:2004 and UK National Annex) for the ultimate limit state GEO Design Approach 1, Combinations 1 and 2. The following partial factors, as recommended in the UK National Annex, are applied:

a] Model Factor, γ_{Rd} = 1.4 (Combinations 1 and 2)

b] Factor on shaft resistance, γ_s = 1.6 (Combination 2)

c] Factor on base resistance, γ_b = 2.0 (Combination 2)

The design engineer must ensure that the correct comparisons are made between the Design Actions and Design Resistances and that SLS checks are made.

We recommend that a specialist piling contractor is consulted to provide the final pile design, taking into account the above recommendations.

6.3 Ground floor slabs

Studio Block

For lightly loaded slabs, say up to 15kPa, it is considered that a ground bearing floor slab could be adopted. Proof-rolling must be carried out and any soft/loose spots so identified should be removed and replaced with compacted granular fill. The formation should be carefully inspected, and if any root-infested or desiccated clays are present these should be removed and replaced. The zone of tree influence should be determined using the NHBC guidelines, and if the theoretical wedge of potentially desiccated soils extends

beneath the slab these should be removed and replaced with compacted granular fill. The practicality of this approach would need to be assessed taking into account the localised high groundwater levels.

The alternative of a suspended slab should be considered for slab loadings greater than say 15kPa or within the zone of tree influence. In the latter case, a suitable void should be incorporated to accommodate any swelling clays.

Access extension

Whilst no evidence of desiccation was observed in BH No 1, this structure almost certainly lies within the theoretical zone of influence of the mature deciduous trees on the south-western boundary. We recommend that a suspended floor slab is adopted for this structure, incorporating a suitable void beneath to accommodate potential swelling in compliance with NHBC guidelines.

6.4 Foundation concrete

Low to moderate concentrations of soluble sulphates were measured with slightly alkaline pH values. The results fall into Site Design Classes DS-1 to DS-2 of Table C2 given in BRE Special Digest 1 (2005). We assess the site as having 'mobile' ground water and recommend that buried concrete is designed in accordance with ACEC Site Class AC-2.

7.0 ENVIRONMENTAL ASSESSMENT

This appraisal adopts the current UK practice which uses the Source-Pathway-Receptor methodology to assess contamination risks. For a site to be designated as contaminated a plausible linkage between any identified sources and receptors must be identified, ie whether significant pollution linkages (SPLs) are present. In considering the potential for contamination to cause a significant effect, the extent and nature of the potential source are assessed and pathways/receptors identified; without an SPL there is theoretically no risk to the receptors from contamination. The assessed risks to the various potential receptors are summarised in the tabulated Conceptual Site Model which forms Section 7.6 of this report.

7.1 Environmental setting and context

The Groundsure report indicates a Bedrock Aquifer Designation of 'Secondary A'. No groundwater abstraction points or source protection zones are identified within 2000m. The site is assessed as being of **low** Environmental Sensitivity.

7.2 Potential contamination sources (on-site and off-site)

The desk study has not identified any significant potential contamination sources within the site or its immediate surroundings. Some ground workings were identified to the east of the site but these appear to be associated with a levelling exercise to provide a sports area. A small pond which was present within 20m of the site was infilled by the end of the 19th century. We assess there to be a **low** risk of potential contaminative sources which could affect the site.

7.3 Contamination testing

In order to identify whether known or unknown sources within (and outside) the site have caused contamination, we have carried out testing on a series of soil and groundwater samples. The desk study has indicated that the main risk to the site and potential receptors is likely to be only the very limited thickness of made ground present. Testing for a general range of contaminants was therefore initially undertaken.

The results were assessed where relevant against the DEFRA Soil Guideline Values (SGV) and the LQM/CIEH Generic Assessment Criteria (GAC) for Human Health Risk Assessment in which LQM/CIEH have derived additional SGVs from the current CLEA Model (2nd Edition, 2009). There are currently no published SGV's or GAC's for Extractable/Total Petroleum Hydrocarbons and the results were compared with the frequently used EA remedial target of 1,000mg/kg. The SGV for lead contamination has been withdrawn but Category 4 Screening Levels (C4SLs) recently introduced by DEFRA can be useful values for comparison with recorded results. C4SLs have also been useful for comparison with several other contaminants.

The contamination testing was carried out specifically for the purpose of providing a general guidance evaluation for the proposed development. Reference should be made to the foreword to the appended contamination test results in order to fully understand the context in which this discussion should be viewed.

There are no specific published guidelines for school use and we therefore assessed the results against the criteria for residential development, generally the most stringent. Using the relevant the trigger levels, all of the results fell below the threshold values.

The results of the testing suggest that there is no widespread contamination present at the borehole positions. It should be noted of course that there may of course be pockets of undetected contamination between exploratory points. Although not detected in our samples, asbestos containing materials [ACMs] are common in made ground and in buildings constructed before 2000, and this aspect should be addressed in the construction/health and safety procedures.

7.4 Disposal of excavated soils

A rigorous hazard assessment of the results was not within the scope of our investigation, but our preliminary conclusion from the contamination testing and WAC testing is that the made ground will probably classify as either 'inert' or 'non-hazardous industrial' waste with an 'inert' classification for natural soils. Early consultations must be made with appropriate waste facilities or regulators to confirm the requirements for off-site disposal.

7.5 Ground gas

No significant ground gas risk was identified and no degradable soils were observed during the investigation. We consider that the risk of harmful ground gases affecting the new buildings as being low and no protective measures are likely to be required in this regard.

7.6 Risk Assessment and Conceptual Model

Taking into account the above discussion, the assessed risks to potential receptors are summarised as follows:

Source/ hazard	Pathway	Receptor	Mitigation measures/explanation	Assessed Risk level
Contaminated soil: on-site and off-site sources	Ingestion/ contact	End user and construction workers	▪ No potential contaminative uses identified on site or its immediate surroundings ▪ No contamination was indicated by soil testing ▪ 100% hard cover will be provided by the new buildings and no SPLs are expected with respect to the end-users/ occupiers ▪ Appropriate PPE should be worn by construction workers	**LOW**

Source/ hazard	Pathway	Receptor	Mitigation measures/explanation	Assessed Risk level
Contaminated soil: on-site sources	Migration of contaminated ground water and/or surface run-off through contaminated fill into aquifer	Aquifer and surface water	▪ No potential contaminative uses identified on site or its immediate surroundings ▪ No contamination was indicated by soil testing ▪ 100% hard cover will be provided by the new buildings preventing downward migration of surface run-off ▪ No surface/groundwater abstraction points within 2000m ▪ No source protection zones were identified within 500m	**LOW**
Ground gas: on-site and off-site sources	Migration	End-user and buildings	▪ There are significant thicknesses of made ground on site ▪ No degradable soils were observed during the investigation ▪ Characteristic Situation 1 (CIRIA C665) is considered to be appropriate – very low risk ▪ No Radon protective measures required	**LOW**

In conclusion, based upon the information reviewed and the results of the investigation, our assessment is that the residual risks to potential receptors should be **LOW** provided appropriate remedial measures are adopted. It is self-evident that there may be zones of contamination within the site which were not encountered in our boreholes. A careful watching brief should be kept during construction and if obvious or suspected contamination is encountered this should be dealt with prescriptively; a suitable contingency should be in place in this regard.

GENERAL INFORMATION, LIMITATIONS AND EXCEPTIONS

Unless otherwise stated, our Report should be construed as being a Ground Investigation Report (GIR) as defined in BS EN1997-2. Our Report is not intended to be and should not be viewed or treated as a Geotechnical Design Report (GDR) as defined in EN1997-2. Any 'design' recommendations which are provided are for guidance only and are intended to allow the designer to assess the results and implications of our investigation/testing and to permit preliminary design of relevant elements of the proposed scheme.

The methods of investigation used have been chosen taking into account the constraints of the site including but not limited to access and space limitations. Where it has not been possible to reasonably use an EC7 compliant investigation technique we have adopted a practical technique to obtain indicative soil parameters and any interpretation is based upon our engineering experience and relevant published information.

The Report is issued on the condition that Soil Consultants Ltd will under no circumstances be liable for any loss arising directly or indirectly from ground conditions between the exploratory points which differ from those identified during our investigation. In addition Soil Consultants Ltd will not be liable for any loss arising directly or indirectly from any opinion given on the possible configuration of strata both between the exploratory points and/or below the maximum depth of the investigation; such opinions, where given, are for guidance only and no liability can be accepted as to their accuracy. The results of any measurements taken may vary spatially or with time and further confirmatory measurements should be made after any significant delay in using this Report.

Comments made relating to ground-water or ground-gas are based upon observations made during our investigation unless otherwise stated. Ground-water and ground-gas conditions may vary with time from those reported due to factors such as seasonal effects, atmospheric effects and and/or tidal conditions. We recommend that if monitoring installations have been included as part of our investigation, continued monitoring should be carried out to maximise the information gained.

Specific geotechnical features/hazards such as (but not limited to) areas of root-related desiccation and dissolution features in chalk/soluble rock can exist in discrete localised areas - there can be no certainty that any or all of such features/hazards have been located, sampled or identified. Where a risk is identified the designer should provide appropriate contingencies to mitigate the risk through additional exploratory work and/or an engineered solution.

Where a specific risk of ground dissolution features has been identified in our Report (anything above a 'low' risk rating), reference should be made to the local building control to establish whether there are any specific local requirements for foundation design and appropriate allowances should be incorporated into the design. If such a risk assessment was not within the scope of our investigation and where it is deemed that the ground sequence may give rise to such a risk (for example near-surface chalk strata) it is recommended that an appropriate assessment should be undertaken prior to design of foundations.

Where spread foundations are used, we recommend that all excavations are inspected and approved by suitably experienced personnel; appropriate inspection records should be kept. This should also apply to any structures which are in direct contact with the soil where the soil could have a detrimental effect on performance or integrity of the structure.

Ground contamination often exists in small discrete areas - there can be no certainty that any or all such areas have been located, sampled or identified.

The findings and opinions conveyed in this Report may be based on information from a variety of sources such as previous desk studies, investigations or chemical analyses. Soil Consultants Limited cannot and does not provide any guarantee as to the authenticity, accuracy or reliability of such information from third parties; such information has not been independently verified unless stated in our Report.

Our Report is written in the context of an agreed scope of work between Soil Consultants Ltd and the Client and should not be used in any different context. In light of additional information becoming available, improved practices and changes in legislation, amendment or re-interpretation of the assessment or the Report in part or in whole may be necessary after its original publication.

Unless otherwise stated our investigation does not include an arboricultural survey, asbestos survey, ecological survey or flood risk assessment and these should be deemed to be outside the scope of our investigation.

APPENDIX A

Fieldwork, in-situ testing and monitoring

- Cable percussive borehole records
- Standard Penetration Test results
- SPT hammer energy rating certificate
- Trial pit records

Laboratory testing

- Index property testing
- Plasticity charts
- Triaxial test results

Contamination and chemical testing

QTS Environmental Ltd Reports:

- 16-39880 (25/01/16)
- 16-39814 (28/01/16)

Ground profiles

- Plot of SPT 'N' and undrained cohesion versus level

Plans & drawings

- Photographs
- Site Plan
- Location Plan

FOREWORD FOR CABLE PERCUSSIVE DRILLING - GUIDANCE NOTES

GENERAL
The Borehole Records are compiled from the driller's description of the strata encountered, an examination of the samples by our Geotechnical Engineer and the results of in-situ and laboratory tests. Based on this data, the report presents an opinion on the configuration of strata within the site. However, such reasonable assumptions are given for guidance only and no liability can be accepted for changes in conditions not revealed by the boreholes.

BORING METHODS
The Cable Percussion technique of boring is normally employed and allows the ground conditions to be reasonably well established. However, some disturbance of the ground is inevitable, particularly some "softening" of the upper zone of clay immediately beneath a granular soil. The presence of thin layers of different soils within a stratum may not always be detected.

GROUND WATER
The depth at which ground water was struck is entered on the Borehole Records. However, this observation may not indicate the true water level at that period. Due to the speed of boring and the relatively small diameter of the borehole, natural ground water may be present at a depth slightly higher than the water strike. Moreover, ground water levels are subject to variations caused by changes in the local drainage conditions and by seasonal effects. When a moderate inflow of water does take place, boring is suspended for at least 10 minutes to enable a more accurate short-term water level to be achieved. An estimate of the rate of inflow is also given. This is a relative term and serves only as a guide to the probable flow of water into an excavation.

Further observations of the water level made during the progress of the borehole are shown including end of shift and overnight readings and the depth at which water was sealed off by the borehole casing, if applicable.

Whilst drilling through granular soils, it is usually necessary to introduce water into the borehole to permit their extraction. When additional water has been used a remark is made on the Borehole Record and the implications are discussed in the text.

SAMPLES
Undisturbed samples of the predominantly cohesive soils are obtained using a 100mm diameter open-drive sampler. In granular soils, disturbed bulk samples are taken and placed in polythene bags. Small jar samples are taken at frequent intervals in all soils for subsequent visual examination. Where ground water is encountered in sufficient quantity, a sample of the ground water is also taken.

IN-SITU STANDARD PENETRATION TESTS
This test is performed in accordance with the procedure given in B.S.1377:1990. The individual blow count record for each test is given on a separate table. The 'N' value is normally the number of blows to achieve a penetration of 0.3m following a seating distance of 0.15m and is quoted at the mid-depth of the test zone. However if a change of stratum occurs within the test zone then a revised 'N' value is calculated to assess one layer in particular. In hard strata full penetration may not be obtained. In such cases the suffix + indicates that the result has been extrapolated from the limited penetration achieved. Where ground water has affected the measured values, the resultant 'N' values have been placed in brackets since it is unlikely to represent the true in-situ density of the soil.

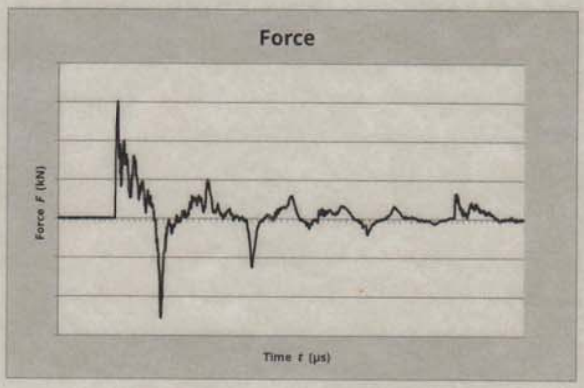
Hammer Energy Measurement Report

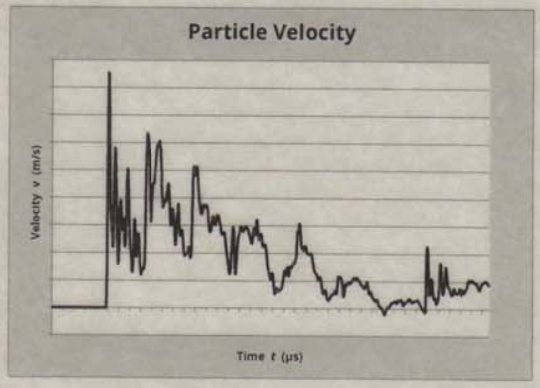
Type of Hammer	SPT HAMMER
Client	GEH GROUNDWORKS
Test No	EQU1366_1
Test Depth (m)	7.50
Date of Test	16 October 2015
Valid until	15 October 2016
Hammer ID	GEH3

Mass of the hammer	m =	63.5kg
Falling height	h =	0.76m
E_{theor} =	$m \times g \times h$ =	473J

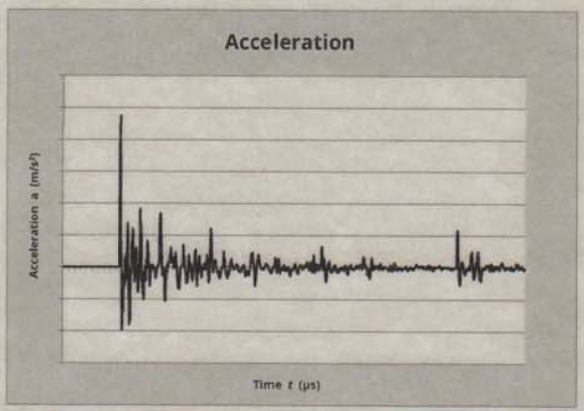
Characteristics of the instrumented rod

Diameter	d_r =	0.052 m
Length of the instrumented rod		0.558 m
Area	A =	11.61 cm^2
Modulus	E_a =	206843 MPa

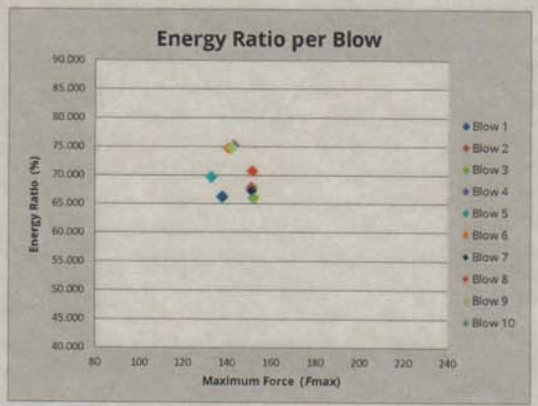




Key



1 Anvil
2 Part of instrumented rod
3 Drive Rod
4 Strain Gauge
5 Accelerometer
6 Ground



F Force
d_r Diameter of rod

Fig. B.1 and B.2 BS EN ISO 22476-3 : 2005 + A1 : 2011

Observations:
1.

E_{meas} =	**0.333**	kN-m
E_{theor} =	**0.473**	kN-m

Energy Ratio $(E_r) = \frac{E_{meas}}{E_{theor}}$ = **70.48%**

BH2	13.50	23	2.14	1.74	270	298	10.00	B	149	

Testing in accordance with BS EN ISO 17892 UU = unconsolidated, undrained; MUU = multistage, unconsolidated, ur Date: 20 January 16

Unless stated otherwise: Rate of strain = 2mm/min, Standard latex membrame used with thickness = 0.5mm

Failure modes: B = brittle, I = intermediate, P = plastic

SoilConsultants

FOREWORD TO CONTAMINATION TESTING AND ASSESSMENT

The following statements are designed to inform and guide the Client and other potential parties intending to rely upon this report, with the express intent of protecting them from misunderstanding as to the extent and thus the potential associated risks that may result from proceeding without further evaluations or guidance.

1) Unless otherwise stated in this report, the testing of soils and waters is based on a range of commonly occurring potential contaminants for the specific purpose of providing a general guidance evaluation for the proposed form of development. Thus, the range of potential contaminants is neither exhaustive nor specifically targeted to any previous known uses or influences upon the site.

2) The amount and scope of the testing should not be assumed to be exhaustive but has been selected, at this stage, to provide a reasonable, general view of the site ground conditions. In many cases this situation is quite sufficient for the site to be characterised for the purposes of development and related Health and Safety matters for persons involved in or directly affected by the site development works. It must be understood, however, that in certain circumstances aspects or areas of the site may require further investigation and testing in order to fully clarify and characterise contamination issues, both for regulatory compliance and for commercial reasons.

3) The scope of the contamination testing must not automatically be regarded as being sufficient to fully formulate a remediation scheme. For such a scheme it may be necessary to consider further testing to verify the effectiveness of the remedial work after the site has been treated. It must be understood that a remediation scheme which brings a site into a sufficient state for the proposed development ("fit for purpose") under current legislation and published guidance, may result in some contamination being left in-situ. It is possible that forthcoming legislation may result in a site being classified by the Local Authority and assigned a "Degree of Risk" related to previous use or known contamination.

4) The scope of the environmental investigation and contamination testing must not be automatically regarded as sufficient to satisfy the requirements in the wider environmental setting. The risks to adjacent properties and to the water environment are assessed by the regulatory authorities and there may be a requirement to carry out further exploration, testing and, possibly monitoring in the short or long term. It is not possible to sensibly predict the nature and extent of such additional requirements as these are the direct result of submissions to and liaison with the regulatory authorities. It is imperative, therefore, that such submissions and contacts are made as soon as possible, especially if there are perceived to be critical features of the site and proposed scheme, in this context.

5) New testing criteria have been implemented by the Environment Agency to enable a waste disposal classification to be made. The date of implementation of this Waste Acceptance Criteria (WAC) was July 2005. It is this testing that will be used by the waste regulatory authorities, including waste disposal sites, to designate soils for disposal in landfill sites. In certain circumstances, to satisfy the waste regulations, there may be the necessity to carry out additional testing to clarify and confirm the nature of any contamination that may be present. If commercial requirements are significant then this process may also necessitate further field operations to clarify the extent of certain features. Thus, the waste classification must be obtained from the waste regulation authorities or a licensed waste disposal site and we strongly recommend that this classification is obtained as soon as possible and certainly prior to establishing any costings or procedures for this or related aspects of the scheme.

Soil Analysis Certificate - Methodology & Miscellaneous Information

QTS Environmental Report No: 16-39880

Soil Consultants Ltd

Site Reference: Highgate MSC School, Highgate, London N6 4PH

Project / Job Ref: 9916/JRCB

Order No: 9916/JRCB

Reporting Date: 29/01/2016

Matrix	Analysed On	Determinand	Brief Method Description	Method No
Soil	D	Boron - Water Soluble	Determination of water soluble boron in soil by 2:1 hot water extract followed by ICP-OES	E012
Soil	AR	BTEX	Determination of BTEX by headspace GC-MS	E001
Soil	D	Cations	Determination of cations in soil by aqua-regia digestion followed by ICP-OES	E002
Soil	D	Chloride - Water Soluble (2:1)	Determination of chloride by extraction with water & analysed by ion chromatography	E009
Soil	AR	Chromium - Hexavalent	Determination of hexavalent chromium in soil by extraction in water then by acidification, addition of 1,5 diphenylcarbazide followed by colorimetry	E016
Soil	AR	Cyanide - Complex	Determination of complex cyanide by distillation followed by colorimetry	E015
Soil	AR	Cyanide - Free	Determination of free cyanide by distillation followed by colorimetry	E015
Soil	AR	Cyanide - Total	Determination of total cyanide by distillation followed by colorimetry	E015
Soil	D	Cyclohexane Extractable Matter (CEM)	Gravimetrically determined through extraction with cyclohexane	E011
Soil	AR	Diesel Range Organics (C10 - C24)	Determination of hexane/acetone extractable hydrocarbons by GC-FID	E004
Soil	AR	Electrical Conductivity	Determination of electrical conductivity by addition of saturated calcium sulphate followed by electrometric measurement	E022
Soil	AR	Electrical Conductivity	Determination of electrical conductivity by addition of water followed by electrometric measurement	E023
Soil	D	Elemental Sulphur	Determination of elemental sulphur by solvent extraction followed by GC-MS	E020
Soil	AR	EPH (C10 – C40)	Determination of acetone/hexane extractable hydrocarbons by GC-FID	E004
Soil	AR	EPH Product ID	Determination of acetone/hexane extractable hydrocarbons by GC-FID	E004
Soil	AR	EPH TEXAS (C6-C8, C8-C10, C10-C12, C12-C16, C16-C21, C21-C40)	Determination of acetone/hexane extractable hydrocarbons by GC-FID for C8 to C40. C6 to C8 by headspace GC-MS	E004
Soil	D	Fluoride - Water Soluble	Determination of Fluoride by extraction with water & analysed by ion chromatography	E009
Soil	D	FOC (Fraction Organic Carbon)	Determination of fraction of organic carbon by oxidising with potassium dichromate followed by titration with iron (II) sulphate	E010
Soil	D	Loss on Ignition @ 450oC	Determination of loss on ignition in soil by gravimetrically with the sample being ignited in a muffle furnace	E019
Soil	D	Magnesium - Water Soluble	Determination of water soluble magnesium by extraction with water followed by ICP-OES	E025
Soil	D	Metals	Determination of metals by aqua-regia digestion followed by ICP-OES	E002
Soil	AR	Mineral Oil (C10 - C40)	Determination of hexane/acetone extractable hydrocarbons by GC-FID fractionating with SPE cartridge	E004
Soil	AR	Moisture Content	Moisture content; determined gravimetrically	E003
Soil	D	Nitrate - Water Soluble (2:1)	Determination of nitrate by extraction with water & analysed by ion chromatography	E009
Soil	D	Organic Matter	Determination of organic matter by oxidising with potassium dichromate followed by titration with iron (II) sulphate	E010
Soil	AR	PAH - Speciated (EPA 16)	Determination of PAH compounds by extraction in acetone and hexane followed by GC-MS with the use of surrogate and internal standards	E005
Soil	AR	PCB - 7 Congeners	Determination of PCB by extraction with acetone and hexane followed by GC-MS	E008
Soil	D	Petroleum Ether Extract (PEE)	Gravimetrically determined through extraction with petroleum ether	E011
Soil	AR	pH	Determination of pH by addition of water followed by electrometric measurement	E007
Soil	AR	Phenols - Total (monohydric)	Determination of phenols by distillation followed by colorimetry	E021
Soil	D	Phosphate - Water Soluble (2:1)	Determination of phosphate by extraction with water & analysed by ion chromatography	E009
Soil	D	Sulphate (as SO4) - Total	Determination of total sulphate by extraction with 10% HCl followed by ICP-OES	E013
Soil	D	Sulphate (as SO4) - Water Soluble (2:1)	Determination of sulphate by extraction with water & analysed by ion chromatography	E009
Soil	D	Sulphate (as SO4) - Water Soluble (2:1)	Determination of water soluble sulphate by extraction with water followed by ICP-OES	E014
Soil	AR	Sulphide	Determination of sulphide by distillation followed by colorimetry	E018
Soil	D	Sulphur - Total	Determination of total sulphur by extraction with aqua-regia followed by ICP-OES	E024
Soil	AR	SVOC	Determination of semi-volatile organic compounds by extraction in acetone and hexane followed by GC-MS	E006
Soil	AR	Thiocyanate (as SCN)	Determination of thiocyanate by extraction in caustic soda followed by acidification followed by addition of ferric nitrate followed by colorimetry	E017
Soil	D	Toluene Extractable Matter (TEM)	Gravimetrically determined through extraction with toluene	E011
Soil	D	Total Organic Carbon (TOC)	Determination of organic matter by oxidising with potassium dichromate followed by titration with iron (II) sulphate	E010
Soil	AR	TPH CWG (ali: C5- C6, C6-C8, C8-C10, C10-C12, C12-C16, C16-C21, C21-C34, aro: C5-C7, C7-C8, C8-C10, C10-C12, C12-C16, C16-C21, C21-C35)	Determination of hexane/acetone extractable hydrocarbons by GC-FID fractionating with SPE cartridge for C8 to C35. C5 to C8 by headspace GC-MS	E004
Soil	AR	TPH LQM (ali: C5-C6, C6-C8, C8-C10, C10 C12, C12-C16, C16-C35, C35-C44, aro: C5-C7, C7-C8, C8-C10, C10-C12, C12-C16, C16-C21, C21-C35, C35-C44)	Determination of hexane/acetone extractable hydrocarbons by GC-FID fractionating with SPE cartridge for C8 to C44. C5 to C8 by headspace GC-MS	E004
Soil	AR	VOCs	Determination of volatile organic compounds by headspace GC-MS	E001
Soil	AR	VPH (C6-C8 & C8-C10)	Determination of hydrocarbons C6-C8 by headspace GC-MS & C8-C10 by GC-FID	E001

Reporting Date: 28/01/2016

Matrix	Analysed On	Determinand	Brief Method Description	Method No
Soil	D	Boron - Water Soluble	Determination of water soluble boron in soil by 2:1 hot water extract followed by ICP-OES	E012
Soil	AR	BTEX	Determination of BTEX by headspace GC-MS	E001
Soil	D	Cations	Determination of cations in soil by aqua-regia digestion followed by ICP-OES	E002
Soil	D	Chloride - Water Soluble (2:1)	Determination of chloride by extraction with water & analysed by ion chromatography	E009
Soil	AR	Chromium - Hexavalent	Determination of hexavalent chromium in soil by extraction in water then by acidification, addition of 1,5 diphenylcarbazide followed by colorimetry	E016
Soil	AR	Cyanide - Complex	Determination of complex cyanide by distillation followed by colorimetry	E015
Soil	AR	Cyanide - Free	Determination of free cyanide by distillation followed by colorimetry	E015
Soil	AR	Cyanide - Total	Determination of total cyanide by distillation followed by colorimetry	E015
Soil	D	Cyclohexane Extractable Matter (CEM)	Gravimetrically determined through extraction with cyclohexane	E011
Soil	AR	Diesel Range Organics (C10 - C24)	Determination of hexane/acetone extractable hydrocarbons by GC-FID	E004
Soil	AR	Electrical Conductivity	Determination of electrical conductivity by addition of saturated calcium sulphate followed by electrometric measurement	E022
Soil	AR	Electrical Conductivity	Determination of electrical conductivity by addition of water followed by electrometric measurement	E023
Soil	D	Elemental Sulphur	Determination of elemental sulphur by solvent extraction followed by GC-MS	E020
Soil	AR	EPH (C10 – C40)	Determination of acetone/hexane extractable hydrocarbons by GC-FID	E004
Soil	AR	EPH Product ID	Determination of acetone/hexane extractable hydrocarbons by GC-FID	E004
Soil	AR	EPH TEXAS (C6-C8, C8-C10, C10-C12, C12-C16, C16-C21, C21-C40)	Determination of acetone/hexane extractable hydrocarbons by GC-FID for C8 to C40. C6 to C8 by headspace GC-MS	E004
Soil	D	Fluoride - Water Soluble	Determination of Fluoride by extraction with water & analysed by ion chromatography	E009
Soil	D	FOC (Fraction Organic Carbon)	Determination of fraction of organic carbon by oxidising with potassium dichromate followed by titration with iron (II) sulphate	E010
Soil	D	Loss on Ignition @ 450oC	Determination of loss on ignition in soil by gravimetrically with the sample being ignited in a muffle furnace	E019
Soil	D	Magnesium - Water Soluble	Determination of water soluble magnesium by extraction with water followed by ICP-OES	E025
Soil	D	Metals	Determination of metals by aqua-regia digestion followed by ICP-OES	E002
Soil	AR	Mineral Oil (C10 - C40)	Determination of hexane/acetone extractable hydrocarbons by GC-FID fractionating with SPE cartridge	E004
Soil	AR	Moisture Content	Moisture content; determined gravimetrically	E003
Soil	D	Nitrate - Water Soluble (2:1)	Determination of nitrate by extraction with water & analysed by ion chromatography	E009
Soil	D	Organic Matter	Determination of organic matter by oxidising with potassium dichromate followed by titration with iron (II) sulphate	E010
Soil	AR	PAH - Speciated (EPA 16)	Determination of PAH compounds by extraction in acetone and hexane followed by GC-MS with the use of surrogate and internal standards	E005
Soil	AR	PCB - 7 Congeners	Determination of PCB by extraction with acetone and hexane followed by GC-MS	E008
Soil	D	Petroleum Ether Extract (PEE)	Gravimetrically determined through extraction with petroleum ether	E011
Soil	AR	pH	Determination of pH by addition of water followed by electrometric measurement	E007
Soil	AR	Phenols - Total (monohydric)	Determination of phenols by distillation followed by colorimetry	E021
Soil	D	Phosphate - Water Soluble (2:1)	Determination of phosphate by extraction with water & analysed by ion chromatography	E009
Soil	D	Sulphate (as SO4) - Total	Determination of total sulphate by extraction with 10% HCl followed by ICP-OES	E013
Soil	D	Sulphate (as SO4) - Water Soluble (2:1)	Determination of sulphate by extraction with water & analysed by ion chromatography	E009
Soil	D	Sulphate (as SO4) - Water Soluble (2:1)	Determination of water soluble sulphate by extraction with water followed by ICP-OES	E014
Soil	AR	Sulphide	Determination of sulphide by distillation followed by colorimetry	E018
Soil	D	Sulphur - Total	Determination of total sulphur by extraction with aqua-regia followed by ICP-OES	E024
Soil	AR	SVOC	Determination of semi-volatile organic compounds by extraction in acetone and hexane followed by GC-MS	E006
Soil	AR	Thiocyanate (as SCN)	Determination of thiocyanate by extraction in caustic soda followed by acidification followed by addition of ferric nitrate followed by colorimetry	E017
Soil	D	Toluene Extractable Matter (TEM)	Gravimetrically determined through extraction with toluene	E011
Soil	D	Total Organic Carbon (TOC)	Determination of organic matter by oxidising with potassium dichromate followed by titration with iron (II) sulphate	E010
Soil	AR	TPH CWG (ali: C5- C6, C6-C8, C8-C10, C10-C12, C12-C16, C16-C21, C21-C34, aro: C5-C7, C7-C8, C8-C10, C10-C12, C12-C16, C16-C21, C21-C35)	Determination of hexane/acetone extractable hydrocarbons by GC-FID fractionating with SPE cartridge for C8 to C35. C5 to C8 by headspace GC-MS	E004
Soil	AR	TPH LQM (ali: C5-C6, C6-C8, C8-C10, C10 C12, C12-C16, C16-C35, C35-C44, aro: C5-C7, C7-C8, C8-C10, C10-C12, C12-C16, C16-C21, C21-C35, C35-C44)	Determination of hexane/acetone extractable hydrocarbons by GC-FID fractionating with SPE cartridge for C8 to C44. C5 to C8 by headspace GC-MS	E004
Soil	AR	VOCs	Determination of volatile organic compounds by headspace GC-MS	E001
Soil	AR	VPH (C6-C8 & C8-C10)	Determination of hydrocarbons C6-C8 by headspace GC-MS & C8-C10 by GC-FID	E001

Dear Sir/ Madam,

Thank you for placing your order with Groundsure. Please find enclosed the **Groundsure Enviroinsight** as requested.

If you need further assistance, please do not hesitate to contact our helpline on 01494 712494 quoting the above Soil Consultants Ltd reference number.

Yours faithfully,

Soil Consultants Ltd

Overview of Findings 6
Using this report 10
1. Historical Land Use 11
1. Historical Industrial Sites 12
1.1 Potentially Contaminative Uses identified from 1:10,000 scale Mapping 12
1.2 Additional Information – Historical Tank Database 13
1.3 Additional Information – Historical Energy Features Database 13
1.4 Additional Information – Historical Petrol and Fuel Site Database 14
1.5 Additional Information – Historical Garage and Motor Vehicle Repair Database 14
1.6 Potentially Infilled Land 15
2. Environmental Permits, Incidents and Registers Map 17
2. Environmental Permits, Incidents and Registers 18
2.1 Industrial Sites Holding Licences and/or Authorisations 18
2.1.1 Records of historic IPC Authorisations within 500m of the study site: 18
2.1.2 Records of Part A(1) and IPPC Authorised Activities within 500m of the study site: 18
2.1.3 Records of Red List Discharge Consents (potentially harmful discharges to controlled waters) within 500m of the study site: 18
2.1.4 Records of List 1 Dangerous Substances Inventory Sites within 500m of the study site: 18
2.1.5 Records of List 2 Dangerous Substance Inventory Sites within 500m of the study site: 19
2.1.6 Records of Part A(2) and Part B Activities and Enforcements within 500m of the study site: 19
2.1.7 Records of Category 3 or 4 Radioactive Substances Authorisations: 19
2.1.8 Records of Licensed Discharge Consents within 500m of the study site: 20
2.1.9 Records of Water Industry Referrals (potentially harmful discharges to the public sewer) within 500m of the study site: 20
2.1.10 Records of Planning Hazardous Substance Consents and Enforcements within 500m of the study site: 20
2.2 Dangerous or Hazardous Sites 20
2.3 Environment Agency Recorded Pollution Incidents 20
2.3.1 Records of National Incidents Recording System, List 2 within 500m of the study site: 20
2.3.2 Records of National Incidents Recording System, List 1 within 500m of the study site: 20
2.4 Sites Determined as Contaminated Land under Part 2A EPA 1990 21
3. Landfill and Other Waste Sites Map 22
3. Landfill and Other Waste Sites 23
3.1 Landfill Sites 23
3.1.1 Records from Environment Agency landfill data within 1000m of the study site: 23
3.1.2 Records of Environment Agency historic landfill sites within 1500m of the study site: 23
3.1.3 Records of BGS/DoE non-operational landfill sites within 1500m of the study site: 23
3.1.4 Records of Landfills from Local Authority and Historical Mapping Records within 1500m of the study site: 23
3.2 Other Waste Sites 23
3.2.1 Records of waste treatment, transfer or disposal sites within 500m of the study site: 23
3.2.2 Records of Environment Agency licensed waste sites within 1500m of the study site: 24
4. Current Land Use Map 25
4. Current Land Uses 26
4.1 Current Industrial Data 26
4.2 Petrol and Fuel Sites 26
4.3 National Grid High Voltage Underground Electricity Transmission Cables 27
4.4 National Grid High Pressure Gas Transmission Pipelines 28
5. Geology 29
5.1 Artificial Ground and Made Ground 29

5.2 Superficial Ground and Drift Geology 29
5.3 Bedrock and Solid Geology 29
6 Hydrogeology and Hydrology 30
6a. Aquifer Within Superficial Geology 30
6b. Aquifer Within Bedrock Geology and Abstraction Licenses 31
6c. Hydrogeology – Source Protection Zones and Potable Water Abstraction Licenses 32
6d. Hydrogeology – Source Protection Zones within confined aquifer 33
6e. Hydrology – Detailed River Network and River Quality 34
6.Hydrogeology and Hydrology 35
6.1 Aquifer within Superficial Deposits 35
6.2 Aquifer within Bedrock Deposits 35
6.3 Groundwater Abstraction Licences 35
6.4 Surface Water Abstraction Licences 35
6.5 Potable Water Abstraction Licences 36
6.6 Source Protection Zones 36
6.7 Source Protection Zones within Confined Aquifer 36
6.8 Groundwater Vulnerability and Soil Leaching Potential 36
6.9 River Quality 36
6.9.1 Biological Quality: 37
6.9.2 Chemical Quality: 37
6.10 Detailed River Network 37
6.11 Surface Water Features 37
7a. Environment Agency Flood Map for Planning (from rivers and the sea) 38
7b. Environment Agency Risk of Flooding from Rivers and the Sea (RoFRaS) Map 39
7 Flooding 40
7.1 River and Coastal Zone 2 Flooding 40
7.2 River and Coastal Zone 3 Flooding 40
7.3 Risk of Flooding from Rivers and the Sea (RoFRaS) Flood Rating 40
7.4 Flood Defences 40
7.5 Areas benefiting from Flood Defences 40
7.6 Areas benefiting from Flood Storage 41
7.7 Groundwater Flooding Susceptibility Areas 41
7.7.1 Are there any British Geological Survey groundwater flooding susceptibility areas within 50m of the boundary of the study site? Yes 41
7.7.2 What is the highest susceptibility to groundwater flooding in the search area based on the underlying geological conditions? 41
7.8 Groundwater Flooding Confidence Areas 41
8. Designated Environmentally Sensitive Sites Map 42
8. Designated Environmentally Sensitive Sites 43
8.1 Records of Sites of Special Scientific Interest (SSSI) within 2000m of the study site: 43
8.2 Records of National Nature Reserves (NNR) within 2000m of the study site: 43
8.3 Records of Special Areas of Conservation (SAC) within 2000m of the study site: 43
8.4 Records of Special Protection Areas (SPA) within 2000m of the study site: 43
8.5 Records of Ramsar sites within 2000m of the study site: 44
8.6 Records of Ancient Woodland within 2000m of the study site: 44
8.7 Records of Local Nature Reserves (LNR) within 2000m of the study site: 44
8.8 Records of World Heritage Sites within 2000m of the study site: 44
8.9 Records of Environmentally Sensitive Areas within 2000m of the study site: 45
8.10 Records of Areas of Outstanding Natural Beauty (AONB) within 2000m of the study site: 45
8.11 Records of National Parks (NP) within 2000m of the study site: 45
8.12 Records of Nitrate Sensitive Areas within 2000m of the study site: 45
8.13 Records of Nitrate Vulnerable Zones within 2000m of the study site: 45

8.14 Records of Green Belt land within 2000m of the study site:.....45
9. Natural Hazards Findings 46
9.1 Detailed BGS GeoSure Data.....46
9.1.1 Shrink Swell.....46
9.1.2 Landslides.....46
9.1.3 Soluble Rocks.....46
9.1.4 Compressible Ground.....47
9.1.5 Collapsible Rocks.....47

Overview of Findings

For further details on each dataset, please refer to each individual section in the main report as listed. Where the database has been searched a numerical result will be recorded. Where the database has not been searched '-' will be recorded.

Section 1: Historical Industrial Sites	On-site	0-50	51-250	251-500
1.1 Potentially Contaminative Uses identified from 1:10,000 scale mapping	0	0	11	24
1.2 Additional Information – Historical Tank Database	0	0	0	19
1.3 Additional Information – Historical Energy Features Database	0	0	6	25
1.4 Additional Information – Historical Petrol and Fuel Site Database	0	0	0	0
1.5 Additional Information – Historical Garage and Motor Vehicle Repair Database	0	0	0	18
1.6 Potentially Infilled Land	0	0	7	25

Section 2: Environmental Permits, Incidents and Registers	On-site	0-50m	51-250	251-500
2.1 Industrial Sites Holding Environmental Permits and/or Authorisations				
2.1.1 Records of historic IPC Authorisations	0	0	0	0
2.1.2 Records of Part A(1) and IPPC Authorised Activities	0	0	0	0
2.1.3 Records of Red List Discharge Consents	0	0	0	0
2.1.4 Records of List 1 Dangerous Substances Inventory sites	0	0	4	0
2.1.5 Records of List 2 Dangerous Substances Inventory sites	0	0	0	0
2.1.6 Records of Part A(2) and Part B Activities and Enforcements	0	0	1	1
2.1.7 Records of Category 3 or 4 Radioactive Substances Authorisations	0	0	0	0
2.1.8 Records of Licensed Discharge Consents	0	0	0	0
2.1.9 Records of Water Industry Referrals	0	0	0	0
2.1.10 Records of Planning Hazardous Substance Consents and Enforcements within 500m of the study site	0	0	0	0
2.2 Records of COMAH and NIHHS sites	0	0	0	0
2.3 Environment Agency Recorded Pollution Incidents				
2.3.1 National Incidents Recording System, List 2	0	0	0	0
2.3.2 National Incidents Recording System, List 1	0	0	0	0
2.4 Sites Determined as Contaminated Land under Part 2A EPA 1990	0	0	0	0

Section 3: Landfill and Other Waste Sites	On-site	0-50m	51-250	251-500	501-1000	1000-1500
3.1 Landfill Sites						
3.1.1 Environment Agency Registered Landfill Sites	0	0	0	0	0	Not searched
3.1.2 Environment Agency Historic Landfill Sites	0	0	0	0	0	0
3.1.3 BGS/DoE Landfill Site Survey	0	0	0	0	0	0
3.1.4 Records of Landfills in Local Authority and Historical Mapping Records	0	0	0	0	0	0
3.2 Landfill and Other Waste Sites Findings						
3.2.1 Operational and Non-Operational Waste Treatment, Transfer and Disposal Sites	0	0	0	0	Not searched	Not searched
3.2.2 Environment Agency Licensed Waste Sites	0	0	0	0	0	0

Section 4: Current Land Use	On-site	0-50m	51-250	251-500
4.1 Current Industrial Sites Data	0	0	3	Not searched
4.2 Records of Petrol and Fuel Sites	0	0	0	1
4.3 National Grid Underground Electricity Cables	0	0	0	8
4.4 National Grid Gas Transmission Pipelines	0	0	0	0

Section 5: Geology	
5.1 Are there any records of Artificial Ground and Made Ground present beneath the study site?	No
5.2 Are there any records of Superficial Ground and Drift Geology present beneath the study site?	None
5.3 For records of Bedrock and Solid Geology beneath the study site see the detailed findings section.	

Section 6: Hydrogeology and Hydrology	0-500m
6.1 Are there any records of Strata Classification in the Superficial Geology within 500m of the study site?	No
6.2 Are there any records of Strata Classification in the Bedrock Geology within 500m of the study site?	Yes

	On-site	0-50m	51-250	251-500	501-1000	1000-2000
6.3 Groundwater Abstraction Licences (within 2000m of the study site)	0	0	0	0	0	0
6.4 Surface Water Abstraction Licences (within 2000m of the study site)	0	0	0	0	0	0
6.5 Potable Water Abstraction Licences (within 2000m of the study site)	0	0	0	0	0	0
6.6 Source Protection Zones (within 500m of the study site)	0	0	0	0	Not searched	Not searched
6.7 Source Protection Zones within Confined Aquifer	0	0	0	0	Not searched	Not searched
6.8 Groundwater Vulnerability and Soil Leaching Potential (within 500m of the study site)	1	0	0	1	Not searched	Not searched

	On-site	0-50m	51-250	251-500	501-1000	1000-1500

Section 6: Hydrogeology and Hydrology	0-500m					
6.9 Is there any Environment Agency information on river quality within 1500m of the study site?	No	No	No	No	No	No
6.10 Detailed River Network entries within 500m of the site	0	0	0	2	Not searched	Not searched
6.11 Surface water features within 250m of the study site	No	No	No	Not searched	Not searched	Not searched

Section 7: Flooding	
7.1 Are there any Enviroment Agency Zone 2 floodplains within 250m of the study site?	No
7.2 Are there any Environment Agency Zone 3 floodplains within 250m of the study site	No
7.3 What is the Risk of flooding from Rivers and the Sea (RoFRaS) rating for the study site?	Very Low
7.4 Are there any Flood Defences within 250m of the study site?	No
7.5 Are there any areas benefiting from Flood Defences within 250m of the study site?	No
7.6 Are there any areas used for Flood Storage within 250m of the study site?	No
7.7 What is the maximum BGS Groundwater Flooding susceptibility within 50m of the study site?	Limited potential
7.8 What is the BGS confidence rating for the Groundwater Flooding susceptibility areas?	Low

Section 8: Designated Environmentally Sensitive Sites	On-site	0-50m	51-250	251-500	501-1000	1000-2000
8.1 Records of Sites of Special Scientific Interest (SSSI)	0	0	0	0	2	1
8.2 Records of National Nature Reserves (NNR)	0	0	0	0	0	0
8.3 Records of Special Areas of Conservation (SAC)	0	0	0	0	0	0
8.4 Records of Special Protection Areas (SPA)	0	0	0	0	0	0
8.5 Records of Ramsar sites	0	0	0	0	0	0
8.6 Records of Ancient Woodlands	0	0	0	0	3	2
8.7 Records of Local Nature Reserves (LNR)	0	0	0	0	2	1
8.8 Records of World Heritage Sites	0	0	0	0	0	0
8.9 Records of Environmentally Sensitive Areas	0	0	0	0	0	0
8.10 Records of Areas of Outstanding Natural Beauty (AONB)	0	0	0	0	0	0

Section 8: Designated Environmentally Sensitive Sites	On-site	0-50m	51-250	251-500	501-1000	1000-2000
8.11 Records of National Parks	0	0	0	0	0	0
8.12 Records of Nitrate Sensitive Areas	0	0	0	0	0	0
8.13 Records of Nitrate Vulnerable Zones	0	0	0	0	0	0
8.14 Records of Green Belt land	0	0	0	0	0	0

Section 9: Natural Hazards

9.1 What is the maximum risk of natural ground subsidence?	Moderate
9.1.1 What is the maximum Shrink-Swell hazard rating identified on the study site?	Moderate
9.1.2 What is the maximum Landslides hazard rating identified on the study site?	Very Low
9.1.3 What is the maximum Soluble Rocks hazard rating identified on the study site?	Negligible
9.1.4 What is the maximum Compressible Ground hazard rating identified on the study site?	Negligible
9.1.5 What is the maximum Collapsible Rocks hazard rating identified on the study site?	Very Low
9.1.6 What is the maximum Running Sand hazard rating identified on the study site?	Very Low
9.2 Radon	
9.2.1 Is the property in a Radon Affected Area as defined by the Health Protection Agency (HPA) and if so what percentage of homes are above the Action Level?	The property is not in a Radon Affected Area, as less than 1% of properties are above the Action Level.
9.2.2 Is the property in an area where Radon Protection are required for new properties or extensions to existing ones as described in publication BR211 by the Building Research Establishment?	No radon protective measures are necessary.

Section 10: Mining

10.1 Are there any coal mining areas within 75m of the study site?	No
10.2 Are there any Non-Coal Mining areas within 50m of the study site boundary?	No
10.3 Are there any brine affected areas within 75m of the study site?	No

Using this report

The following report is designed by Environmental Consultants for Environmental Professionals bringing together the most up-to-date market leading environmental data. This report is provided under and subject to the Terms & Conditions agreed between Groundsure and the Client. The document contains the following sections:

1. Historical Industrial Sites

Provides information on past land uses that may pose a risk to the study site in terms of potential contamination from activities or processes. Potentially Infilled Land features are also included. This search is conducted using radii of up to 500m.

2. Environmental Permits, Incidents and Registers

Provides information on Regulated Industrial Activities and Pollution Incidents as recorded by Regulatory Authorities, and sites determined as Contaminated Land. This search is conducted using radii up to 500m.

3. Landfills and Other Waste Sites

Provides information on landfills and other waste sites that may pose a risk to the study site. This search is conducted using radii up to 1500m.

4. Current Land Uses

Provides information on current land uses that may pose a risk to the study site in terms of potential contamination from activities or processes. These searches are conducted using radii of up to 500m. This includes information on potentially contaminative industrial sites, petrol stations and fuel sites as well as high pressure gas pipelines and underground electricity transmission lines.

5. Geology

Provides information on artificial and superficial deposits and bedrock beneath the study site.

6. Hydrogeology and Hydrology

Provides information on productive strata within the bedrock and superficial geological layers, abstraction licenses, Source Protection Zones (SPZs) and river quality. These searches are conducted using radii of up to 2000m.

7. Flooding

Provides information on river and coastal flooding, flood defences, flood storage areas and groundwater flood areas. This search is conducted using radii of up to 250m.

8. Designated Environmentally Sensitive Sites

Provides information on the Sites of Special Scientific Interest (SSSI), National Nature Reserves (NNR), Special Areas of Conservation (SAC), Special Protection Areas (SPA), Ramsar sites, Local Nature Reserves (LNR), Areas of Outstanding Natural Beauty (AONB), National Parks (NP), Environmentally Sensitive Areas, Nitrate Sensitive Areas, Nitrate Vulnerable Zones and World Heritage Sites and Scheduled Ancient Woodland. These searches are conducted using radii of up to 2000m.

9. Natural Hazards

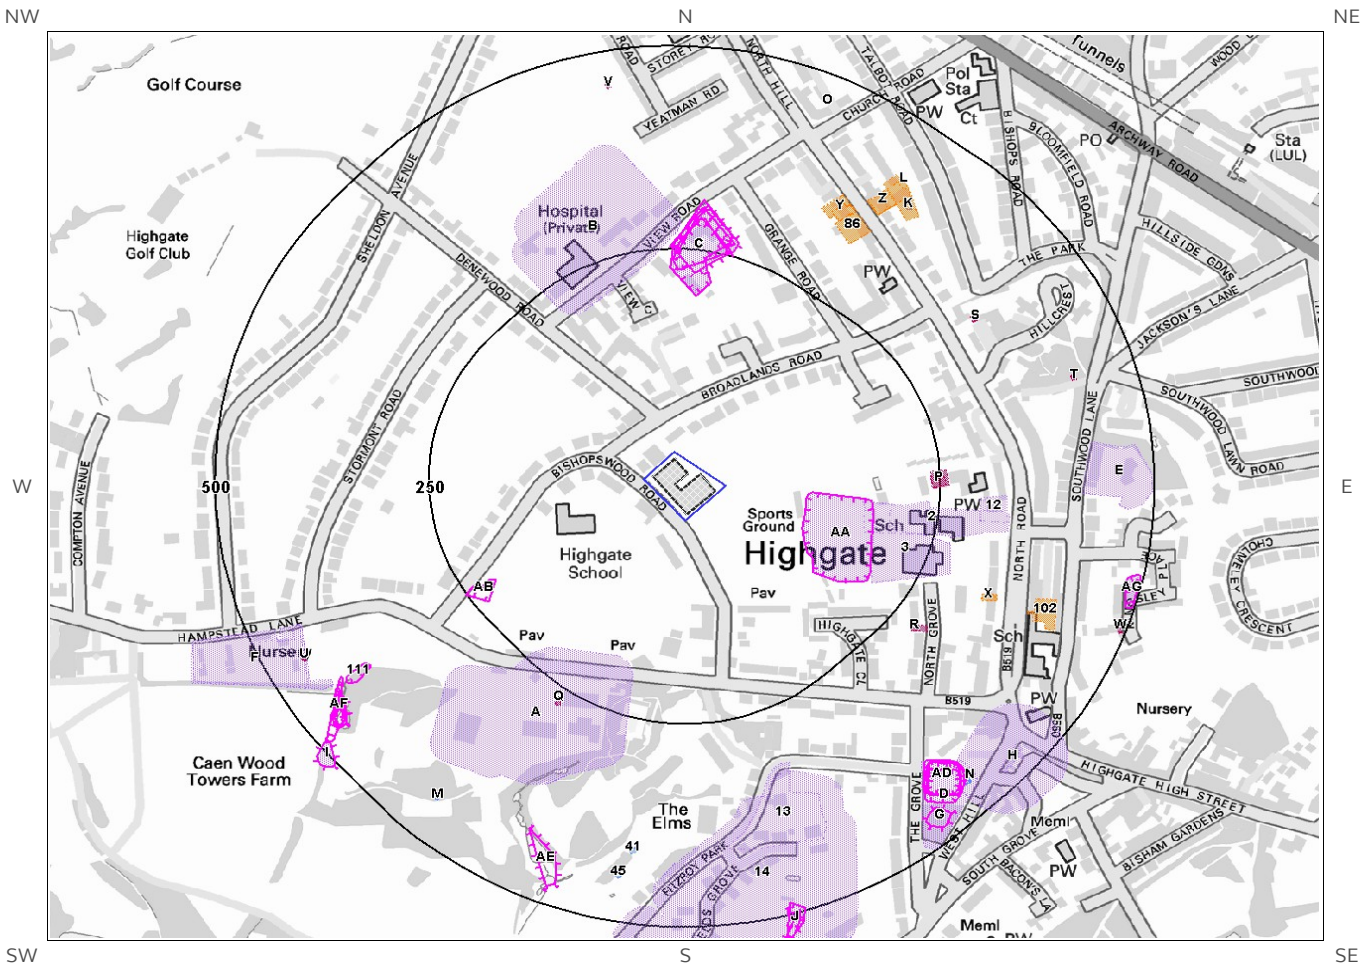
Provides information on a range of natural hazards that may pose a risk to the study site. These factors include natural ground subsidence and radon..

10. Mining

Provides information on areas of coal and non-coal mining and brine affected areas.

11. Contacts

This section of the report provides contact points for statutory bodies and data providers that may be able to provide further information on issues raised within this report. Alternatively, Groundsure provide a free Technical Helpline (08444 159000) for further information and guidance.



Note: Maps

Only certain features are placed on the maps within the report. All features represented on maps found within this search are given an identification number. This number identifies the feature on the mapping and correlates it to the additional information provided below. This identification number precedes all other information and takes the following format -Id: 1, Id: 2, etc. Where numerous features on the same map are in such close proximity that the numbers would obscure each other a letter identifier is used instead to represent the features. (e.g. Three features which overlap may be given the identifier “A” on the map and would be identified separately as features 1A, 3A, 10A on the data tables provided).

Where a feature is reported in the data tables to a distance greater than the map area, it is noted in the data table as “Not Shown”.

All distances given in this report are in Metres (m). Directions are given as compass headings such as N: North, E: East, NE: North East from the nearest point of the study site boundary.

1. Historical Industrial Sites

1.1 Potentially Contaminative Uses identified from 1:10,000 scale Mapping

The systematic analysis of data extracted from standard 1:10,560 and 1:10,000 scale historical maps provides the following information:

Records of sites with a potentially contaminative past land use within 500m of the search boundary: 35

ID	Distance [m]	Direction	Use	Date
1AA	95	E	Unspecified Ground Workings	1894
2	160	E	Fire Engine Station	1938
3	171	E	Nursery	1958
4A	184	SW	Hospital	1974
5A	184	SW	Hospital	1996
6C	194	N	Unspecified Ground Workings	1894
7B	203	NW	Hospital	1965
8B	203	NW	Hospital	1974
9C	222	N	Unspecified Ground Workings	1958
10C	225	N	Unspecified Heap	1920
11AC	244	N	Unspecified Ground Workings	1949
12	297	E	Fire Station	1920
13	319	S	Nursery	1958
14	330	S	Nursery	1974
15D	405	SE	Water Works	1869
16D	405	SE	Water Works	1879
17H	414	SE	Police Station	1869
18E	416	E	Hospital	1965
19E	416	E	Hospital	1974
20E	416	E	Hospital	1996

51N	459	SE	Unspecified Tank	1991
52N	459	SE	Unspecified Tank	1870
53O	463	NE	Unspecified Tank	1991
54O	464	NE	Unspecified Tank	1993

1.3 Additional Information – Historical Energy Features Database

The systematic analysis of data extracted from High Detailed 1:1,250 and 1:2,500 scale historical maps provides the following information.

Records of historical energy features within 500m of the search boundary: 31

ID	Distance (m)	Direction	Use	Date
55P	238	E	Electricity Substation	1951
56P	238	E	Electricity Substation	1967

57P	239	E	Electricity Substation	1977
58P	239	E	Electricity Substation	1968
59P	239	E	Electricity Substation	1950
60P	239	E	Electricity Substation	1991
61Q	259	SW	Electricity Substation	1975
62Q	260	SW	Electricity Substation	1991
63R	276	SE	Electricity Substation	1967
64R	276	SE	Electricity Substation	1991
65R	276	SE	Electricity Substation	1968
66R	276	SE	Electricity Substation	1977
67S	351	NE	Electricity Substation	1991
68S	351	NE	Electricity Substation	1968
69S	351	NE	Electricity Substation	1950
70S	351	NE	Electricity Substation	1977
71S	352	NE	Electricity Substation	1967
72S	352	NE	Electricity Substation	1951
73T	424	E	Electricity Substation	1991
74T	424	E	Electricity Substation	1977
75T	424	E	Electricity Substation	1968
76T	424	E	Electricity Substation	1967

81V	454	N	Electricity Substation	1985
82W	487	E	Electricity Substation	1967
83W	488	E	Electricity Substation	1968
84W	488	E	Electricity Substation	1977
85W	490	E	Electricity Substation	1991

1.4 Additional Information – Historical Petrol and Fuel Site Database

The systematic analysis of data extracted from High Detailed 1:1,250 and 1:2,500 scale historical maps provides the following information.

Records of historical petrol stations and fuel sites within 500m of the search boundary: 0

Database searched and no data found.

1.5 Additional Information – Historical Garage and Motor Vehicle Repair Database

The systematic analysis of data extracted from High Detailed 1:1,250 and 1:2,500 scale historical maps provides the following information.

Records of historical garage and motor vehicle repair sites within 500m of the search boundary: 18

ID	Distance (m)	Direction	Use	Date
86	326	NE	Garage	1993
87X	327	SE	Garage	1977
88X	327	SE	Garage	1962
89X	327	SE	Garage	1968
90Y	340	NE	Garage	1991
91X	342	SE	Garage	1967
92Y	343	NE	Garage	1969
93Y	344	NE	Garage	1962
94Y	344	NE	Garage	1978
95Y	344	NE	Garage	1976
96Y	344	NE	Garage and Store	1950

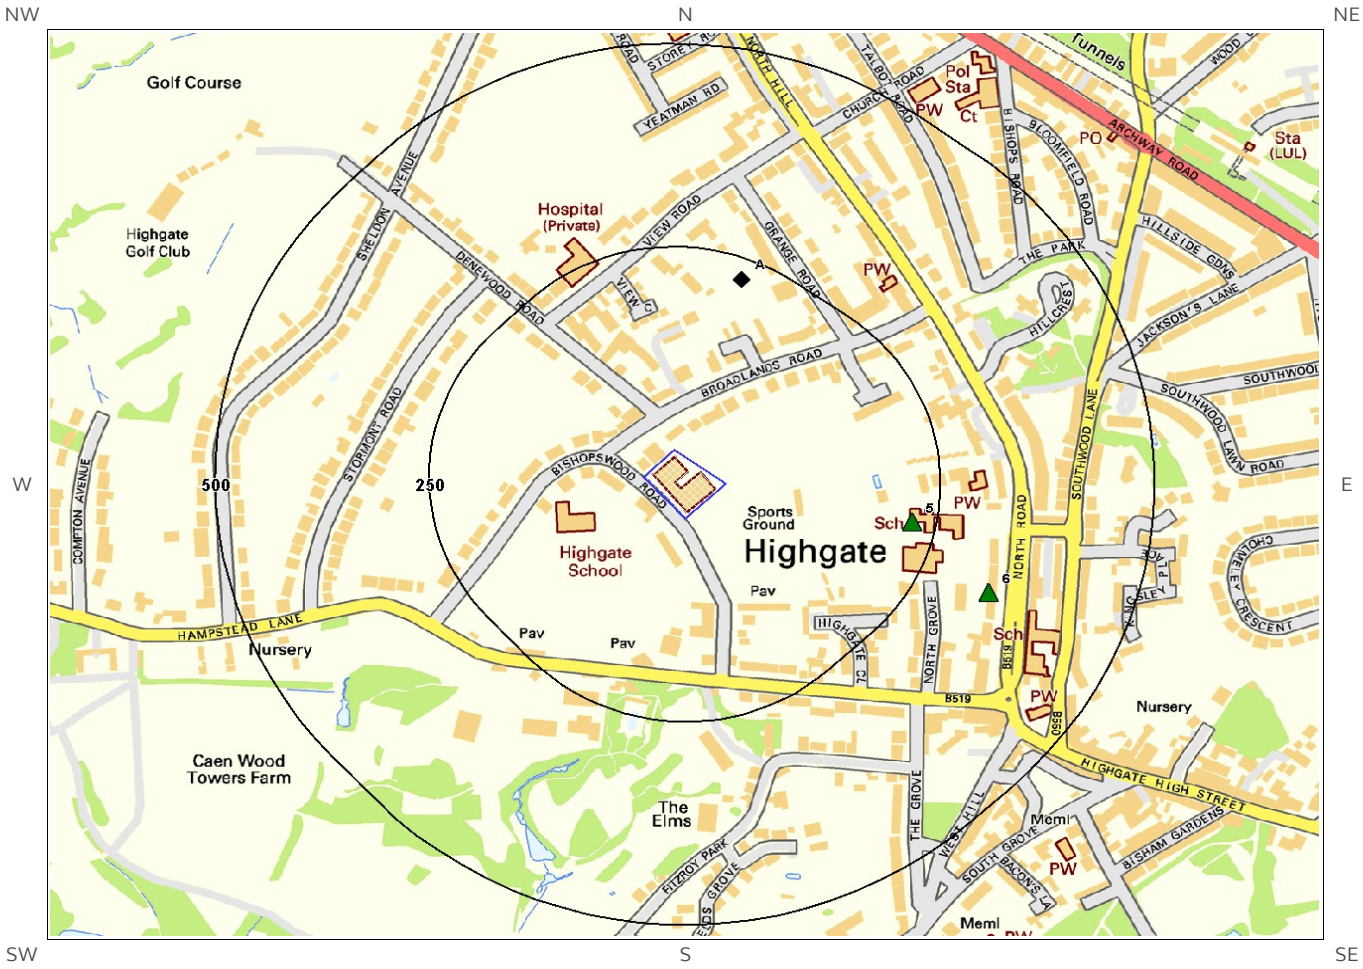
98K	375	NE	Garage	1978
99K	375	NE	Garage	1976
100Z	375	NE	Garage	1993
101Z	375	NE	Garage	1991
102	384	SE	Garage	1977
103L	388	NE	Garage	1969

1.6 Potentially Infilled Land



Records of Potentially Infilled Features from 1:10,000 scale mapping within 500m of the study site: 32

The following Historical Potentially Infilled Features derived from the Historical Mapping information is provided by Groundsure:

ID	Distance(m)	Direction	Use	Date
104AA	95	E	Unspecified Ground Workings	1894
105C	194	N	Unspecified Ground Workings	1894
106AB	212	SW	Pond	1869
107AB	212	SW	Pond	1879
108C	222	N	Unspecified Ground Workings	1958
109C	225	N	Unspecified Heap	1920
110AC	244	N	Unspecified Ground Workings	1949
111	392	SW	Pond	1879
112AD	408	SE	Reservoir	1949
113AD	411	SE	Reservoir	1938
114AD	412	SE	Reservoir	1965
115AD	412	SE	Covered Reservoir	1974
116AD	412	SE	Covered Reservoir	1996

117D	417	SE	Reservoir	1920
118AE	420	SW	Ponds	1974
119AE	420	SW	Ponds	1996
120AF	428	SW	Pond	1949
121AF	439	SW	Pond	1894
122AF	440	SW	Pond	1958
123AF	442	SW	Pond	1974
124AF	442	SW	Pond	1965
125AF	442	SW	Pond	1996
126G	459	SE	Unspecified Pit	1869
127G	459	SE	Unspecified Pit	1879
128AG	481	E	Unspecified Pit	1949
129J	486	S	Unspecified Heap	1938
130I	489	SW	Unspecified Heap	1949
131I	489	SW	Unspecified Heap	1974
132I	489	SW	Unspecified Heap	1996
133I	489	SW	Unspecified Heap	1965
134I	489	SW	Unspecified Heap	1958
135J	496	S	Unspecified Ground Workings	1920

2. Environmental Permits, Incidents and Registers

2.1 Industrial Sites Holding Licences and/or Authorisations

Searches of information provided by the Environment Agency and Local Authorities reveal the following information:

2.1.1 Records of historic IPC Authorisations within 500m of the study site:

0

Database searched and no data found.

2.1.2 Records of Part A(1) and IPPC Authorised Activities within 500m of the study site:

0

Database searched and no data found.

2.1.3 Records of Red List Discharge Consents (potentially harmful discharges to controlled waters) within 500m of the study site:

0

Database searched and no data found.

2.1.4 Records of List 1 Dangerous Substances Inventory Sites within 500m of the study site:

4

The following List 1 Dangerous Substance Inventory Site records are represented as points on the Environmental Permits, Incidents and Registers Map:

ID	Distance (m)	Direction	NGR	Details	
1A	223	N	528000 188000	Name: J. Bull 265 Arch Way Road London N6 Status: Not Active Receiving Water: -	Authorised Substances: -
2A	223	N	528000 188000	Name: J Bull, 256 Archway Rd, London N6 Status: Not Active Receiving Water: -	Authorised Substances: -
3A	223	N	528000 188000	Name: J. Bull 256 Archway Rd London N6 Status: Not Active Receiving Water: -	Authorised Substances: -

ID	Distance (m)	Direction	NGR	Details	
4A	223	N	528000 188000	Name: J Bull, 256 Archway Rd, London N6 Status: Not Active Receiving Water: -	Authorised Substances: -

2.1.5 Records of List 2 Dangerous Substance Inventory Sites within 500m of the study site:

0

Database searched and no data found.

2.1.6 Records of Part A(2) and Part B Activities and Enforcements within 500m of the study site:

2

The following Part A(2) and Part B Activities are represented as points on the Environmental Permits, Incidents and Registers Map:

ID	Distance (m)	Direction	NGR	Details	
5	222	E	528200 187700	Address: North Rd Serv Stn, North Rd, N6 4BE Process: Petrol Vapour Recovery Process Status: Historical Permit Permit Type: Part B	Enforcement: No Enforcement Notified Date of Enforcement: No Enforcement Notified Comment: No Enforcement Notified
6	335	SE	528289 187613	Address: John Nichol Service Station, 31-33 North Rd, Highgate, N6 4BE Process: Petrol Station Status: Current Permit Permit Type: Part B	Enforcement: No Enforcement Notified Date of Enforcement: No Enforcement Notified Comment: No Enforcement Notified

2.1.7 Records of Category 3 or 4 Radioactive Substances Authorisations:

0

Database searched and no data found.

2.1.8 Records of Licensed Discharge Consents within 500m of the study site:

0

Database searched and no data found.

2.1.9 Records of Water Industry Referrals (potentially harmful discharges to the public sewer) within 500m of the study site:

0

Database searched and no data found.

2.1.10 Records of Planning Hazardous Substance Consents and Enforcements within 500m of the study site:

0

Database searched and no data found.

2.2 Dangerous or Hazardous Sites

Records of COMAH & NIHHS sites within 500m of the study site: 0

Database searched and no data found.

2.3 Environment Agency Recorded Pollution Incidents

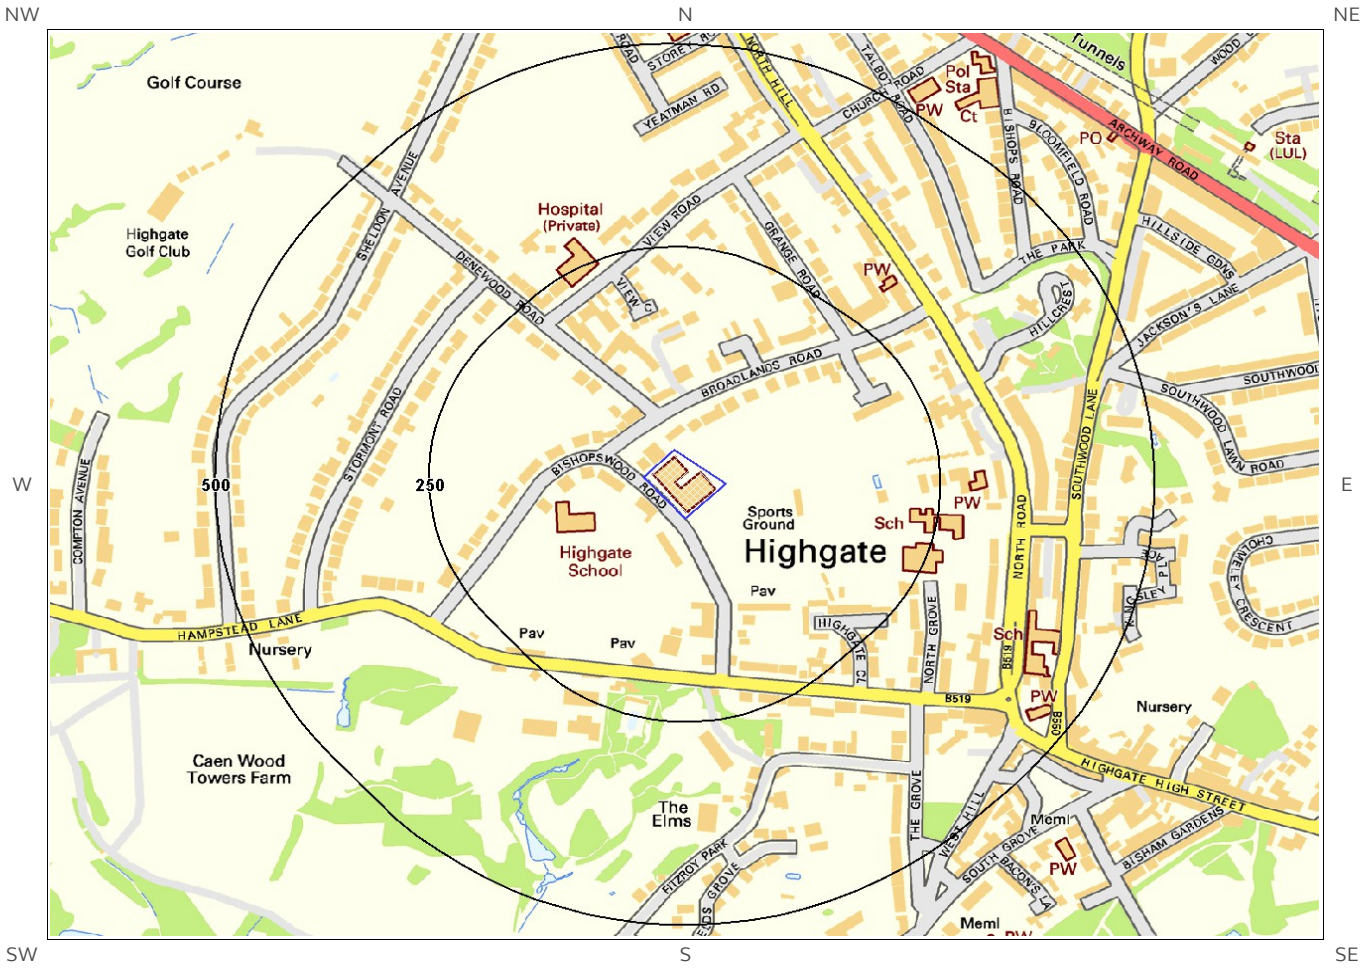
2.3.1 Records of National Incidents Recording System, List 2 within 500m of the study site:

0

Database searched and no data found.

2.3.2 Records of National Incidents Recording System, List 1 within 500m of the study site:

0



Database searched and no data found.

2.4 Sites Determined as Contaminated Land under Part 2A EPA 1990

How many records of sites determined as contaminated land under Section 78R of the Environmental Protection Act 1990 are there within 500m of the study site?	0

Database searched and no data found.

Search Buffers (m)

Current Industrial Sites

Petrol & Fuel Sites

Electricity Transmission Cables

Gas Transmission Pipelines

4. Current Land Uses

4.1 Current Industrial Data

Records of potentially contaminative industrial sites within 250m of the study site: 3

The following records are represented as points on the Current Land Uses map.

ID	Distance (m)	Direction	Company	NGR	Address	Activity	Category
1	87	E	Rifle Range	528067 187728	N6	Shooting Facilities	Sports Complex
2	107	W	Caribbean Investment Profiles Ltd	527784 187792	6b, Bishopswood Road, London, N6 4NY	Published Goods	Industrial Products
3	248	E	Electricity Sub Station	528231 187756	N6	Electrical Features	Infrastructure and Facilities

4.2 Petrol and Fuel Sites

Records of petrol or fuel sites within 500m of the study site: 1

The following petrol or fuel site records provided by Catalist are represented as points on the Current Land Use map:

ID	Distance (m)	Direction	NGR	Company	Address	LPG	Status
4	363	SE	528315 187603	Total	John Nichol Cars, 31-33, North Road, North Road, Highgate, London, Greater London, N6 4BE	No	Open

4.3 National Grid High Voltage Underground Electricity Transmission Cables

This dataset identifies the high voltage electricity transmission lines running between generating power plants and electricity substations. The dataset does not include the electricity distribution network (smaller, lower voltage cables distributing power from substations to the local user network). This information has been extracted from databases held by National Grid and is provided for information only with no guarantee as to its completeness or accuracy. National Grid do not offer any warranty as to the accuracy of the available data and are excluded from any liability for any such inaccuracies or errors.

Records of National Grid high voltage underground electricity transmission cables within 500m of the study site: 8

The following Underground Electricity Transmission Cable records are represented as linear features on the Current Land Use map:

ID	Distance (m)	Direction	Details	
5	324	NE	Cable Set: - Cable Route: - Cable Make: -	Cable Type: DECOMMISSIONED Operating Voltage (kV): 275 Year of installation: - Cable in tunnel: -
6	330	E	Cable Set: - Cable Route: - Cable Make: -	Cable Type: DECOMMISSIONED Operating Voltage (kV): 275 Year of installation: - Cable in tunnel: -
7	343	NE	Cable Set: - Cable Route: - Cable Make: -	Cable Type: DECOMMISSIONED Operating Voltage (kV): 275 Year of installation: - Cable in tunnel: -
8	343	E	Cable Set: - Cable Route: - Cable Make: -	Cable Type: DECOMMISSIONED Operating Voltage (kV): 275 Year of installation: - Cable in tunnel: -
9	373	NE	Cable Set: - Cable Route: - Cable Make: -	Cable Type: DECOMMISSIONED Operating Voltage (kV): 275 Year of installation: - Cable in tunnel: -
10	408	E	Cable Set: - Cable Route: - Cable Make: -	Cable Type: DECOMMISSIONED Operating Voltage (kV): 275 Year of installation: - Cable in tunnel: -
11	435	N	Cable Set: - Cable Route: - Cable Make: -	Cable Type: DECOMMISSIONED Operating Voltage (kV): 275 Year of installation: - Cable in tunnel: -
12	468	SE	Cable Set: - Cable Route: - Cable Make: -	Cable Type: DECOMMISSIONED Operating Voltage (kV): 275 Year of installation: - Cable in tunnel: -

4.4 National Grid High Pressure Gas Transmission Pipelines

This dataset identifies high-pressure, large diameter pipelines which carry gas between gas terminals, power stations, compressors and storage facilities. The dataset does not include the Local Transmission System (LTS) which supplies gas directly into homes and businesses. This information has been extracted from databases held by National Grid and is provided for information only with no guarantee as to its completeness or accuracy. National Grid do not offer any warranty as to the accuracy of the available data and are excluded from any liability for any such inaccuracies or errors.

Records of National Grid high pressure gas transmission pipelines within 500m of the study site: 0

Database searched and no data found.

5. Geology

5.1 Artificial Ground and Made Ground

Database searched and no data found.

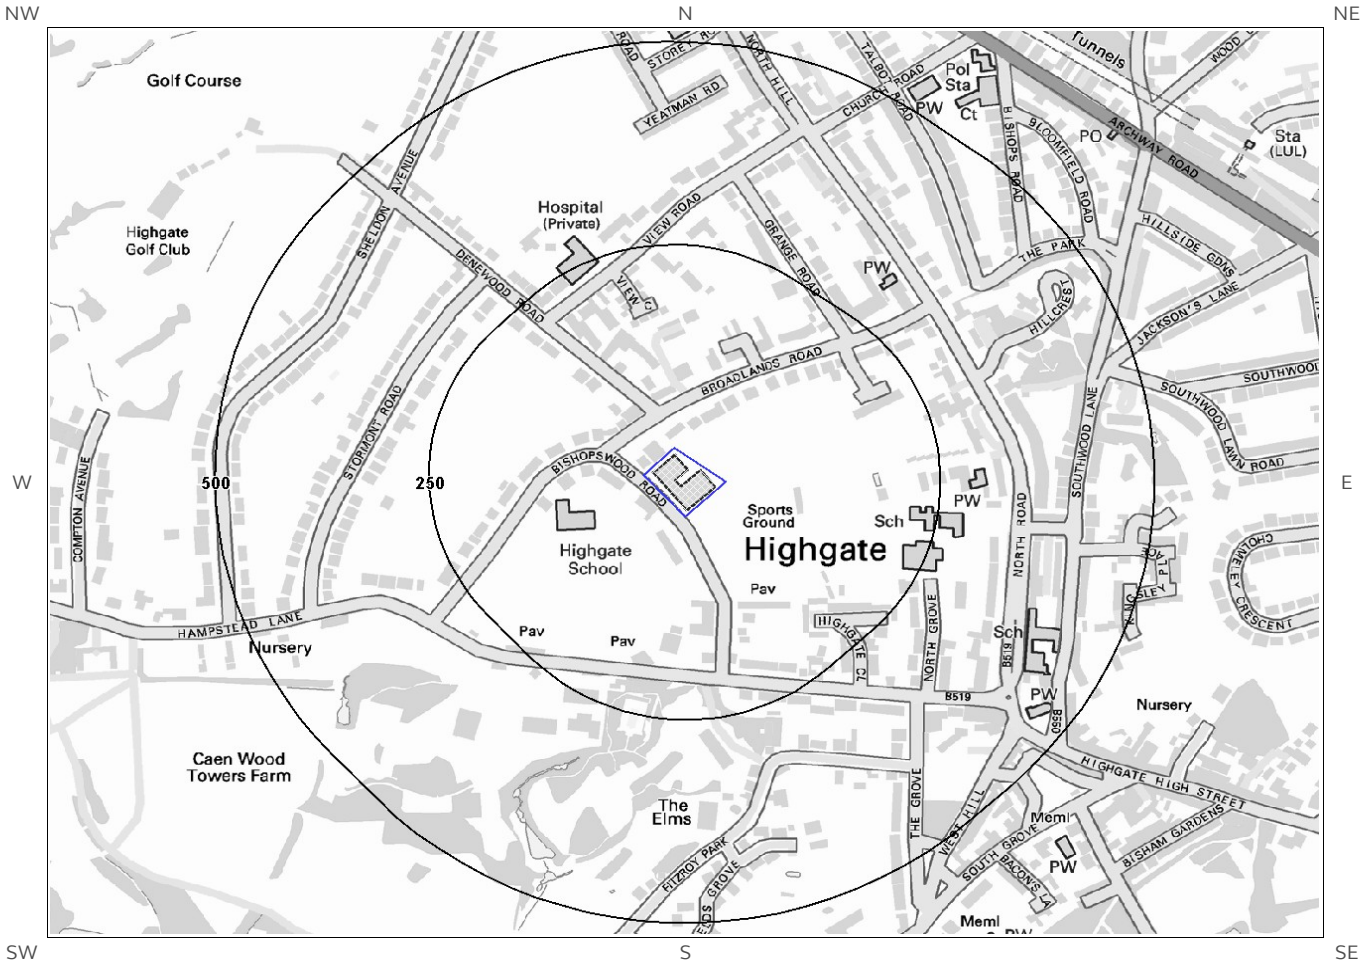
The database has been searched on site, including a 50m buffer.

5.2 Superficial Ground and Drift Geology

Database searched and no data found.

The database has been searched on site, including a 50m buffer.

5.3 Bedrock and Solid Geology



The database has been searched on site, including a 50m buffer.

6.Hydrogeology and Hydrology

6.1 Aquifer within Superficial Deposits

Are there records of strata classification within the superficial geology at or in proximity to the property? No

Database searched and no data found.

From 1 April 2010, the Environment Agency's Groundwater Protection Policy has been using aquifer designations consistent with the Water Framework Directive. For further details on the designation and interpretation of this information, please refer to the Groundsure Enviroinsight User Guide.

6.2 Aquifer within Bedrock Deposits

Are there records of strata classification within the bedrock geology at or in proximity to the property? Yes

From 1 April 2010, the Environment Agency's Groundwater Protection Policy has been using aquifer designations consistent with the Water Framework Directive. For further details on the designation and interpretation of this information, please refer to the Groundsure Enviroinsight User Guide.

The following aquifer records are shown on the Aquifer within Bedrock Geology Map (6b):

ID	Distance (m)	Direction	Designation	Description
1	0	On Site	Secondary A	Permeable layers capable of supporting water supplies at a local rather than strategic scale, and in some cases forming an important source of base flow to rivers. These are generally aquifers formerly classified as minor aquifers
2	494	NW	Unproductive	These are rock layers or drift deposits with low permeability that have negligible significance for water supply or river base flow

6.3 Groundwater Abstraction Licences

Are there any Groundwater Abstraction Licences within 2000m of the study site? No

Database searched and no data found.

6.4 Surface Water Abstraction Licences

Are there any Surface Water Abstraction Licences within 2000m of the study site? No

Database searched and no data found.

6.5 Potable Water Abstraction Licences

Are there any Potable Water Abstraction Licences within 2000m of the study site? No

Database searched and no data found.

6.6 Source Protection Zones

Are there any Source Protection Zones within 500m of the study site? No

Database searched and no data found.

6.7 Source Protection Zones within Confined Aquifer

Are there any Source Protection Zones within the Confined Aquifer within 500m of the study site? No

Historically, Source Protection Zone maps have been focused on regulation of activities which occur at or near the ground surface, such as prevention of point source pollution and bacterial contamination of water supplies. Sources in confined aquifers were often considered to be protected from these surface pressures due to the presence of a low permeability confining layer (e.g. glacial till, clay). The increased interest in subsurface activities such as onshore oil and gas exploration, ground source heating and cooling requires protection zones for confined sources to be marked on SPZ maps where this has not already been done.

Database searched and no data found.

6.8 Groundwater Vulnerability and Soil Leaching Potential

Is there any Environment Agency information on groundwater vulnerability and soil leaching potential within 500m of the study site? Yes

Distance (m)	Direction	Classification	Soil Vulnerability Category	Description
0	On Site	Minor Aquifer/High Leaching Potential	HU	Soil information for urban areas and restored mineral workings. These soils are therefore assumed to be highly permeable in the absence of site-specific information.
326	SW	Minor Aquifer/Intermediate Leaching Potential	I1	Soils which can possibly transmit a wide range of pollutants.

6.9 River Quality

Is there any Environment Agency information on river quality within 1500m of the study site? No

6.9.1 Biological Quality:

Database searched and no data found.

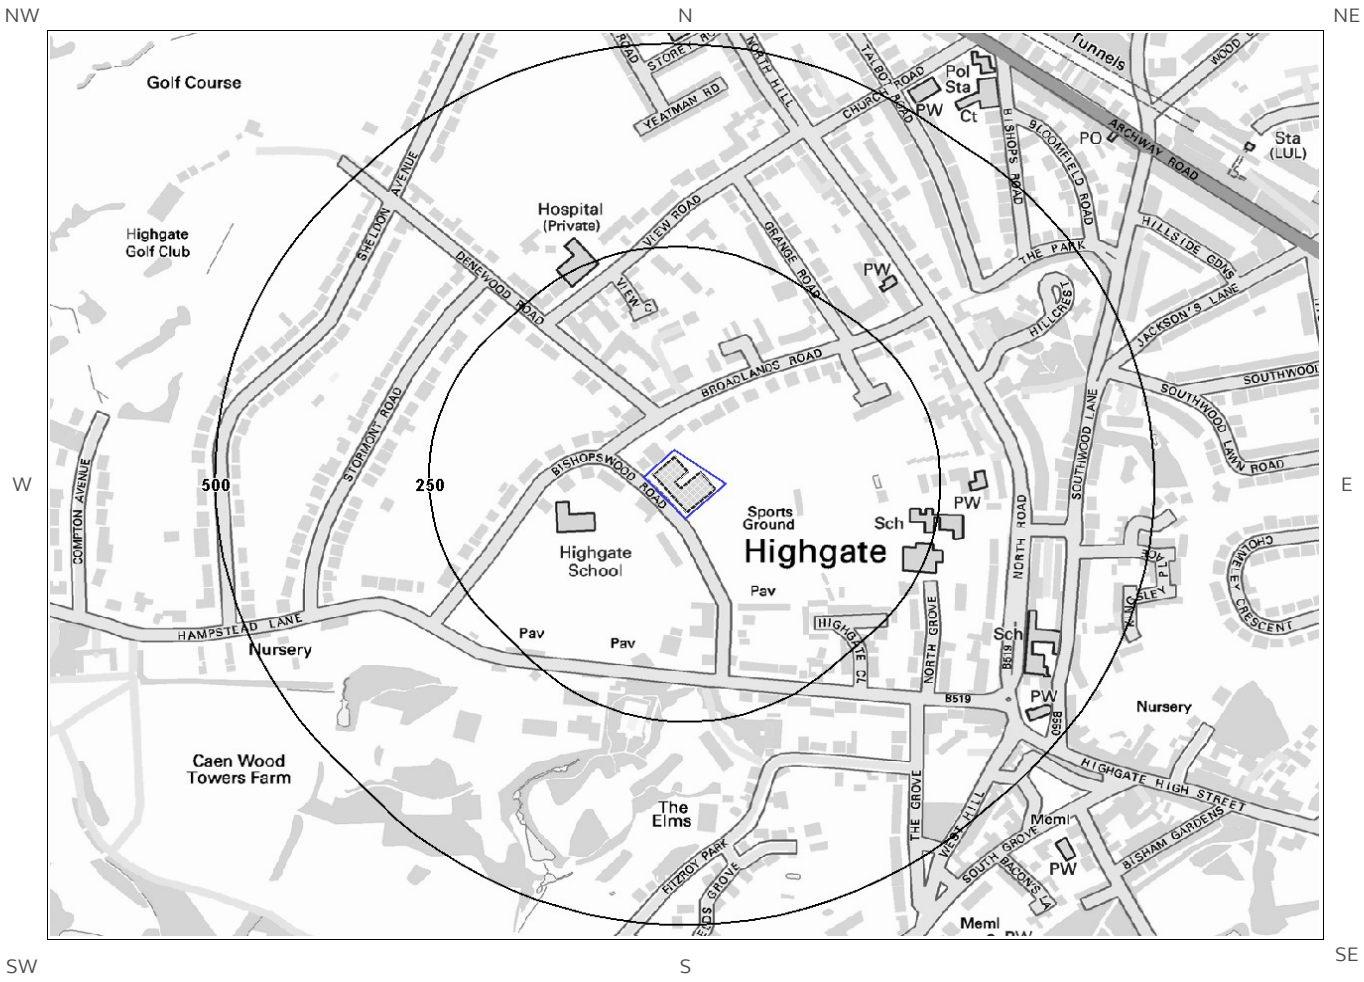
6.9.2 Chemical Quality:

Database searched and no data found.

6.10 Detailed River Network

Are there any Detailed River Network entries within 500m of the study site? Yes

The following Detailed River Network records are represented on the Hydrology Map (6e):



ID	Distance (m)	Direction	Details	
1	320	SW	River Name: - Welsh River Name: - Alternative Name: -	River Type: Secondary River Main River Status: Currently Undefined
2	480	S	River Name: - Welsh River Name: - Alternative Name: -	River Type: Tertiary River Main River Status: Currently Undefined

6.11 Surface Water Features

Are there any surface water features within 250m of the study site? No

Database searched and no data found.

7 Flooding

7.1 River and Coastal Zone 2 Flooding

Is the site within 250m of an Environment Agency Zone 2 floodplain? No

Environment Agency Zone 2 floodplains estimate the annual probability of flooding as between 1 in 1000 (0.1%) and 1 in 100 (1%) from rivers and between 1 in 1000 (0.1%) and 1 in 200 (0.5%) from the sea. Any relevant data is represented on Map 7a – Flood Map for Planning:

Database searched and no data found.

7.2 River and Coastal Zone 3 Flooding

Is the site within 250m of an Environment Agency Zone 3 floodplain? No

Zone 3 shows the extent of a river flood with a 1 in 100 (1%) or greater chance of occurring in any year or a sea flood with a 1 in 200 (0.5%) or greater chance of occurring in any year. Any relevant data is represented on Map 7a – Flood Map for Planning.

Database searched and no data found.

7.3 Risk of Flooding from Rivers and the Sea (RoFRaS) Flood Rating

What is the highest risk of flooding onsite? Very Low

The Environment Agency RoFRaS database provides an indication of river and coastal flood risk at a national level on a 50m grid with the flood rating at the centre of the grid calculated and given above. The data considers the probability that the flood defences will overtop or breach by considering their location, type, condition and standard of protection.

RoFRaS data for the study site indicates the property is in an area with a Very Low (less than 1 in 1000) chance of flooding in any given year.

7.4 Flood Defences

Are there any Flood Defences within 250m of the study site? No

Database searched and no data found.

7.5 Areas benefiting from Flood Defences

Are there any areas benefiting from Flood Defences within 250m of the study site? No

7.6 Areas benefiting from Flood Storage

Are there any areas used for Flood Storage within 250m of the study site? No

---

7.7 Groundwater Flooding Susceptibility Areas

7.7.1 Are there any British Geological Survey groundwater flooding susceptibility areas within 50m of the boundary of the study site? Yes

Does this relate to Clearwater Flooding or Superficial Deposits Flooding? Clearwater Flooding

Notes: Groundwater flooding may either be associated with shallow unconsolidated sedimentary aquifers which overlie unproductive aquifers (Superficial Deposits Flooding), or with unconfined aquifers (Clearwater Flooding).

7.7.2 What is the highest susceptibility to groundwater flooding in the search area based on the underlying geological conditions?

Limited potential

Where limited potential for groundwater flooding to occur is indicated, this means that although given the geological conditions there may be a groundwater flooding hazard, unless other relevant information, e.g. records of previous flooding, suggests groundwater flooding has occurred before in this area, you need take no further action in relation to groundwater flooding hazard.

7.8 Groundwater Flooding Confidence Areas

What is the British Geological Survey confidence rating in this result? Low

Notes: Groundwater flooding is defined as the emergence of groundwater at the ground surface or the rising of groundwater into man-made ground under conditions where the normal range of groundwater levels is exceeded.

The confidence rating is on a threefold scale - Low, Moderate and High. This provides a relative indication of the BGS confidence in the accuracy of the susceptibility result for groundwater flooding. This is based on the amount and precision of the information used in the assessment. In areas with a relatively lower level of confidence the susceptibility result should be treated with more caution. In other areas with higher levels of confidence the susceptibility result can be used with more confidence.

9. Natural Hazards Findings

9.1 Detailed BGS GeoSure Data

BGS GeoSure Data has been searched to 50m. The data is included in tabular format. If you require further information on geology and ground stability, please obtain a Groundsure GeoInsight, available from our website. The following information has been found:

9.1.1 Shrink Swell

What is the maximum Shrink-Swell*[*] hazard rating identified on the study site? Moderate

The following natural subsidence information provided by the British Geological Survey is not represented on mapping:

Hazard
Ground conditions predominantly high plasticity. Do not plant or remove trees or shrubs near to buildings without expert advice about their effect and management. For new build, consideration should be given to advice published by the National House Building Council (NHBC) and the Building Research Establishment (BRE). There is a probable increase in construction cost to reduce potential shrink-swell problems. For existing property, there is a probable increase in insurance risk during droughts or where vegetation with high moisture demands is present.

9.1.2 Landslides

What is the maximum Landslide* hazard rating identified on the study site? Very Low

The following natural subsidence information provided by the British Geological Survey is not represented on mapping:

Hazard
Slope instability problems are unlikely to be present. No special actions required to avoid problems due to landslides. No special ground investigation required, and increased construction costs or increased financial risks are unlikely due to potential problems with landslides.

9.1.3 Soluble Rocks

What is the maximum Soluble Rocks* hazard rating identified on the study site? Negligible

The following natural subsidence information provided by the British Geological Survey is not represented on mapping:

Hazard
Soluble rocks are present, but unlikely to cause problems except under exceptional conditions. No special actions required to avoid problems due to soluble rocks. No special ground investigation required, and increased construction costs or increased financial risks are unlikely due to potential problems with soluble rocks.

* This indicates an automatically generated 50m buffer and site.

9.1.4 Compressible Ground

What is the maximum Compressible Ground* hazard rating identified on the study site? Negligible

The following natural subsidence information provided by the British Geological Survey is not represented on mapping:

Hazard
No indicators for compressible deposits identified. No special actions required to avoid problems due to compressible deposits. No special ground investigation required, and increased construction costs or increased financial risks are unlikely due to potential problems with compressible deposits.

9.1.5 Collapsible Rocks

What is the maximum Collapsible Rocks* hazard rating identified on the study site? Very Low

The following natural subsidence information provided by the British Geological Survey is not represented on mapping:

Hazard
Deposits with potential to collapse when loaded and saturated are unlikely to be present. No special ground investigation required or increased construction costs or increased financial risk due to potential problems with collapsible deposits.

9.1.6 Running Sand

What is the maximum Running Sand** hazard rating identified on the study site? Very Low

The following natural subsidence information provided by the British Geological Survey is not represented on mapping:

Hazard
Very low potential for running sand problems if water table rises or if sandy strata are exposed to water. No special actions required, to avoid problems due to running sand. No special ground investigation required, and increased construction costs or increased financial risks are unlikely due to potential problems with running sand.

9.2 Radon

9.2.1 Radon Affected Areas

Is the property in a Radon Affected Area as defined by the Health Protection Agency (HPA) and if so what percentage of homes are above the Action Level? The property is not in a Radon Affected Area, as less than 1% of properties are above the Action Level.

* This indicates an automatically generated 50m buffer and site.

9.2.2 Radon Protection

Is the property in an area where Radon Protection are required for new properties or extensions to existing
ones as described in publication BR211 by the Building Research Establishment? No radon protective measures are necessary.

10. Mining

10.1 Coal Mining

Are there any coal mining areas within 75m of the study site? No

Database searched and no data found.

10.2 Non-Coal Mining

Are there any Non-Coal Mining areas within 50m of the study site boundary? No

Database searched and no data found.

10.3 Brine Affected Areas

Are there any brine affected areas within 75m of the study site? No
Guidance: No Guidance Required.

This report has been prepared in accordance with the Groundsure Ltd standard Terms and Conditions of business for work of this nature.

Standard Terms and Conditions

1 Definitions

I**n these terms and conditions unless the context otherwise requires:**

"Beneficiary" means the person or entity for whose benefit the Client has obtained the Services.

"Client" means the party or parties entering into a Contract with Groundsure.

"Commercial" means any building or property which is not Residential.

"Confidential Information" means the contents of this Contract and all information received from the Client as a result of, or in connection with, this Contract other than

(i) information which the Client can prove was rightfully in its possession prior to disclosure by Groundsure and

(ii) any information which is in the public domain (other than by virtue of a breach of this Contract).

"Support Services" means Support Services provided by Groundsure including, without limitation, interpreting third party and in-house environmental data, providing environmental support advice, undertaking environmental audits and assessments, Site investigation, Site monitoring and related items.

"Contract" means the contract between Groundsure and the Client for the provision of the Services, and which shall incorporate these terms and conditions, the Order, and the relevant User Guide.

"Third Party Data Provider" means any third party providing Third Party Content to Groundsure.

"Data Reports" means reports comprising factual data with no accompanying interpretation.

"Fees" has the meaning set out in clause 5.1.

"Groundsure" means Groundsure Limited, a company registered in England and Wales under number 03421028.

"Groundsure Materials" means all materials prepared by Groundsure and provided as part of the Services, including but not limited to Third Party Content, Data Reports, Mapping, and Risk Screening Reports.

"Intellectual Property" means any patent, copyright, design rights, trade or service mark, moral rights, data protection rights, know-how or trade mark in each case whether registered or not and including applications for the same or any other rights of a similar nature anywhere in the world.

"Mapping" means a map, map data or a combination of historical maps of various ages, time periods and scales.

"Order" means an electronic, written or other order form submitted by the Client requesting Services from Groundsure in respect of a specified Site.

"Ordnance Survey" means the Secretary of State for Business, Innovation and Skills, acting through Ordnance Survey, Adanac Drive, Southampton, SO16 0AS, UK.

"Order Website" means the online platform through which Orders may be placed by the Client and accepted by Groundsure.

"Report" means a Risk Screening Report or Data Report for Commercial or Residential property.

"Residential" means any building or property used as or intended to be used as a single dwelling.

"Risk Screening Report" means a risk screening report comprising factual data with an accompanying interpretation by Groundsure.

"Services" means any Report, Mapping and/or Support Services which Groundsure has agreed to provide by accepting an Order pursuant to clause 2.6.

"Site" means the area of land in respect of which the Client has requested Groundsure to provide the Services.

"Third Party Content" means data, database information or other information which is provided to Groundsure by a Third Party Data Provider.

"User Guide" means the user guide, as amended from time to time, available upon request from Groundsure and on the website (www.Groundsure.com) and forming part of this Contract.

2 Scope of Services, terms and conditions, requests for insurance and quotations

2.1 Groundsure agrees to provide the Services in accordance with the Contract.

2.2 Groundsure shall exercise reasonable skill and care in the provision of the Services.

2.3 Subject to clause 7.3 the Client acknowledges that it has not relied on any statement or representation made by or on behalf of Groundsure which is not set out and expressly agreed in writing in the Contract and all such statements and representations are hereby excluded to the fullest extent permitted by law.

2.4 The Client acknowledges that terms and conditions appearing on a Client's order form, printed stationery or other communication, or any terms or conditions implied by custom, practice or course of dealing shall be of no effect, and that this Contract shall prevail over all others in relation to the Order.

2.5 If the Client or Beneficiary requests insurance in conjunction with or as a result of the Services, Groundsure shall use reasonable endeavours to recommend such insurance, but makes no warranty that such insurance shall be available from insurers or that it will be offered on reasonable terms. Any insurance purchased by the Client or Beneficiary shall be subject solely to the terms of the policy issued by insurers and Groundsure will have no liability therefor. In addition you acknowledge and agree that Groundsure does not act as an agent or broker for any insurance providers. The Client should take (and ensure that the Beneficiary takes) independent advice to ensure that the insurance policy requested or offered is suitable for its requirements.

2.6 Groundsure's quotations or proposals are valid for a period of 30 days only unless an alternative period of time is explicitly stipulated by Groundsure. Groundsure reserves the right to withdraw any quotation or proposal at any time before an Order is accepted by Groundsure. Groundsure's acceptance of an Order shall be binding only when made in writing and signed by Groundsure's authorised representative or when accepted through the Order Website.

3 The Client's obligations

3.1The Client shall comply with the terms of this Contract and

(i) procure that the Beneficiary or any third party relying on the Services complies with and acts as if it is bound by the Contract and

(ii) be liable to Groundsure for the acts and omissions of the Beneficiary or any third party relying on the Services as if such acts and omissions were those of the Client.

3.2 The Client shall be solely responsible for ensuring that the Services are appropriate and suitable for its and/or the Beneficiary's needs.

3.3 The Client shall supply to Groundsure as soon as practicable and without charge all requisite information (and the Client warrants that such information is accurate, complete and appropriate), including without limitation any environmental information relating to the Site and shall give such assistance as Groundsure shall reasonably require in the provision of the Services including, without limitation, access to the Site, facilities and equipment.

3.4 Where the Client's approval or decision is required to enable Groundsure to carry out work in order to provide the Services, such approval or decision shall be given or procured in reasonable time and so as not to delay or disrupt the performance of the Services.

3.5 Save as expressly permitted by this Contract the Client shall not, and shall procure that the Beneficiary shall not, re-sell, alter, add to, or amend the Groundsure Materials, or use the Groundsure Materials in a manner for which they were not intended. The Client may make the Groundsure Materials available to a third party who is considering acquiring some or all of, or providing funding in relation to, the Site, but such third party cannot rely on the same unless expressly permitted under clause 4.

3.6 The Client is responsible for maintaining the confidentiality of its user name and password if using the Order Website and the Client acknowledges that Groundsure accepts no liability of any kind for any loss or damage suffered by the Client as a consequence of using the Order Website.

4 Reliance

4.1The Client acknowledges that the Services provided by Groundsure consist of the presentation and analysis of Third Party Content and other content and that information obtained from a Third Party Data Provider cannot be guaranteed or warranted by Groundsure to be reliable.

4.2 In respect of Data Reports, Mapping and Risk Screening Reports, the following classes of person and no other are entitled to rely on their contents;

(i) the Beneficiary,

(ii) the Beneficiary's professional advisers, (iii) any person providing funding to the Beneficiary in relation to the Site (whether directly or as part of a lending syndicate),

(iv) the first purchaser or first tenant of the Site, and

(v) the professional advisers and lenders of the first purchaser or tenant of the Site.

4.3 In respect of Support Services, only the Client, Beneficiary and parties expressly named in a Report and no other parties are entitled to rely on its contents.

4.4 Save as set out in clauses 4.2 and 4.3 and unless otherwise expressly agreed in writing, no other person or entity of any kind is entitled to rely on any Services or Report issued or provided by Groundsure. Any party considering such Reports and Services does so at their own risk.

5 Fees and Disbursements

5.1Groundsure shall charge and the Client shall pay fees at the rate and

frequency specified in the written proposal, Order Website or Order acknowledgement form, plus (in the case of Support Services) all proper disbursements incurred by Groundsure. The Client shall in addition pay all value added tax or other tax payable on such fees and disbursements in relation to the provision of the Services (together "Fees").

5.2 The Client shall pay all outstanding Fees to Groundsure in full without deduction, counterclaim or set off within 30 days of the date of Groundsure's invoice or such other period as may be agreed in writing between Groundsure and the Client ("Payment Date"). Interest on late payments will accrue on a daily basis from the Payment Date until the date of payment (whether before or after judgment) at the rate of 8% per annum.

5.3 The Client shall be deemed to have agreed the amount of any invoice unless an objection is made in writing within 28 days of the date of the invoice. As soon as reasonably practicable after being notified of an objection, without prejudice to clause 5.2 a member of Groundsure's management team will contact the Client and the parties shall then use all reasonable endeavours to resolve the dispute within 15 days.

6 Intellectual Property and Confidentiality

6.1 Subject to

(i) full payment of all relevant Fees and

(ii) compliance with this Contract, the Client is granted (and is permitted to sub-licence to the Beneficiary) a royalty-free, worldwide, non-assignable and (save to the extent set out in this Contract) non-transferable licence to make use of the Groundsure Materials.

6.2 All Intellectual Property in the Groundsure Materials are and shall remain owned by Groundsure or Groundsure's licensors (including without limitation the Third Party Data Providers) the Client acknowledges, and shall procure acknowledgement by the Beneficiary of, such ownership. Nothing in this Contract purports to transfer or assign any rights to the Client or the Beneficiary in respect of such Intellectual Property.

6.3 Third Party Data Providers may enforce any breach of clauses 6.1 and 6.2 against the Client or Beneficiary.

6.4 The Client shall, and shall procure that any recipients of the Groundsure Materials shall:

(i) not remove, suppress or modify any trade mark, copyright or other proprietary marking belonging to Groundsure or any third party from the Services;

(ii) use the information obtained as part of the Services in respect of the subject Site only, and shall not store or reuse any information obtained as part of the Services provided in respect of adjacent or nearby sites;

(iii) not create any product or report which is derived directly or indirectly from the Services (save that those acting in a professional capacity to the Beneficiary may provide advice based upon the Services);

(iv) not combine the Services with or incorporate such Services into any other information data or service;

(v) not reformat or otherwise change (whether by modification, addition or enhancement), the Services (save that those acting for the Beneficiary in a professional capacity shall not be in breach of this clause 6.4(v) where such reformatting is in the normal course of providing advice based upon the Services);

(vi) where a Report and/or Mapping contains material belonging to Ordnance Survey, acknowledge and agree that such content is protected by Crown Copyright and shall not use such content for any purpose outside of receiving the Services; and

(vii) not copy in whole or in part by any means any map prints or run-on copies containing content belonging to Ordnance Survey (other than that contained within Ordnance Survey's OS Street Map) without first being in possession of a valid Paper Map Copying Licence from Ordnance Survey,

6.5 Notwithstanding clause 6.4, the Client may make reasonable use of the Groundsure Materials in order to advise the Beneficiary in a professional capacity. However, Groundsure shall have no liability in respect of any advice, opinion or report given or provided to Beneficiaries by the Client.

6.6 The Client shall procure that any person to whom the Services are made available shall notify Groundsure of any request or requirement to disclose, publish or disseminate any information contained in the Services in accordance with the Freedom of Information Act 2000, the Environmental Information Regulations 2004 or any associated legislation or regulations in force from time to time.

7.Liability: Particular Attention Should Be Paid To This Clause

7.1 This Clause 7 sets out the entire liability of Groundsure, including any liability for the acts or omissions of its employees, agents, consultants, subcontractors and Third Party Content, in respect of:

(i) any breach of contract, including any deliberate breach of the Contract by Groundsure or its employees, agents or subcontractors;

(ii) any use made of the Reports, Services, Materials or any part of them; and

(iii) any representation, statement or tortious act or omission (including negligence) arising under or in connection with the Contract.

7.2 All warranties, conditions and other terms implied by statute or common law are, to the fullest extent permitted by law, excluded from the Contract.

7.3 Nothing in the Contract limits or excludes the liability of the Supplier for death or personal injury resulting from negligence, or for any damage or liability incurred by the Client or Beneficiary as a result of fraud or fraudulent misrepresentation.

7.4 Groundsure shall not be liable for

(i) loss of profits;

(ii) loss of business;

(iii) depletion of goodwill and/or similar losses;

(iv) loss of anticipated savings;

(v) loss of goods;

(vi) loss of contract;

(vii) loss of use;

(viii) loss or corruption of data or information;

(ix) business interruption;

(x) any kind of special, indirect, consequential or pure economic loss, costs, damages, charges or expenses;

(xi) loss or damage that arise as a result of the use of all or part of the Groundsure Materials in breach of the Contract;

(xii) loss or damage arising as a result of any error, omission or inaccuracy in any part of the Groundsure Materials where such error, omission or inaccuracy is caused by any Third Party Content or any reasonable interpretation of Third Party Content;

(xiii) loss or damage to a computer, software, modem, telephone or other property; and

(xiv) loss or damage caused by a delay or loss of use of Groundsure's internet ordering service.

7.5 Groundsure's total liability in relation to or under the Contract shall be limited to £10 million for any claim or claims.

7.6 Groundsure shall procure that the Beneficiary shall be bound by limitations and exclusions of liability in favour of Groundsure which accord with those detailed in clauses 7.4 and 7.5 (subject to clause 7.3) in respect of all claims which the Beneficiary may bring against Groundsure in relation to the Services or other matters arising pursuant to the Contract.

8 Groundsure's right to suspend or terminate

8.1 If Groundsure reasonably believes that the Client or Beneficiary has not provided the information or assistance required to enable the proper provision of the Services, Groundsure shall be entitled to suspend all further performance of the Services until such time as any such deficiency has been made good.

8.2 Groundsure shall be entitled to terminate the Contract immediately on written notice in the event that:

(i) the Client fails to pay any sum due to Groundsure within 30 days of the Payment Date; or

(ii) the Client (being an individual) has a bankruptcy order made against him or (being a company) shall enter into liquidation whether compulsory or voluntary or have an administration order made against it or if a receiver shall be appointed over the whole or any part of its property assets or undertaking or if the Client is struck off the Register of Companies or dissolved; or

(iii) the Client being a company is unable to pay its debts within the meaning of Section 123 of the Insolvency Act 1986 or being an individual appears unable to pay his debts within the meaning of Section 268 of the Insolvency Act 1986 or if the Client shall enter into a composition or arrangement with the Client's creditors or shall suffer distress or execution to be levied on his goods; or

(iv) the Client or the Beneficiary breaches any term of the Contract (including, but not limited to, the obligations in clause 4) which is incapable of remedy or if remediable, is not remedied within five days of notice of the breach.

9. Client's Right to Terminate and Suspend

9.1 Subject to clause 10.1, the Client may at any time upon written notice terminate or suspend the provision of all or any of the Services.

9.2 In any event, where the Client is a consumer (and not a business) he/she hereby expressly acknowledges and agrees that:

(i) the supply of Services under this Contract (and therefore the performance of this Contract) commences immediately upon Groundsure's acceptance of the Order; and

(ii) the Reports and/or Mapping provided under this Contract are

(a) supplied to the Client's specification(s) and in any event

(b) by their nature cannot be returned.

10 Consequences of Withdrawal, Termination or Suspension

10.1 Upon termination of the Contract:

(i) Groundsure shall take steps to bring to an end the Services in an orderly manner, vacate any Site with all reasonable speed and shall deliver to the Client and/or Beneficiary any property of the Client and/or Beneficiary in Groundsure's possession or control; and

(ii) the Client shall pay to Groundsure all and any Fees payable in respect of the performance of the Services up to the date of termination or suspension. In respect of any Support Services provided, the Client shall also pay Groundsure any additional costs incurred in relation to the termination or suspension of the Contract.

11 Anti-Bribery

11.1 The Client warrants that it shall:

(i) comply with all applicable laws, statutes and regulations relating to anti-bribery and anti-corruption including but not limited to the Bribery Act 2010;

(ii) comply with such of Groundsure's anti-bribery and anti-corruption policies as are notified to the Client from time to time; and

(iii) promptly report to Groundsure any request or demand for any undue financial or other advantage of any kind received by or on behalf of the Client in connection with the performance of this Contract.

11.2 Breach of this Clause 11 shall be deemed a material breach of this Contract.

12 General

12.1 The Mapping contained in the Services is protected by Crown copyright and must not be used for any purpose other than as part of the Services or as specifically provided in the Contract.

12.2 The Client shall be permitted to make one copy only of each Report or Mapping Order. Thereafter the Client shall be entitled to make unlimited copies of the Report or Mapping Order only in accordance with an Ordnance Survey paper map copy license available through Groundsure.

12.3 Groundsure reserves the right to amend or vary this Contract. No amendment or variation to this Contract shall be valid unless signed by an authorised representative of Groundsure.

12.4 No failure on the part of Groundsure to exercise, and no delay in exercising, any right, power or provision under this Contract shall operate as a waiver thereof.

12.5 Save as expressly provided in this Contract, no person other than the persons set out therein shall have any right under the Contract (Rights of Third Parties) Act 1999 to enforce any terms of the Contract.

12.6 The Secretary of State for Business, Innovation and Skills ("BIS") or BIS' successor body, as the case may be, acting through Ordnance Survey may enforce a breach of clause 6.4(vi) and clause 6.4(vii) of these terms and conditions against the Client in accordance with the provisions of the Contracts (Rights of Third Parties) Act 1999.

12.7 Groundsure shall not be liable to the Client if the provision of the Services is delayed or prevented by one or more of the following circumstances:

(i) the Client or Beneficiary's failure to provide facilities, access or information;

(ii) fire, storm, flood, tempest or epidemic;

(iii) Acts of God or the public enemy;

(iv) riot, civil commotion or war;

(v) strikes, labour disputes or industrial action;

(vi) acts or regulations of any governmental or other agency;

(vii) suspension or delay of services at public registries by Third Party Data Providers;

(viii) changes in law; or

(ix) any other reason beyond Groundsure's reasonable control.

In the event that Groundsure is prevented from performing the Services (or any part thereof) in accordance with this clause 12.6 for a period of not less than 30 days then Groundsure shall be entitled to terminate this Contract immediately on written notice to the Client.

12.8 Any notice provided shall be in writing and shall be deemed to be properly given if delivered by hand or sent by first class post, facsimile or by email to the address, facsimile number or email address of the relevant party as may have been notified by each party to the other for such purpose or in the absence of such notification the last known address.

12.9 Such notice shall be deemed to have been received on the day of delivery if delivered by hand, facsimile or email (save to the extent such day is not a working day where it shall be deemed to have been delivered on the next working day) and on the second working day after the day of posting if sent by first class post.

12.10 The Contract constitutes the entire agreement between the parties and shall supersede all previous arrangements between the parties relating to the subject matter hereof.

12.11 Each of the provisions of the Contract is severable and distinct from the others and if one or more provisions is or should become invalid, illegal or unenforceable, the validity and enforceability of the remaining provisions shall not in any way be tainted or impaired.

12.12 This Contract shall be governed by and construed in accordance with English law and any proceedings arising out of or connected with this Contract shall be subject to the exclusive jurisdiction of the English courts.

12.13 Groundsure is an executive member of the Council of Property Search Organisation (CoPSO) and has signed up to the Search Code administered by the Property Codes Compliance Board (PCCB). All Risk Screening Reports shall be supplied in accordance with the provisions of the Search Code.

12.14 If the Client or Beneficiary has a complaint about the Services, written notice should be given to the Compliance Officer at Groundsure who will respond in a timely manner. In the event you are not satisfied with Groundsure's complaints handling process or you are unable to resolve the complaint, at your discretion you may refer the complaint to The Property Ombudsman Scheme at the following URL/email: website www.tpos.co.uk or email: admin@tpos.co.uk

12.15 The Client agrees that it shall, and shall procure that each Beneficiary shall, treat in confidence all Confidential Information and shall not, and shall procure that each Beneficiary shall not (i) disclose any Confidential Information to any third party other than in accordance with the terms of this Contract; and (ii) use Confidential Information for a purpose other than the exercise of its rights and obligations under this Contract. Subject to clause 6.6, nothing shall prevent the Client or any Beneficiary from disclosing Confidential Information to the extent required by law. **© Groundsure Limited June 2013**

Overview of Findings

The Groundsure Geoinsight provides high quality geo-environmental information that allows geo-environmental professionals and their clients to make informed decisions and be forewarned of potential ground instability problems that may affect the ground investigation, foundation design and possibly remediation options that could lead to possible additional costs.

The report is based on the BGS 1:50,000 Digital Geological Map of Great Britain, BGS Geosure data; BRITPITS database; Shallow Mining data and Borehole Records, Coal Authority data including brine extraction areas, PBA non-coal mining and natural cavities database, Johnson Poole and Bloomer mining data and Groundsure's unique database including historical surface ground and underground workings.

For further details on each dataset, please refer to each individual section in the report as listed. Where the database has been searched a numerical result will be recorded. Where the database has not been searched '-' will be recorded.

Section 1:Geology		
1.1 Artificial Ground	1.1.1 Is there any Artificial Ground/ Made Ground present beneath the study site?	No
	1.1.2 Are there any records relating to permeability of artificial ground within the study site* boundary?	No
1.2 Superficial Geology and Landslips	1.2.1 Is there any Superficial Ground/Drift Geology present beneath the study site?	No
	1.2.2 Are there any records relating to permeability of superficial geology within the study site boundary?	No
	1.2.3 Are there any records of landslip within 500m of the study site boundary?	No
	1.2.4 Are there any records relating to permeability of landslips within the study site boundary?	No
1.3 Bedrock, Solid Geology & Faults	1.3.1 For records of Bedrock and Solid Geology beneath the study site* see the detailed findings section.	
	1.3.2 Are there any records relating to permeability of bedrock within the study site boundary?	Yes
	1.3.3 Are there any records of faults within 500m of the study site boundary?	No
1.4 Radon data	1.4.1 Is the property in a Radon Affected Area as defined by the Health Protection Agency (HPA) and if so what percentage of homes are above the Action Level?	The property is not in a Radon Affected Area, as less than 1% of properties are above the Action Level
	1.4.2 Is the property in an area where Radon Protection Measures are required for new properties or extensions to existing ones as described in publication BR211 by the Building Research Establishment?	No radon protective measures are necessary

Section 2:Ground Workings	On-site	0-50m	51-250	251-500	501-1000
2.1 Historical Surface Ground Working Features from Small Scale Mapping	0	0	8	Not Searched	Not Searched
2.2 Historical Underground Workings from Small Scale Mapping	0	0	0	0	17
2.3 Current Ground Workings	0	0	0	0	0

Section 3: Mining, Extraction & Natural Cavities	On-site	0-50m	51-250	251-500	501-1000
3.1 Historical Mining	0	0	0	0	3
3.2 Coal Mining	0	0	0	0	0
3.3 Johnson Poole and Bloomer Mining Area	0	0	0	0	0
3.4 Non-Coal Mining	0	0	0	0	0
3.5 Non-Coal Mining Cavities	0	0	0	0	0
3.6 Natural Cavities	0	0	0	0	0
3.7 Brine Extraction	0	0	0	0	0
3.8 Gypsum Extraction	0	0	0	0	0
3.9 Tin Mining	0	0	0	0	0
3.10 Clay Mining	0	0	0	0	0

Section 4: Natural Ground Subsidence	On-site
4.1 Shrink Swell Clay	Moderate
4.2 Landslides	Very Low
4.3 Ground Dissolution of Soluble Rocks	Negligible
4.4 Compressible Deposits	Negligible
4.5 Collapsible Deposits	Very Low
4.6 Running Sand	Very Low

Section 5: Borehole Records	On-site	0-50m	51-250
5 BGS Recorded Boreholes	1	0	15

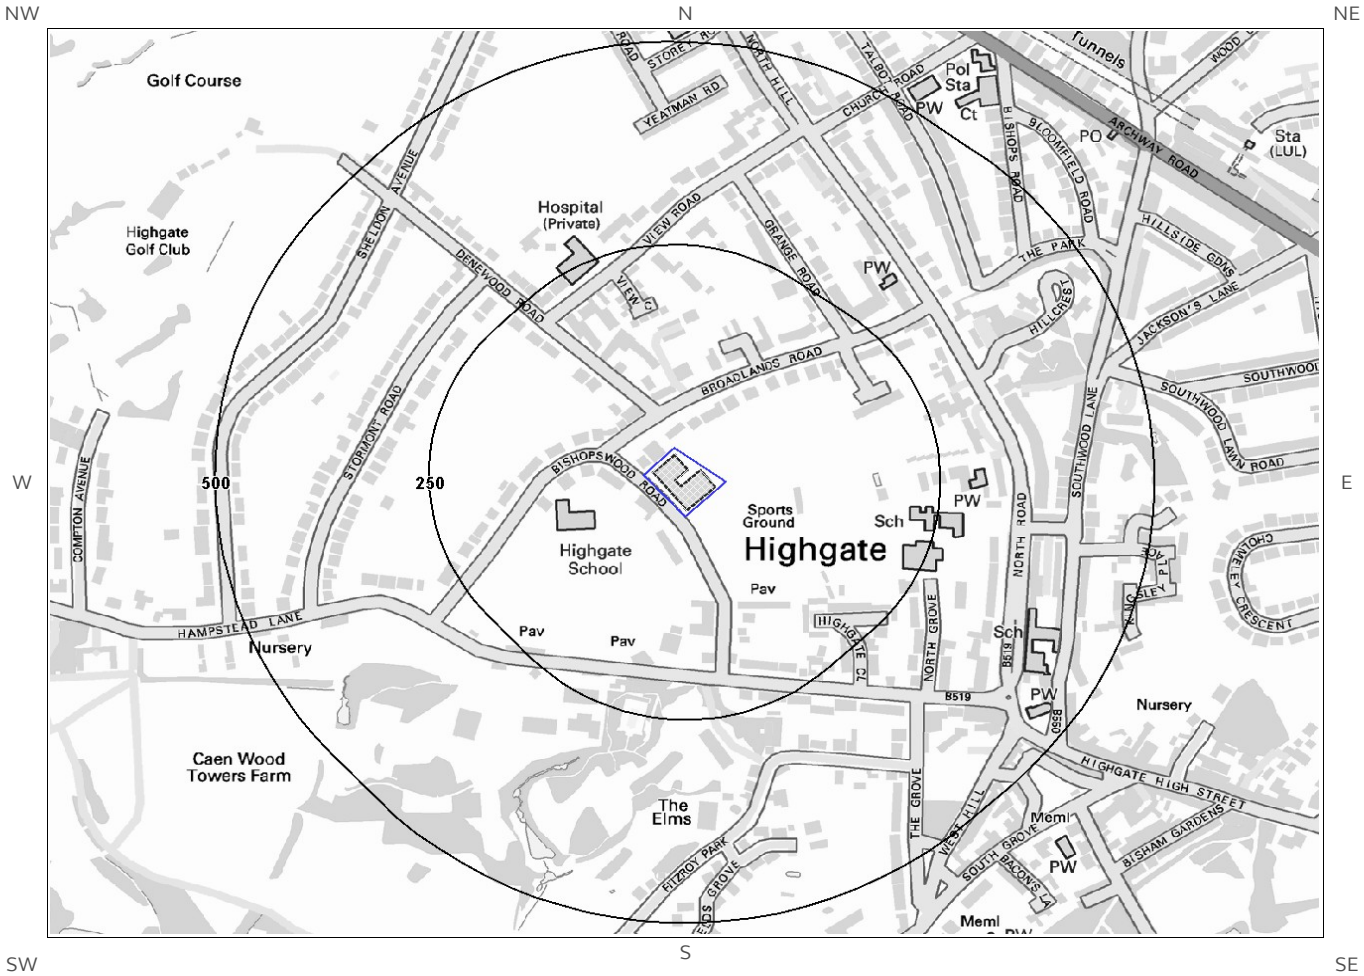
1.1 Artificial Ground

1.1.1Artificial/ Made Ground

The following geological information represented on the mapping is derived from 1:50,000 scale BGS Geological mapping, Sheet No:256

Are there any records of Artificial/Made Ground within 500m of the study site boundary? No



Database searched and no data found.

1.1.2 Permeability of Artificial Ground

Are there any records relating to permeability of artificial ground within the study site boundary? No

Database searched and no data found.

1.2 Superficial Deposits and Landslips Map

1.2 Superficial Deposits and Landslips

1.2.1 Superficial Deposits/ Drift Geology

Are there any records of Superficial Deposits/ Drift Geology within 500m of the study site boundary? No

Database searched and no data found.

1.2.2 Permeability of Superficial Ground

Are there any records relating to permeability of superficial ground within the study site boundary? No

Database searched and no data found.

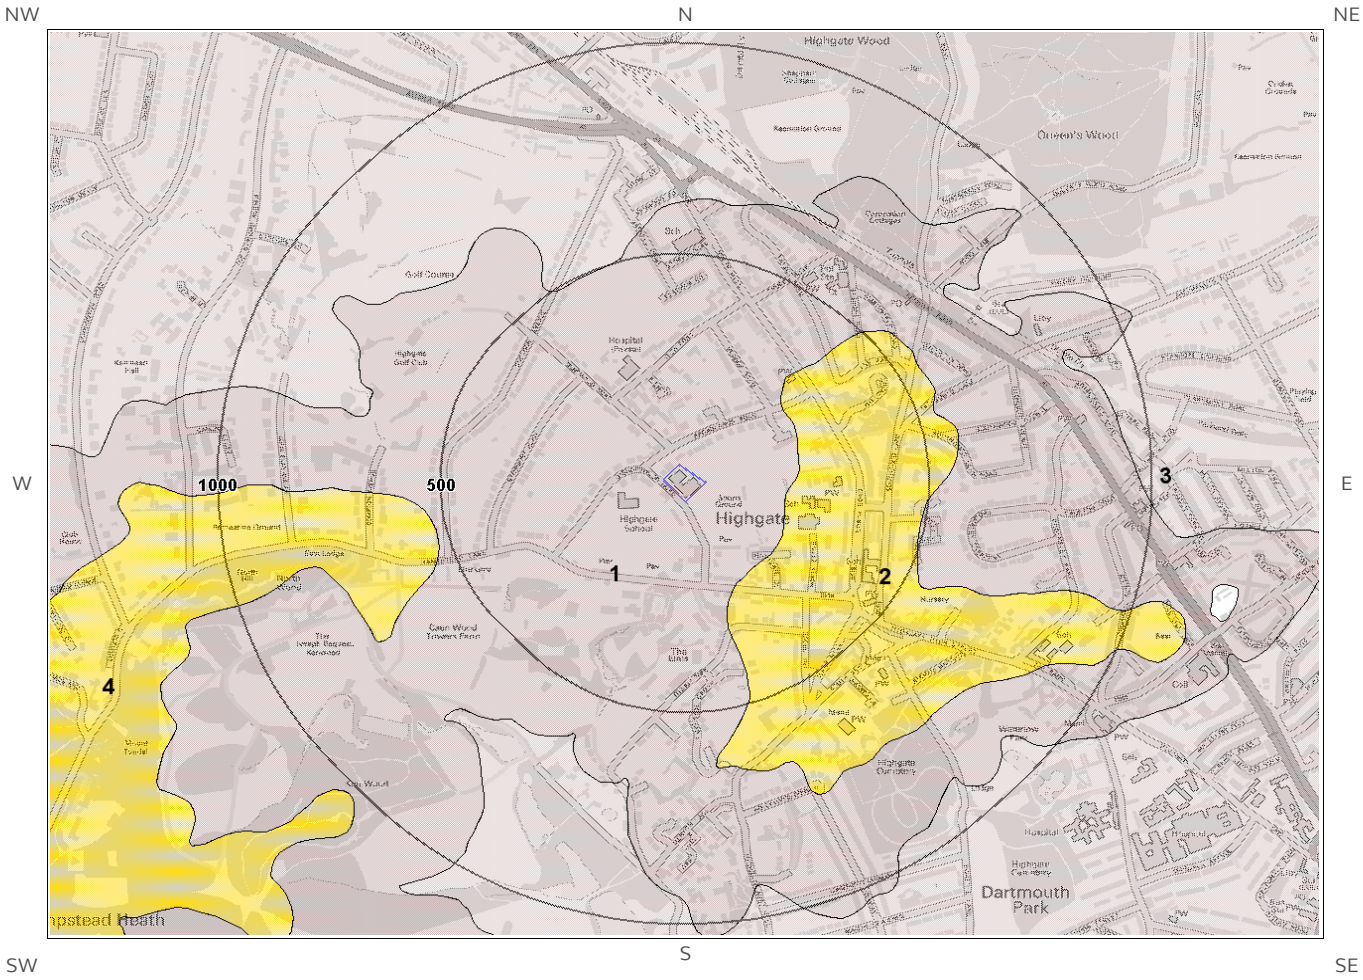
1.2.3 Landslip

Are there any records of Landslip within 500m of the study site boundary? No

Database searched and no data found.

This Geology shows the main components as discrete layers, these are: Artificial / Made Ground, Superficial / Drift Geology and Landslips. These are all displayed with the BGS Lexicon code for the rock unit and BGS sheet number. Not all of the main geological components have nationwide coverage.

1.2.4 Landslip Permeability



Are there any records relating to permeability of landslips within the study site* boundary? No

Database searched and no data found.

1.3 Bedrock, Solid Geology & Faults

The following geological information represented on the mapping is derived from 1:50,000 scale BGS Geological mapping, Sheet No:256

1.3.1 Bedrock/ Solid Geology

Records of Bedrock/ Solid Geology within 500m of the study site boundary:

ID	Distance (m)	Direction	LEX Code	Description	Rock Age
1	0.0	On Site	CLGB-CLSISA	Claygate Member - Clay, Silt And Sand	No Details
2	179.0	E	BGS-SANDU	Bagshot Formation - Sand	No Details
3	494.0	NW	LC-CLSISA	London Clay Formation - Clay, Silt And Sand	No Details

1.3.2 Permeability of Bedrock Ground

Are there any records relating to permeability of bedrock ground within the study site* boundary? Yes

Distance (m)	Direction	Flow Type	Maximum Permeability	Minimum Permeability
0.0	On Site	Mixed	High	Very Low

1.3.3 Faults

Are there any records of Faults within 500m of the study site boundary? No

Database searched and no data found.

The geology map for the site and surrounding area are extracted from the BGS Digital Geological Map of Great Britain at 1:50,000 scale.

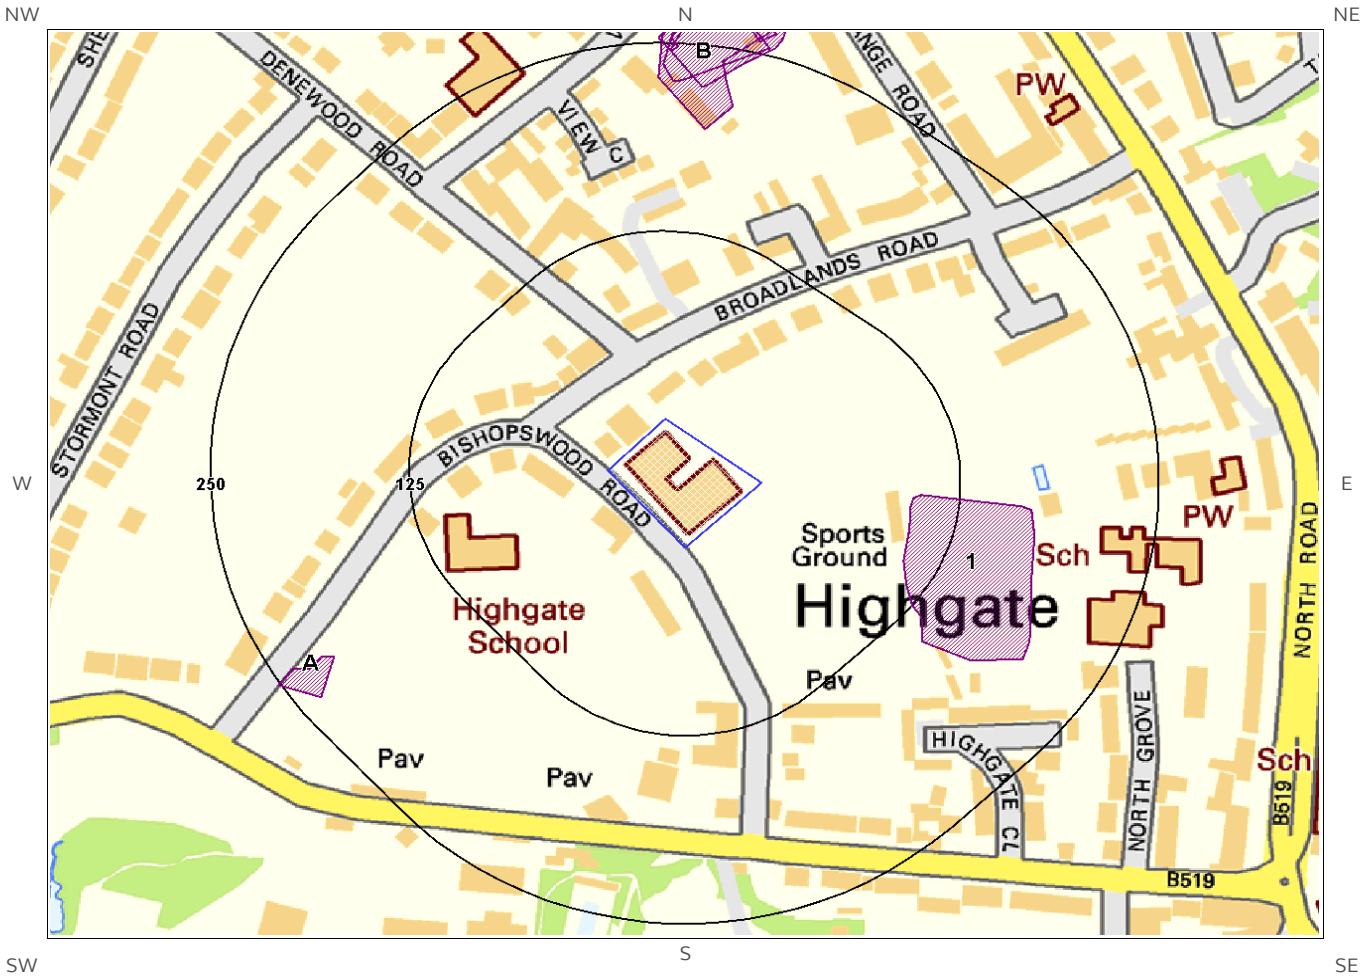
This Geology shows the main components as discrete layers, these are: Bedrock/ Solid Geology and linear features such as Faults. These are all displayed with the BGS Lexicon code for the rock unit and BGS sheet number. Not all of the main geological components have nationwide coverage.

* This includes an automatically generated 50m buffer zone around the site

1.4 Radon Data

1.4.1 Radon Affected Areas

Is the property in a Radon Affected Area as defined by the Health Protection Agency (HPA) and if so what percentage of homes are above the Action Level? The property is not in a Radon Affected Area, as less than 1% of properties are above the Action Level



---

1.4.2 Radon Protection

Is the property in an area where Radon Protection are required for new properties or extensions to existing ones as described in publication BR211 by the Building Research Establishment? No radon protective measures are necessary

Current Ground Workings

2 Ground Workings

2.1 Historical Surface Ground Working Features derived from Historical Mapping

This dataset is based on Groundsure's unique Historical Land Use Database derived from 1:10,560 and 1:10,000 scale historical mapping.

Are there any Historical Surface Ground Working Features within 250m of the study site boundary? Yes

The following Historical Surface Ground Working Features are provided by Groundsure:

ID	Distance (m)	Direction	NGR	Use	Date
1	95.0	E	528113 187686	Unspecified Ground Workings	1894
2B	194.0	N	527954 188042	Unspecified Ground Workings	1894
3A	212.0	SW	527696 187620	Pond	1869
4A	212.0	SW	527696 187620	Pond	1879
5A	212.0	SW	527696 187620	Pond	1879
6B	222.0	N	527962 188050	Unspecified Ground Workings	1958
7B	225.0	N	527954 188048	Unspecified Heap	1913
8	244.0	N	527935 188062	Unspecified Ground Workings	1940

2.2 Historical Underground Working Features derived from Historical Mapping

This data is derived from the Groundsure unique Historical Land Use Database. It contains data derived from 1:10,000 and 1:10,560 historical Ordnance Survey Mapping and includes some natural topographical features (Shake Holes for example) as well as manmade features that may have implications for ground stability. Underground and mining features have been identified from surface features such as shafts. The distance that these extend underground is not shown.

Are there any Historical Underground Working Features within 1000m of the study site boundary? Yes

The following Historical Underground Working Features are provided by Groundsure:

ID	Distance (m)	Direction	NGR	Use	Date
Not shown	654.0	NE	528402 188269	Tunnels	1995
Not shown	654.0	NE	528402 188269	Tunnels	1958

ID	Distance (m)	Direction	NGR	Use	Date

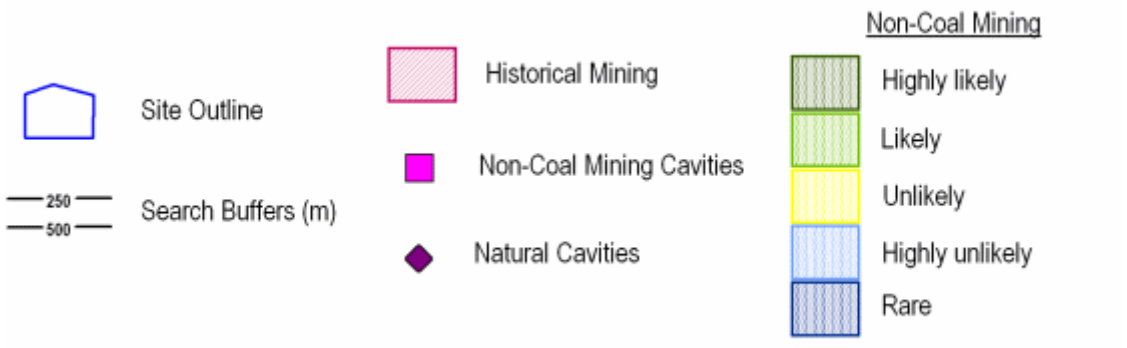
2.3 Current Ground Workings

This dataset is derived from the BGS BRITPITS database covering active; inactive mines; quarries; oil wells; gas wells and mineral wharves; and rail deposits throughout the British Isles.

Are there any BGS Current Ground Workings within 1000m of the study site boundary? No



Database searched and no data found.

3 Mining, Extraction & Natural Cavities Map

Mining, Extraction and Natural Cavities Legend

© Crown copyright and database rights 2016.
Ordnance Survey license 100035207.

3 Mining, Extraction & Natural Cavities

3.1 Historical Mining

This dataset is derived from Groundsure unique Historical Land-use Database that are indicative of mining or extraction activities.

Are there any Historical Mining areas within 1000m of the study site boundary? Yes

The following Historical Mining information is provided by Groundsure:

ID	Distance (m)	Direction	NGR	Details	Date
Not shown	850.0	NW	527315 188392	Unspecified Shaft	1965
Not shown	850.0	NW	527315 188392	Unspecified Shaft	1995
Not shown	850.0	NW	527315 188392	Unspecified Shaft	1974

3.2 Coal Mining

This dataset provides information as to whether the study site lies within a known coal mining affected area as defined by the coal authority.

Are there any Coal Mining areas within 1000m of the study site boundary? No

Database searched and no data found.

3.3 Johnson Poole and Bloomer

This dataset provides information as to whether the study site lies within an area where JPB hold information relating to mining.

Are there any JPB Mining areas within 1000m of the study site boundary? No

The following information provided by JPB is not represented on mapping: Database searched and no data found.

3.4 Non-Coal Mining

This dataset provides information as to whether the study site lies within an area which may have been subject to non-coal historic mining.

Are there any Non-Coal Mining areas within 1000m of the study site boundary? No

Database searched and no data found.

3.5 Non-Coal Mining Cavities

This dataset provides information from the Peter Brett Associates (PBA) mining cavities database (compiled for the national study entitled "Review of mining instability in Great Britain, 1990" PBA has also continued adding to this database) on mineral extraction by mining.

Are there any Non-Coal Mining cavities within 1000m of the study site boundary? No

Database searched and no data found.

3.6 Natural Cavities

This dataset provides information based on Peter Brett Associates natural cavities database.

Are there any Natural Cavities within 1000m of the study site boundary? No

Database searched and no data found.

3.7 Brine Extraction

This data provides information from the Coal Authority issued on behalf of the Cheshire Brine Subsidence Compensation Board.

Are there any Brine Extraction areas within 1000m of the study site boundary? No

Database searched and no data found.

3.8 Gypsum Extraction

This dataset provides information on Gypsum extraction from British Gypsum records.

Are there any Gypsum Extraction areas within 1000m of the study site boundary? No

Database searched and no data found.

3.9 Tin Mining

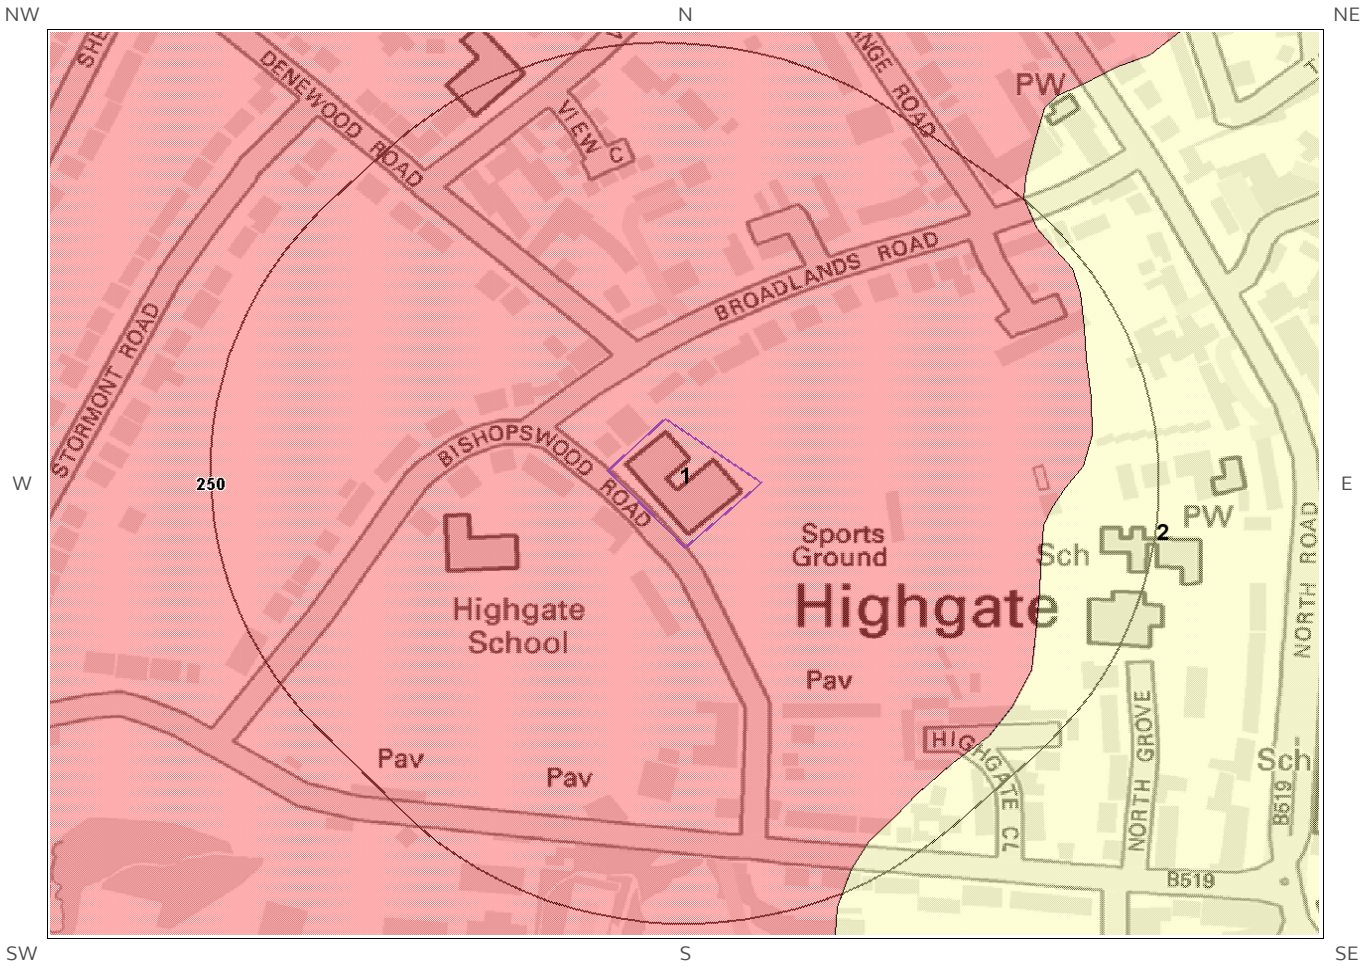
This dataset provides information on tin mining areas and is derived from tin mining records. This search is based upon postcode information to a sector level.

Are there any Tin Mining areas within 1000m of the study site boundary? No

Database searched and no data found.

3.10 Clay Mining

This dataset provides information on Kaolin and Ball Clay mining from relevant mining records.



Are there any Clay Mining areas within 1000m of the study site boundary? No

Database searched and no data found.

4 Natural Ground Subsidence

The National Ground Subsidence rating is obtained through the 6 natural ground stability hazard datasets, which are supplied by the British Geological Survey (BGS).

The following GeoSure data represented on the mapping is derived from the BGS Digital Geological map of Great Britain at 1:50,000 scale.

What is the maximum hazard rating of natural subsidence within the study site*[*] boundary? Moderate

4.1 Shrink-Swell Clays

The following Shrink Swell information provided by the British Geological Survey:

ID	Distance (m)	Direction	Hazard Rating	Details
1	0.0	On Site	Moderate	Ground conditions predominantly high plasticity. Do not plant or remove trees or shrubs near to buildings without expert advice about their effect and management. For new build, consideration should be given to advice published by the National House Building Council (NHBC) and the Building Research Establishment (BRE). There is a probable increase in construction cost to reduce potential shrink-swell problems. For existing property, there is a probable increase in insurance risk during droughts or where vegetation with high moisture demands is present.

4.2 Landslides

The following Landslides information provided by the British Geological Survey:

ID	Distance (m)	Direction	Hazard Rating	Details
1	0.0	On Site	Very Low	Slope instability problems are unlikely to be present. No special actions required to avoid problems due to landslides. No special ground investigation required, and increased construction costs or increased financial risks are unlikely due to potential problems with landslides.

4.3 Ground Dissolution of Soluble Rocks

The following Ground Dissolution information provided by the British Geological Survey:

ID	Distance (m)	Direction	Hazard Rating	Details
1	0.0	On Site	Negligible	Soluble rocks are present, but unlikely to cause problems except under exceptional conditions. No special actions required to avoid problems due to soluble rocks. No special ground investigation required, and increased construction costs or increased financial risks are unlikely due to potential problems with soluble rocks.

* This includes an automatically generated 50m buffer zone around the site

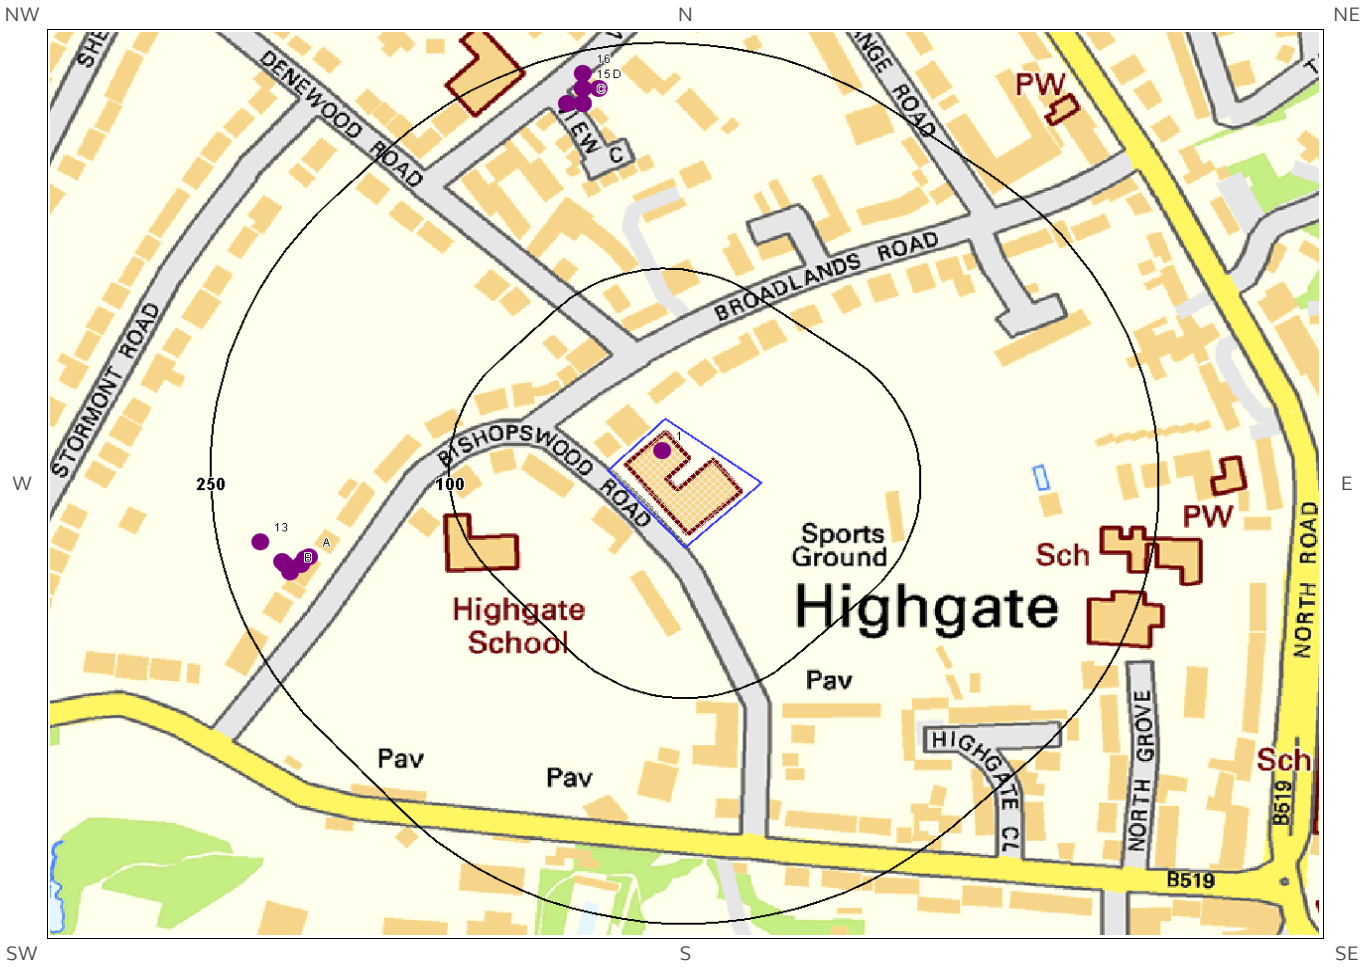
4.4 Compressible Deposits

The following Compressible Deposits information provided by the British Geological Survey:

ID	Distance (m)	Direction	Hazard Rating	Details
1	0.0	On Site	Negligible	No indicators for compressible ground identified. No special actions required to avoid problems due to compressible ground. No special ground investigation required, and increased construction costs or increased financial risks are unlikely due to potential problems with compressible ground.

4.5 Collapsible Deposits

The following Collapsible Rocks information provided by the British Geological Survey:



ID	Distance (m)	Direction	Hazard Rating	Details
1	0.0	On Site	Very Low	Deposits with potential to collapse when loaded and saturated are unlikely to be present. No special ground investigation required or increased construction costs or increased financial risk due to potential problems with collapsible deposits.

4.6 Running Sands

The following Running Sands information provided by the British Geological Survey:

ID	Distance (m)	Direction	Hazard Rating	Details
1	0.0	On Site	Very Low	Very low potential for running sand problems if water table rises or if sandy strata are exposed to water. No special actions required to avoid problems due to running sand. No special ground investigation required, and increased construction costs or increased financial risks are unlikely due to potential problems with running sand.

7 Railways and Tunnels

7.1 Tunnels

This data is derived from OpenStreetMap and provides information on the possible locations of underground railway systems in the UK - the London Underground, the Tyne & Wear Metro and the Glasgow Subway.

Have any underground railway lines been identified within the study site boundary? No

Have any underground railway lines been identified within 250m of the study site boundary? No

Database searched and no data found.

Any records that have been identified are represented on the Railways and Tunnels Map.

This data is derived from Ordnance Survey mapping and provides information on the possible locations of railway tunnels forming part of the UK overground railway network.

Have any other railway tunnels been identified within the site boundary? No

Have any other railway tunnels been identified within 250m of the site boundary? No

Database searched and no data found.

Any records that have been identified are represented on the Railways and Tunnels Map.

7.2 Historical Railway and Tunnel Features

This data is derived from Groundsure's unique Historical Land-use Database and contains features relating to tunnels, railway tracks or associated works that have been identified from historical Ordnance Survey mapping.

Have any historical railway or tunnel features been identified within the study site boundary? No

Have any historical railway or tunnel features been identified within 250m of the study site boundary? No

Database searched and no data found.

Any records that have been identified are represented on the Railways and Tunnels Map.

7.3 Historical Railways

This data is derived from OpenStreetMap and provides information on the possible alignments of abandoned or dismantled railway lines in proximity to the study site.

Have any historical railway lines been identified within the study site boundary?	No
Have any historical railway lines been identified within 250m of the study site boundary?	No

Database searched and no data found.

Note: multiple sections of the same track may be listed in the detail above

Any records that have been identified are represented on the Railways and Tunnels Map.

7.4 Active Railways

These datasets are derived from Ordnance Survey mapping and OpenStreetMap and provide information on the possible locations of active railway lines in proximity to the study site.

Have any active railway lines been identified within the study site boundary?	No
Have any active railway lines been identified within 250m of the study site boundary?	No

Database searched and no data found.

Note: multiple sections of the same track may be listed in the detail above
Any records that have been identified are represented on the Railways and Tunnels Map.

7.5 Railway Projects

These datasets provide information on the location of large scale railway projects High Speed 2 and Crossrail 1 .

Is the study site within 5km of the route of the High Speed 2 rail project?	Yes
Is the study site within 500m of the route of the Crossrail 1 rail project?	No

*Further information on proximity to these routes, the project construction status and associated works can be obtained through the purchase of a **Groundsure HS2 and Crossrail 1 Report**.*

The route data has been digitised from publicly available maps by Groundsure. The route as provided relates to the Crossrail 1 project only, and does not include any details of the Crossrail 2 project, as final details of the route for Crossrail 2 are still under consultation.

Standard Terms and Conditions

1 Definitions

I**n these terms and conditions unless the context otherwise requires:**
"Beneficiary" means the person or entity for whose benefit the Client has obtained the Services.
"Client" means the party or parties entering into a Contract with Groundsure.
"Commercial" means any building or property which is not Residential.
"Confidential Information" means the contents of this Contract and all information received from the Client as a result of, or in connection with, this Contract other than
(i) information which the Client can prove was rightfully in its possession prior to disclosure by Groundsure and
(ii) any information which is in the public domain (other than by virtue of a breach of this Contract).
"Support Services" means Support Services provided by Groundsure including, without limitation, interpreting third party and in-house environmental data, providing environmental support advice, undertaking environmental audits and assessments, Site investigation, Site monitoring and related items.
"Contract" means the contract between Groundsure and the Client for the provision of the Services, and which shall incorporate these terms and conditions, the Order, and the relevant User Guide.
"Third Party Data Provider" means any third party providing Third Party Content to Groundsure.
"Data Reports" means reports comprising factual data with no accompanying interpretation.
"Fees" has the meaning set out in clause 5.1.
"Groundsure" means Groundsure Limited, a company registered in England and Wales under number 03421028.
"Groundsure Materials" means all materials prepared by Groundsure and provided as part of the Services, including but not limited to Third Party Content, Data Reports, Mapping, and Risk Screening Reports.
"Intellectual Property" means any patent, copyright, design rights, trade or service mark, moral rights, data protection rights, know-how or trade mark in each case whether registered or not and including applications for the same or any other rights of a similar nature anywhere in the world.
"Mapping" means a map, map data or a combination of historical maps of various ages, time periods and scales.
"Order" means an electronic, written or other order form submitted by the Client requesting Services from Groundsure in respect of a specified Site.
"Ordnance Survey" means the Secretary of State for Business, Innovation and Skills, acting through Ordnance Survey, Adanac Drive, Southampton, SO16 0AS, UK.
"Order Website" means the online platform through which Orders may be placed by the Client and accepted by Groundsure.
"Report" means a Risk Screening Report or Data Report for Commercial or Residential property.
"Residential" means any building or property used as or intended to be used as a single dwelling.
"Risk Screening Report" means a risk screening report comprising factual data with an accompanying interpretation by Groundsure.
"Services" means any Report, Mapping and/or Support Services which Groundsure has agreed to provide by accepting an Order pursuant to clause 2.6.
"Site" means the area of land in respect of which the Client has requested Groundsure to provide the Services.
"Third Party Content" means data, database information or other information which is provided to Groundsure by a Third Party Data Provider.
"User Guide" means the user guide, as amended from time to time, available upon request from Groundsure and on the website (www.Groundsure.com) and forming part of this Contract.

2 Scope of Services, terms and conditions, requests for insurance and quotations

2.1 Groundsure agrees to provide the Services in accordance with the Contract.
2.2 Groundsure shall exercise reasonable skill and care in the provision of the Services.
2.3 Subject to clause 7.3 the Client acknowledges that it has not relied on any statement or representation made by or on behalf of Groundsure which is not set out and expressly agreed in writing in the Contract and all such statements and representations are hereby excluded to the fullest extent permitted by law.
2.4 The Client acknowledges that terms and conditions appearing on a Client's order form, printed stationery or other communication, or any terms or conditions implied by custom, practice or course of dealing shall be of no effect, and that this Contract shall prevail over all others in relation to the Order.
2.5 If the Client or Beneficiary requests insurance in conjunction with or as a result of the Services, Groundsure shall use reasonable endeavours to recommend such insurance, but makes no warranty that such insurance shall be available from insurers or that it will be offered on reasonable terms. Any insurance purchased by the Client or Beneficiary shall be subject solely to the terms of the policy issued by insurers and Groundsure will have no liability therefor. In addition you acknowledge and agree that Groundsure does not act as an agent or broker for any insurance providers. The Client should take (and ensure that the Beneficiary takes) independent advice to ensure that the insurance policy requested or offered is suitable for its requirements.
2.6 Groundsure's quotations or proposals are valid for a period of 30 days only unless an alternative period of time is explicitly stipulated by Groundsure. Groundsure reserves the right to withdraw any quotation or proposal at any time before an Order is accepted by Groundsure. Groundsure's acceptance of an Order shall be binding only when made in writing and signed by Groundsure's authorised representative or when accepted through the Order Website.

3 The Client's obligations

3.1The Client shall comply with the terms of this Contract and
(i) procure that the Beneficiary or any third party relying on the Services complies with and acts as if it is bound by the Contract and
(ii) be liable to Groundsure for the acts and omissions of the Beneficiary or any third party relying on the Services as if such acts and omissions were those of the Client.
3.2 The Client shall be solely responsible for ensuring that the Services are appropriate and suitable for its and/or the Beneficiary's needs.
3.3 The Client shall supply to Groundsure as soon as practicable and without charge all requisite information (and the Client warrants that such information is accurate, complete and appropriate), including without limitation any environmental information relating to the Site and shall give such assistance as Groundsure shall reasonably require in the provision of the Services including, without limitation, access to the Site, facilities and equipment.
3.4 Where the Client's approval or decision is required to enable Groundsure to carry out work in order to provide the Services, such approval or decision shall be given or procured in reasonable time and so as not to delay or disrupt the performance of the Services.
3.5 Save as expressly permitted by this Contract the Client shall not, and shall procure that the Beneficiary shall not, re-sell, alter, add to, or amend the Groundsure Materials, or use the Groundsure Materials in a manner for which they were not intended. The Client may make the Groundsure Materials available to a third party who is considering acquiring some or all of, or providing funding in relation to, the Site, but such third party cannot rely on the same unless expressly permitted under clause 4.
3.6 The Client is responsible for maintaining the confidentiality of its user name and password if using the Order Website and the Client acknowledges that Groundsure accepts no liability of any kind for any loss or damage suffered by the Client as a consequence of using the Order Website.

4 Reliance

4.1The Client acknowledges that the Services provided by Groundsure consist of the presentation and analysis of Third Party Content and other content and that information obtained from a Third Party Data Provider cannot be guaranteed or warranted by Groundsure to be reliable.
4.2 In respect of Data Reports, Mapping and Risk Screening Reports, the following classes of person and no other are entitled to rely on their contents;
(i) the Beneficiary,
(ii) the Beneficiary's professional advisers, (iii) any person providing funding to the Beneficiary in relation to the Site (whether directly or as part of a lending syndicate),
(iv) the first purchaser or first tenant of the Site, and
(v) the professional advisers and lenders of the first purchaser or tenant of the Site.
4.3 In respect of Support Services, only the Client, Beneficiary and parties expressly named in a Report and no other parties are entitled to rely on its contents.
4.4 Save as set out in clauses 4.2 and 4.3 and unless otherwise expressly agreed in writing, no other person or entity of any kind is entitled to rely on any Services or Report issued or provided by Groundsure. Any party considering such Reports and Services does so at their own risk.

5 Fees and Disbursements

5.1Groundsure shall charge and the Client shall pay fees at the rate and frequency specified in the written proposal, Order Website or Order acknowledgement form, plus (in the case of Support Services) all proper disbursements incurred by Groundsure. The Client shall in addition pay all value added tax or other tax payable on such fees and disbursements in relation to the provision of the Services (together "Fees").
5.2 The Client shall pay all outstanding Fees to Groundsure in full without deduction, counterclaim or set off within 30 days of the date of Groundsure's invoice or such other period as may be agreed in writing between Groundsure and the Client ("Payment Date"). Interest on late payments will accrue on a daily basis from the Payment Date until the date of payment (whether before or after judgment) at the rate of 8% per annum.
5.3 The Client shall be deemed to have agreed the amount of any invoice unless an objection is made in writing within 28 days of the date of the invoice. As soon as reasonably practicable after being notified of an objection, without prejudice to clause 5.2 a member of Groundsure's management team will contact the Client and the parties shall then use all reasonable endeavours to resolve the dispute within 15 days.

6 Intellectual Property and Confidentiality

6.1 Subject to
(i) full payment of all relevant Fees and
(ii) compliance with this Contract, the Client is granted (and is permitted to sub-licence to the Beneficiary) a royalty-free, worldwide, non-assignable and (save to the extent set out in this Contract) non-transferable licence to make use of the Groundsure Materials.
6.2 All Intellectual Property in the Groundsure Materials are and shall remain owned by Groundsure or Groundsure's licensors (including without limitation the Third Party Data Providers) the Client acknowledges, and shall procure

acknowledgement by the Beneficiary of, such ownership. Nothing in this Contract purports to transfer or assign any rights to the Client or the Beneficiary in respect of such Intellectual Property.
6.3 Third Party Data Providers may enforce any breach of clauses 6.1 and 6.2 against the Client or Beneficiary.
6.4 The Client shall, and shall procure that any recipients of the Groundsure Materials shall:

(i) not remove, suppress or modify any trade mark, copyright or other proprietary marking belonging to Groundsure or any third party from the Services;

(ii) use the information obtained as part of the Services in respect of the subject Site only, and shall not store or reuse any information obtained as part of the Services provided in respect of adjacent or nearby sites;

(iii) not create any product or report which is derived directly or indirectly from the Services (save that those acting in a professional capacity to the Beneficiary may provide advice based upon the Services);

(iv) not combine the Services with or incorporate such Services into any other information data or service;

(v) not reformat or otherwise change (whether by modification, addition or enhancement), the Services (save that those acting for the Beneficiary in a professional capacity shall not be in breach of this clause 6.4(v) where such reformatting is in the normal course of providing advice based upon the Services);

(vi) where a Report and/or Mapping contains material belonging to Ordnance Survey, acknowledge and agree that such content is protected by Crown Copyright and shall not use such content for any purpose outside of receiving the Services; and

(vii) not copy in whole or in part by any means any map prints or run-on copies containing content belonging to Ordnance Survey (other than that contained within Ordnance Survey's OS Street Map) without first being in possession of a valid Paper Map Copying Licence from Ordnance Survey,

6.5 Notwithstanding clause 6.4, the Client may make reasonable use of the Groundsure Materials in order to advise the Beneficiary in a professional capacity. However, Groundsure shall have no liability in respect of any advice, opinion or report given or provided to Beneficiaries by the Client.
6.6 The Client shall procure that any person to whom the Services are made available shall notify Groundsure of any request or requirement to disclose, publish or disseminate any information contained in the Services in accordance with the Freedom of Information Act 2000, the Environmental Information Regulations 2004 or any associated legislation or regulations in force from time to time.

7.Liability: Particular Attention Should Be Paid To This Clause

7.1 This Clause 7 sets out the entire liability of Groundsure, including any liability for the acts or omissions of its employees, agents, consultants, subcontractors and Third Party Content, in respect of:

(i) any breach of contract, including any deliberate breach of the Contract by Groundsure or its employees, agents or subcontractors;

(ii) any use made of the Reports, Services, Materials or any part of them; and

(iii) any representation, statement or tortious act or omission (including negligence) arising under or in connection with the Contract.

7.2 All warranties, conditions and other terms implied by statute or common law are, to the fullest extent permitted by law, excluded from the Contract.
7.3 Nothing in the Contract limits or excludes the liability of the Supplier for death or personal injury resulting from negligence, or for any damage or liability incurred by the Client or Beneficiary as a result of fraud or fraudulent misrepresentation.
7.4 Groundsure shall not be liable for

(i) loss of profits;
(ii) loss of business;
(iii) depletion of goodwill and/or similar losses;
(iv) loss of anticipated savings;
(v) loss of goods;
(vi) loss of contract;
(vii) loss of use;
(viii) loss or corruption of data or information;
(ix) business interruption;
(x) any kind of special, indirect, consequential or pure economic loss, costs, damages, charges or expenses;
(xi) loss or damage that arise as a result of the use of all or part of the Groundsure Materials in breach of the Contract;
(xii) loss or damage arising as a result of any error, omission or inaccuracy in any part of the Groundsure Materials where such error, omission or inaccuracy is caused by any Third Party Content or any reasonable interpretation of Third Party Content;
(xiii) loss or damage to a computer, software, modem, telephone or other property; and
(xiv) loss or damage caused by a delay or loss of use of Groundsure's internet ordering service.

7.5 Groundsure's total liability in relation to or under the Contract shall be limited to £10 million for any claim or claims.
7.6 Groundsure shall procure that the Beneficiary shall be bound by limitations and exclusions of liability in favour of Groundsure which accord with those detailed in clauses 7.4 and 7.5 (subject to clause 7.3) in respect of all claims which the Beneficiary may bring against Groundsure in relation to the Services or other matters arising pursuant to the Contract.

8 Groundsure's right to suspend or terminate

8.1 If Groundsure reasonably believes that the Client or Beneficiary has not provided the information or assistance required to enable the proper provision of the Services, Groundsure shall be entitled to suspend all further performance of the Services until such time as any such deficiency has been made good.
8.2 Groundsure shall be entitled to terminate the Contract immediately on written notice in the event that:

(i) the Client fails to pay any sum due to Groundsure within 30 days of the Payment Date; or

(ii) the Client (being an individual) has a bankruptcy order made against him or (being a company) shall enter into liquidation whether compulsory or voluntary or have an administration order made against it or if a receiver shall be appointed over the whole or any part of its property assets or undertaking or if the Client is struck off the Register of Companies or dissolved; or

(iii) the Client being a company is unable to pay its debts within the meaning of Section 123 of the Insolvency Act 1986 or being an individual appears unable to pay his debts within the meaning of Section 268 of the Insolvency Act 1986 or if the Client shall enter into a composition or arrangement with the Client's creditors or shall suffer distress or execution to be levied on his goods; or

(iv) the Client or the Beneficiary breaches any term of the Contract (including, but not limited to, the obligations in clause 4) which is incapable of remedy or if remediable, is not remedied within five days of notice of the breach.

9. Client's Right to Terminate and Suspend

9.1 Subject to clause 10.1, the Client may at any time upon written notice terminate or suspend the provision of all or any of the Services.
9.2 In any event, where the Client is a consumer (and not a business) he/she hereby expressly acknowledges and agrees that:

(i) the supply of Services under this Contract (and therefore the performance of this Contract) commences immediately upon Groundsure's acceptance of the Order; and

(ii) the Reports and/or Mapping provided under this Contract are

(a) supplied to the Client's specification(s) and in any event
(b) by their nature cannot be returned.

10 Consequences of Withdrawal, Termination or Suspension

10.1 Upon termination of the Contract:

(i) Groundsure shall take steps to bring to an end the Services in an orderly manner, vacate any Site with all reasonable speed and shall deliver to the Client and/or Beneficiary any property of the Client and/or Beneficiary in Groundsure's possession or control; and

(ii) the Client shall pay to Groundsure all and any Fees payable in respect of the performance of the Services up to the date of termination or suspension. In respect of any Support Services provided, the Client shall also pay Groundsure any additional costs incurred in relation to the termination or suspension of the Contract.

11 Anti-Bribery

11.1 The Client warrants that it shall:

(i) comply with all applicable laws, statutes and regulations relating to anti-bribery and anti-corruption including but not limited to the Bribery Act 2010;

(ii) comply with such of Groundsure's anti-bribery and anti-corruption policies as are notified to the Client from time to time; and

(iii) promptly report to Groundsure any request or demand for any undue financial or other advantage of any kind received by or on behalf of the Client in connection with the performance of this Contract.

11.2 Breach of this Clause 11 shall be deemed a material breach of this Contract.

12 General

12.1 The Mapping contained in the Services is protected by Crown copyright and must not be used for any purpose other than as part of the Services or as specifically provided in the Contract.
12.2 The Client shall be permitted to make one copy only of each Report or Mapping Order. Thereafter the Client shall be entitled to make unlimited copies of the Report or Mapping Order only in accordance with an Ordnance Survey paper map copy license available through Groundsure.
12.3 Groundsure reserves the right to amend or vary this Contract. No amendment or variation to this Contract shall be valid unless signed by an authorised representative of Groundsure.
12.4 No failure on the part of Groundsure to exercise, and no delay in exercising, any right, power or provision under this Contract shall operate as a waiver thereof.
12.5 Save as expressly provided in this Contract, no person other than the persons set out therein shall have any right under the Contract (Rights of Third Parties) Act 1999 to enforce any terms of the Contract.
12.6 The Secretary of State for Business, Innovation and Skills ("BIS") or BIS' successor body, as the case may be, acting through Ordnance Survey may enforce a breach of clause 6.4(vi) and clause 6.4(vii) of these terms and conditions against the Client in accordance with the provisions of the Contracts (Rights of Third Parties) Act 1999.
12.7 Groundsure shall not be liable to the Client if the provision of the Services is delayed or prevented by one or more of the following circumstances:

(i) the Client or Beneficiary's failure to provide facilities, access or information;
(ii) fire, storm, flood, tempest or epidemic;
(iii) Acts of God or the public enemy;
(iv) riot, civil commotion or war;
(v) strikes, labour disputes or industrial action;
(vi) acts or regulations of any governmental or other agency;
(vii) suspension or delay of services at public registries by Third Party Data Providers;
(viii) changes in law; or
(ix) any other reason beyond Groundsure's reasonable control.

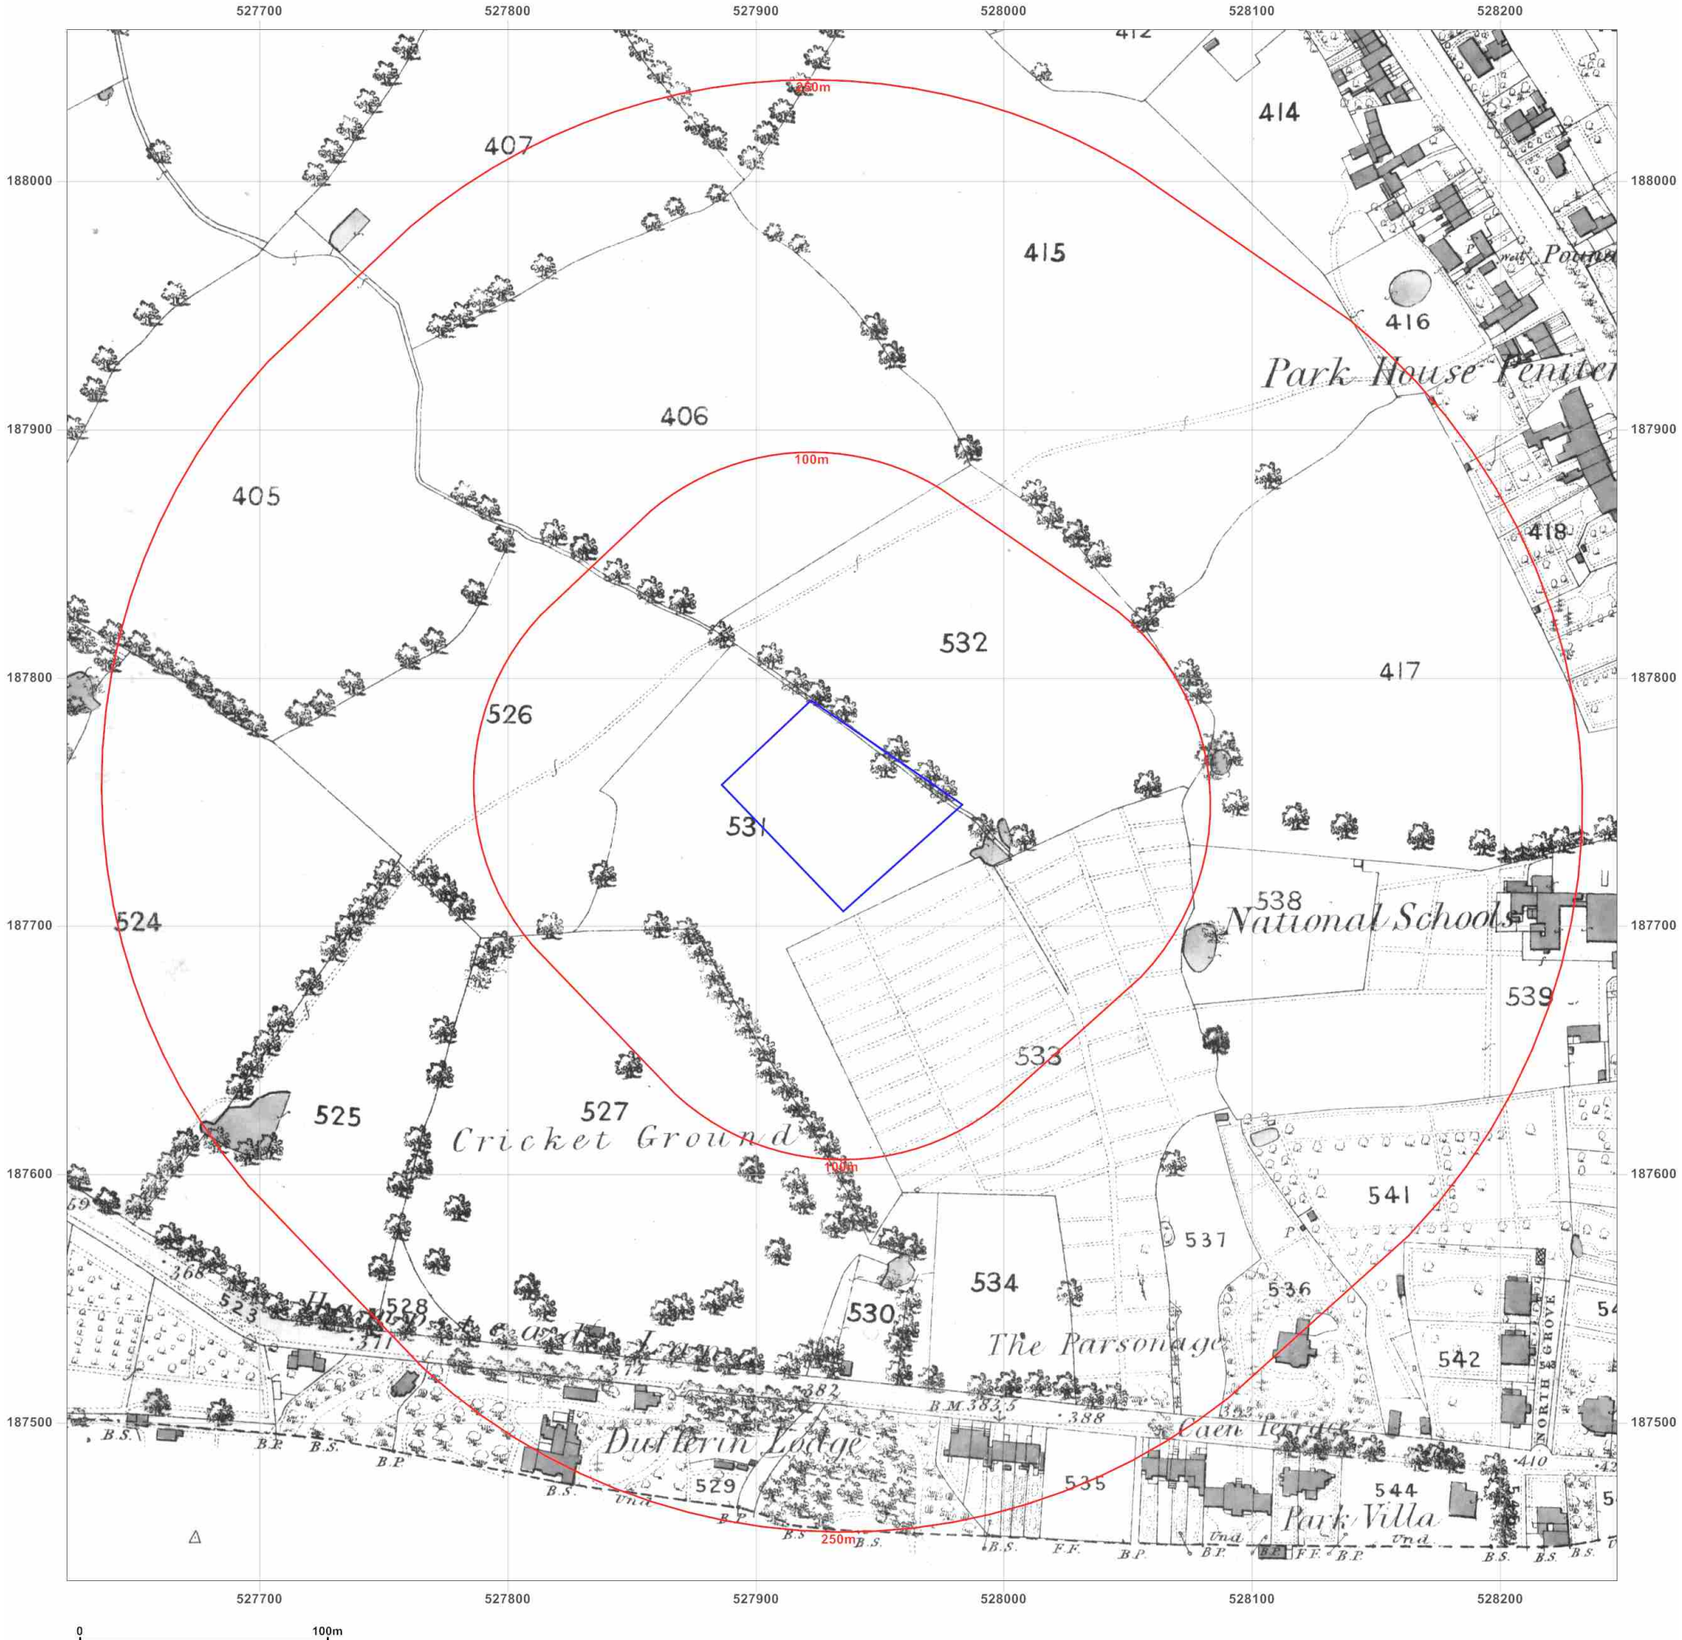
In the event that Groundsure is prevented from performing the Services (or any part thereof) in accordance with this clause 12.6 for a period of not less than 30 days then Groundsure shall be entitled to terminate this Contract immediately on written notice to the Client.

12.8 Any notice provided shall be in writing and shall be deemed to be properly given if delivered by hand or sent by first class post, facsimile or by email to the address, facsimile number or email address of the relevant party as may have been notified by each party to the other for such purpose or in the absence of such notification the last known address.

12.9 Such notice shall be deemed to have been received on the day of delivery if delivered by hand, facsimile or email (save to the extent such day is not a working day where it shall be deemed to have been delivered on the next working day) and on the second working day after the day of posting if sent by first class post.

12.10 The Contract constitutes the entire agreement between the parties and shall supersede all previous arrangements between the parties relating to the subject matter hereof.

12.11 Each of the provisions of the Contract is severable and distinct from the others and if one or more provisions is or should become invalid, illegal or unenforceable, the validity and enforceability of the remaining provisions shall not in any way be tainted or impaired.



12.12 This Contract shall be governed by and construed in accordance with English law and any proceedings arising out of or connected with this Contract shall be subject to the exclusive jurisdiction of the English courts.

12.13 Groundsure is an executive member of the Council of Property Search Organisation (CoPSO) and has signed up to the Search Code administered by the Property Codes Compliance Board (PCCB). All Risk Screening Reports shall be supplied in accordance with the provisions of the Search Code.

12.14 If the Client or Beneficiary has a complaint about the Services, written notice should be given to the Compliance Officer at Groundsure who will respond in a timely manner. In the event you are not satisfied with Groundsure's complaints handling process or you are unable to resolve the complaint, at your discretion you may refer the complaint to The Property Ombudsman Scheme at the following URL/email: website www.tpos.co.uk or email: admin@tpos.co.uk

12.15 The Client agrees that it shall, and shall procure that each Beneficiary shall, treat in confidence all Confidential Information and shall not, and shall procure that each Beneficiary shall not (i) disclose any Confidential Information to any third party other than in accordance with the terms of this Contract; and (ii) use Confidential Information for a purpose other than the exercise of its rights and obligations under this Contract. Subject to clause 6.6, nothing shall prevent the Client or any Beneficiary from disclosing Confidential Information to the extent
required by law

Soil Consultants Ltd (SCL) has prepared this Report for the Client in accordance with the Terms of Appointment under which our services were performed. No other warranty, expressed or implied, is made as to the professional advice included in this Report or any other services provided by us. This Report may not be relied upon by any other party without the prior and express written agreement of SCL.

TABLE OF CONTENTS

1.0 Introduction 1
2.0 Site description 2
3.0 Exploratory work 3
3.1 Dynamic sampler boreholes 3
3.2 California Bearing Ratio testing 3
3.3 Geotechnical and chemical laboratory testing 3
4.0 Ground conditions 4
4.1 Made ground 4
4.2 Claygate Member 4
4.3 London Clay Formation 4
4.4 Groundwater 4
5.0 Geotechnical assessment 5
5.1 Basement construction and retaining walls 5
5.2 Spread foundations at basement level 6
5.3 Piled foundations 7
5.4 Floor slabs, soil heave and hydrostatic pressures 8
5.5 Pavement construction 10
5.6 Foundation concrete 10

General Information, Limitations and Exceptions

APPENDIX

Fieldwork, in-situ testing and monitoring

- Dynamic sampler borehole records
- Standard Penetration Test results
- SPT hammer energy rating certificate
- TRL DCP results (California Bearing Ratio)

Geotechnical laboratory testing

- Moisture content and index property testing
- Plasticity charts
- Determination of California Bearing Ratio (remoulded samples)

Chemical testing

Sulphate/sulphur/pH test results (DETS Ltd Report: 19-00061, 10/01/19)

Plans & drawings

- Existing site and service layout (Randall Surveys LLP; drawing no. 13849/JV/2; dated January 2016)
- Proposed plan
- Proposed section (Ed Toovey architects, Drawing No: 1182/GS/01, Aug 2018)
- Site Plan
- Location Plan

1.0 INTRODUCTION

Consideration is being given to the refurbishment and development of the existing Mallinson Sports Centre. Four main phases of work have been identified including the construction of an additional sports hall and new courts, together with the refurbishment of the existing swimming pool.

A site investigation was undertaken by Soil Consultants Ltd in 2016 in relation to scheme (SCL Ref: 9916/JRCB/OT, 22/02/16). The scope of the development works has since increased and we were commissioned by Pringuer-James Consulting Engineers (PJCE), on behalf of the client, Highgate School, to carry out a supplementary ground investigation to cover the increased development area, mainly to the north-west and south-east of the main buildings.

This report summarises the additional investigation, discusses the ground sequence in relation to the existing investigation and then provides advice on foundation and pavement design, updated as required.

No additional environmental testing/appraisal was requested.

2.0 SITE DESCRIPTION

A detailed description of the site is included in our 2016 report. The overall site has not undergone major change but construction work was being undertaken in the main swimming pool area and courtyard area which were inaccessible during this phase of investigation.

The supplementary investigation targeted the areas to the north-west and south-east of the existing buildings where the additional work is proposed. The north-western area was predominately occupied by 'Eton Five Courts' and an asphalt-surfaced playground. Numerous lime and sycamore trees were located around the boundary of this area; the tree details are noted on the Existing Site & Services Layout Plan, dated Jan 2016 Drawing No. 13849/JV/1 provided by PJCE (and reproduced in the Appendix).

The south-easterly area of the site mainly comprised open ground with the exploratory locations being positioned between the existing sports hall and the all-weather pitch. The ground in this area was locally boggy at the time of our investigation in December 2018.

A Site Plan showing the new site outline is included in the Appendix.

3.0 EXPLORATORY WORK

The supplementary ground investigation was carried out on 17th December 2018 and comprised the following elements:

3.1 Dynamic sampler boreholes

Four dynamic (windowless) sampler boreholes (WS1 to WS4) were completed using a tracked drilling rig under the supervision of an experienced geotechnical engineer from SCL. The boreholes were taken to depths of between 5.0m and 5.45m below ground level (bgl).

Both hand vane and standard penetration testing (SPT) was carried out at regular intervals and representative samples were taken for geotechnical testing. The hammer Energy Ratio (Er) for the SPT equipment used was 60%; the relevant test certificate is appended.

Monitoring pipes (35mm ID) were installed within all four boreholes to facilitate future groundwater and gas monitoring.

3.2 California Bearing Ratio testing

Three in-situ CBR tests were carried out using the TRL Dynamic Cone Penetrometer (DCP). Bulk samples were also retrieved at the same locations for laboratory remoulded CBR tests.

3.3 Geotechnical and chemical laboratory testing

The following geotechnical laboratory testing was completed:

- Natural moisture content and index properties (Atterberg Limit) tests
- CBR tests on remoulded samples
- Soluble sulphate/sulphur/pH (by DETS Ltd)

The engineering borehole logs and the geotechnical laboratory testing results are included in the Appendix. The ground levels at the exploratory locations have been interpolated from the topographical survey drawing provide by PJCE (untitled).

4.0 GROUND CONDITIONS

The site investigation carried out in 2016 indicated that the site is underlain by a variable thickness of made ground overlying the Claygate Member, resting upon the London Clay Formation. This ground sequence was generally confirmed by the supplementary investigation and a summary of the sequence, taking into account both investigation phases, is outlined below:

4.1 Made ground

The made ground was present in all boreholes and extended to depths of between 0.30m and 1.10m bgl. It was variable in composition, comprising either dark grey/black gravel or soft/firm gravelly clay, with subsidiary amounts of ash, brick, concrete, glass and clinker fragments.

4.2 Claygate Member

The Claygate Member was present within all boreholes beneath the made ground layer, and extended to depths of between 3.60m and 3.90m bgl; this is equivalent to between approximately +101.95mOD and +106.10mOD. It generally comprised soft or firm brown/orange, pale grey and blue/grey clay with a variable silt and sand content and occasional gravelly pockets. Occasional pockets of clayey gravel were identified in all boreholes (except of WS1) suggesting that localised natural re-working has occurred. Hand vane tests and SPT N-values indicate a low to medium strength classification. Index property tests indicate a low to medium (locally high) plasticity clay/silt (BS scheme) and non-plastic to medium volume change potential (NHBC scheme).

4.3 London Clay Formation

The London Clay Formation was met at depths of between 3.60m and 3.90m bgl. Its interface with the Claygate Member exhibited a marked dip from about +105m/+106mOD in east of the site down to about +102mOD/+103mOD in the western area. The formation generally comprised dark grey/grey silty clay with a variable sand content; occasional silt/sand partings were also present. Hand vane tests, SPT N-values and triaxial tests indicate the clay to be locally low strength in the upper levels, becoming medium then high strength with depth. Index property tests indicate an intermediate to high plasticity clay (BS scheme) and medium volume change potential (NHBC scheme).

4.4 Groundwater

Groundwater inflows generally occurred at depths of between 2.20m and 3.60m bgl. There appears to be a general flow down to the west, with water levels at about +106m/+107mOD in the east, falling to about +104m/+105mOD in the central and western parts of the site following the topography.

Localised shallower inflows were observed in the 2016 trial pits at between 0.90m and 1.20m depth, and in the 2018 borehole, WS1, at about 0.30m depth; these observations indicate that shallow perched groundwater is present locally.

5.0 GEOTECHNICAL ASSESSMENT

The proposed scheme involves the phased refurbishment/development of the existing sports centre. A summary of the proposals in areas covered by the supplementary investigation is as follows:

- In the western part of the site, the existing covered courts and squash courts are to be demolished, with the subsequent construction of a new sports hall. FFL of the new hall will be +103.45mOD, ie between approximately 2.5m to 3.5m below current ground level. We understand that a piled retaining wall is to be installed prior to excavation down to the proposed formation level. Piled foundations are, we understand, proposed to carry the structural loads
- In the eastern, higher-lying part of the site, new covered courts are to be constructed. An FFL of +106.9mOD is proposed (ie the same as the existing sports hall), and this is between approximately 1.5m to 2.5m below existing ground level. Again, we understand that a piled retaining wall is planned to support the excavation, with the structural loads being supported by piles

A cross section through the site showing the proposed configuration is included in the Appendix.

The supplementary boreholes have indicated that the upper part of the ground sequence in the eastern and western parts of the site is not significantly different from the 2016 investigation. The following sections address the proposed 'basement' excavations and piled foundations. We have also included advice on the use of spread foundations at basement level.

5.1 Basement construction and retaining walls

Western zone (new sports hall): the proposed FFL is +103.45mOD and allowing for the basement slab construction the overall excavation level is likely to be about +103.00mOD, where we expect the Claygate Beds (locally naturally reworked) or the London Clay to be exposed. The existing ground level lies at between about +106mOD to +107mOD and therefore excavation depths of between 3m to 4m are envisaged. The groundwater in the two western boreholes (WS1 and WS2) was present at between +104.7mOD and +106.4mOD (with the latter probably being a localised near-surface pocket) and therefore the retaining wall will need to be water-tight to provide adequate groundwater control. Either a secant bored pile wall or steel sheet piled wall could be considered.

Eastern zone (new covered courts): the proposed FFL is +106.9mOD for these new courts, with probable overall excavation level to about +106.5mOD allowing for the slab. The ground surface in this area varies between +109.5mOD and +108.5mOD and excavation depths of between 2m to 3m will therefore be required. Groundwater was encountered in the boreholes at between +106.2mOD and +107.05mOD, and therefore the excavation is likely to extend slightly below the water table, at least locally. We recommend that continued monitoring of the borehole installations is carried out to confirm the groundwater level in this area as equilibrium levels could be significantly higher than those recorded at the end of the fieldwork. On the basis of the current information, it would be advisable to allow for a water-tight structure such as a secant bored pile wall or a sheet piled wall.

Careful selection of the appropriate design parameters will be needed, incorporating allowances for the presence of groundwater and the possibility of soil softening. The following table of coefficients may be used for the preliminary design of the basement retaining wall:

Stratum	Bulk density (Mg/m^3)	Effective cohesion, c' (kN/m^2)	Effective friction angle, ϕ' (degrees)
Made ground	1.80	0	22
Claygate Member	2.00	0	23
London Clay:			
<5m below basement level	2.00	0	21
>5m below basement level	2.00	5	21

Eurocode 7 stipulates that partial material factors must be applied to the best estimates of geotechnical soil properties during the design stage. The design engineer must ensure that the correct comparisons are made between Design Actions and Design Resistances after the application of appropriate partial factors. The determination of appropriate earth pressure coefficients and the pattern of earth pressure distribution should be carried out by the geotechnical designer; these will depend upon the type/geometry of the wall and the overall design approach. The piled walls may of course also be used to provide vertical load capacity subject to the necessary allowance being made for interaction effects.

Due consideration should be given by the designer to the potential presence of desiccated soils where the walls lie within a zone of tree root influence. If trees are removed or die, any desiccated clays could conceivably result in higher than active forces on the back of the wall and this will need to be addressed.

We recommend that a specialist contractor or engineer is consulted to confirm the most appropriate type of wall and to provide the final wall design.

5.2 Spread foundations at basement level

Western area (new sports hall)

The basement excavation is expected to either expose the London Clay or remain just above its interface with the Claygate Beds. We consider that any foundations should be placed within the London Clay at or below +102mOD. For a preliminary assessment of the feasibility/sizing of such foundations, we envisage that an allowable bearing resistance of $110kN/m^2$ would be achievable; this would be applicable to moderate sized strip or pad foundations, say up to 2.5m width. As required by EC7, the design engineer must ensure that the correct comparisons are made between Design Actions and Design Resistances after the application of appropriate partial factors and using the final base geometry. For ULS design, bearing resistances should be determined, using drained and/or undrained parameters as appropriate, to calculate the degree of utilisation of the foundation (limit state GEO).

Eastern area (new covered courts)

The basement excavation is expected to remain within the Claygate Beds, with the London Clay being between about 0.40m and 1.40m below the anticipated excavation level. Spread foundations could be placed within the Claygate Beds but with a limited allowable bearing resistance of, say, 70kN/m^2 to allow for the presence of soft/low strength zones. A higher allowable bearing resistance of 110kN/m^2 could be adopted for foundations in the more competent medium strength London Clay, although these will obviously need to be deeper. The EC7 design approach discussed above will again need to be followed.

Desiccation

A number of mature trees are present, particularly on the northern and western site boundaries. Whilst this is not a residential development, we recommend that the guidance contained within the NHBC Standards (Chapter 4.2 'Building near trees') is followed, with local deepening being carried out below any potential zones of desiccated clay. We recommend that a 'medium' volume change potential is used for all soils to assess minimum 'safe' founding depths.

Excavations

Foundation excavations will take place from basement level. The retaining structures around the periphery are expected to control any sustained groundwater inflows, but there may still be localised pockets encountered; we anticipate that these will be effectively controlled by localised pumping. The natural soils, particularly the Claygate Beds, are expected to be highly susceptible to water-softening/disturbance and any foundations will need to be cast immediately following excavation, or a blinding layer placed.

All foundations must be carefully inspected by an experienced professional person to ensure that suitable soils have been exposed, and local deepening should be carried out if very soft soils or root-infested/desiccated soils are encountered.

5.3 Piled foundations

Piled foundations will transfer the structural loads into the relatively competent London Clay. CFA piles are considered to be most appropriate for the ground and groundwater conditions present. The following parameters, as recommended in our previous 2016 report, may be used for a preliminary estimate of pile resistance:

Shaft adhesion

Stratum	Depth / level	Undrained cohesion (from strength profile)	Ultimate unit shaft adhesion 'q_s'
Made ground	Up to 1.10m thick	N/A	Ignore
Claygate Member and upper London Clay (note e)	Above +103mOD	30kPa	15kPa
London Clay	Below +103mOD to +89mOD	Increases linearly from 120kN/m^2 at a rate of 5.7kPa/m	Increases linearly from 60kPa at a rate of 2.85kPa/m (incorporates α = 0.50)

Notes:

a) Unit shaft adhesion 'q_s' = α x c_u (where α = 0.50 and c_u is the undrained cohesion from the design line)

b) The α value of 0.5 is based upon 102mm diameter triaxial tests and this should not be varied

c) The average shaft adhesion over the pile length should be limited to 110kN/m^2

d) The maximum value for unit shaft adhesion should be limited to 140kN/m^2

e) The contribution of all potentially desiccated soils within the zone of tree influence should be ignored. Sufficient tensile reinforcement should be incorporated, as required, to resist swelling forces

End bearing

Stratum	Depth / level	Undrained cohesion (from strength profile)	Ultimate unit base resistance 'q_b'
London Clay	Below +95mOD to +89mOD	Increases linearly from 166kPa at a rate of 5.7kPa/m	Increases linearly from 1,494kPa at a rate of 51.3kPa/m (incorporates Nc = 9)

Notes:

a) Unit base resistance in clay 'q_b' = Nc x c_u (where Nc = 9 and c_u is the equivalent undrained cohesion from the design line)

A piling specialist must be consulted at an early stage to advise on the most appropriate pile type and to ultimately provide the final pile design.

5.4 Floor slabs, soil heave and hydrostatic pressures

The excavations for the new sports hall and the covered/sunken courts will involve the permanent removal of soil which will theoretically result in an element of heave in the London Clay; factors such as the length of the construction programme, the restraining effects of any axially loaded piles and the basement slab stiffness would determine the amount of soil heave which could actually occur. In addition to this stress-related heave, there is also potentially an element of swell-related movement in peripheral areas where the slab is in the zone of any tree influence.

Suspended floor slab

This type of slab would incorporate a suitable void beneath to accommodate the soil heave/swell. The proposed excavations will result in an average unloading of about 60kN/m^2 and 40kN/m^2 in the areas of the new sports hall and covered/sunken courts, respectively. We have carried out a preliminary analysis and this indicates that total unrestrained heave of approximately 30mm and 15mm respectively could occur as a result of the unloading for the sports hall and courts. Approximately 50% of this heave movement is likely to occur during a typical construction programme, leaving maximum possible post-construction heave of about 15mm and 8mm respectively to be accommodated for stress-related soil heave. In any areas where the slab lies within the zones of tree influence, NHBC guidelines should be followed when determining the void thickness.

Ground-bearing slab

The slabs could be ground bearing and designed to withstand potential heave forces/movements. With respect to any stress-related ground heave, if it is (reasonably) assumed that the relationship between heave movement and pressure is linear, the maximum heave pressure for an infinitely stiff slab could therefore be about 30kN/m^2 (sports hall) and 20kN/m^2 (courts) for the fully constrained condition. However, this will not occur in reality and the heave pressure beneath a more flexible slab will clearly be less (due stress dissipation as the slab deflects); we anticipate that an 'average' stiffness slab would experience heave pressures of the order of 15kN/m^2 and 10kN/m^2 respectively, with <10mm movement. The slab self-weight will cancel out a significant proportion of these heave forces and this approach is therefore expected to be suitable.

In any peripheral zones where the slabs may lie within zones of tree influence, we recommend that NHBC guidance is used to identify the extent of the associated wedge of theoretically desiccated soils, using a 'medium' volume change potential. If this wedge extends below the proposed slab, it is recommended that potentially affected soils are removed and replaced with compacted granular fill.

Proof-rolling should be carried out to identify any significant soft spots which should be replaced with compacted granular fill. Careful inspection of the exposed formation should be carried out and if any root-infested or obviously desiccated soils remain, these should again be removed and replaced with compacted granular fill.

As discussed in Section 5.2, the exposed soils are likely to be highly susceptible to water-softening and disturbance. The exposed formation must be protected from rain/run-off and blinded/foundations cast as soon as practical.

Hydrostatic pressure

It will be necessary to consider uplift of the slab due to potential hydrostatic pressures and in this respect the guidelines incorporated in BS8102:2009 should be followed. The slab design will need to take account of potential seasonal fluctuations and/or accidental and flood conditions. We consider that that a design water level at 1m depth below current ground level would be suitable for preliminary purposes and this

would result in hydrostatic uplift pressures of about 30kN/m^2 and 20kN/m^2 on the sports hall and covered court slabs respectively.

The above soil heave estimates assume hydrostatic conditions with total stress used throughout and thus they include the water pressure in any soil uplift pressures/stresses. In the long-term condition, if the soil is permitted to heave (the slab deflects or there is a void former beneath the slab) then the water pressure will still remain. It is therefore important to note that the water pressure is not additional to the heave pressure and should be taken as the minimum uplift pressure for design.

5.5 Pavement construction

Following removal of topsoil, a CBR value of 2% is considered appropriate for the underlying shallow made ground and natural clay soils. The formation must be proof-rolled prior to pavement construction, and any soft/loose zones replaced with suitably compacted granular material. It would be prudent to use a flexible paving solution in areas likely to be affected by future ground movement as a result of possible desiccation and seasonal variations in moisture content.

5.6 Foundation concrete

The concrete classification has been assessed using the results from both phases of investigation. Low to moderate concentrations of soluble sulphates have been measured within slightly acidic to slightly alkaline pH values. The results fall into Site Design Classes DS-1 to DS-2 of Table C2 given in BRE Special Digest 1 (2005). We assess the site as having 'mobile' groundwater and this would result in an ACEC Site Class of AC-2.

Consideration should also be given to the potential oxidation of pyritic soils. Following the procedure recommended in the BRE digest, the amount of oxidisable sulphides is seen to be >0.3% in just under 50% of the samples (including results from initial site investigation), suggesting that pyrite is probably present; this substantiates observations made during sample description. The characteristic value of Total Potential Sulphate is 2.9%, which equates to Class DS-4 with a resultant classification of ACEC AC-4. If it is deemed unlikely that the piles and basement raft/slab will be exposed to disturbed ground which might be vulnerable to oxidation, this more onerous classification may not be required; this must be determined by the foundation designer who should provide the final classification.

GENERAL INFORMATION, LIMITATIONS AND EXCEPTIONS

Unless otherwise stated, our Report should be construed as being a Ground Investigation Report (GIR) as defined in BS EN1997-2. Our Report is not intended to be and should not be viewed or treated as a Geotechnical Design Report (GDR) as defined in EN1997-2. Any 'design' recommendations which are provided are for guidance only and are intended to allow the designer to assess the results and implications of our investigation/testing and to permit preliminary design of relevant elements of the proposed scheme.

The methods of investigation used have been chosen taking into account the constraints of the site including but not limited to access and space limitations. Where it has not been possible to reasonably use an EC7 compliant investigation technique we have adopted a practical technique to obtain indicative soil parameters and any interpretation is based upon our engineering experience and relevant published information.

The Report is issued on the condition that Soil Consultants Ltd will under no circumstances be liable for any loss arising directly or indirectly from ground conditions between the exploratory points which differ from those identified during our investigation. In addition Soil Consultants Ltd will not be liable for any loss arising directly or indirectly from any opinion given on the possible configuration of strata both between the exploratory points and/or below the maximum depth of the investigation; such opinions, where given, are for guidance only and no liability can be accepted as to their accuracy. The results of any measurements taken may vary spatially or with time and further confirmatory measurements should be made after any significant delay in using this Report.

Comments made relating to ground-water or ground-gas are based upon observations made during our investigation unless otherwise stated. Ground-water and ground-gas conditions may vary with time from those reported due to factors such as seasonal effects, atmospheric effects and and/or tidal conditions. We recommend that if monitoring installations have been included as part of our investigation, continued monitoring should be carried out to maximise the information gained.

Specific geotechnical features/hazards such as (but not limited to) areas of root-related desiccation and dissolution features in chalk/soluble rock can exist in discrete localised areas - there can be no certainty that any or all of such features/hazards have been located, sampled or identified. Where a risk is identified the designer should provide appropriate contingencies to mitigate the risk through additional exploratory work and/or an engineered solution.

Where a specific risk of ground dissolution features has been identified in our Report (anything above a 'low' risk rating), reference should be made to the local building control to establish whether there are any specific local requirements for foundation design and appropriate allowances should be incorporated into the design. If such a risk assessment was not within the scope of our investigation and where it is deemed that the ground sequence may give rise to such a risk (for example near-surface chalk strata) it is recommended that an appropriate assessment should be undertaken prior to design of foundations.

Where spread foundations are used, we recommend that all excavations are inspected and approved by suitably experienced personnel; appropriate inspection records should be kept. This should also apply to any structures which are in direct contact with the soil where the soil could have a detrimental effect on performance or integrity of the structure.

Ground contamination often exists in small discrete areas - there can be no certainty that any or all such areas have been located, sampled or identified.

The findings and opinions conveyed in this Report may be based on information from a variety of sources such as previous desk studies, investigations or chemical analyses. Soil Consultants Limited cannot and does not provide any guarantee as to the authenticity, accuracy or reliability of such information from third parties; such information has not been independently verified unless stated in our Report.

Our Report is written in the context of an agreed scope of work between Soil Consultants Ltd and the Client and should not be used in any different context. In light of additional information becoming available, improved practices and changes in legislation, amendment or re-interpretation of the assessment or the Report in part or in whole may be necessary after its original publication.

Unless otherwise stated our investigation does not include an arboricultural survey, asbestos survey, ecological survey or flood risk assessment and these should be deemed to be outside the scope of our investigation.

(Rev_1_08_03_2013)

APPENDIX

Fieldwork, in-situ testing and monitoring

- Dynamic sampler borehole records
- Standard Penetration Test results
- SPT hammer energy rating certificate
- TRL DCP results (California Bearing Ratio)

Geotechnical laboratory testing

- Moisture content and index property testing
- Plasticity charts
- Determination of California Bearing Ratio (remoulded samples)

Chemical testing

Sulphate/sulphur/pH test results (DETS Ltd Report: 19-00061, 10/01/19)

Plans & drawings

- Existing site and service layout (Randall Surveys LLP; drawing no. 13849/JV/2; dated January 2016)
- Proposed plan
- Proposed section (Ed Toovey architects, Drawing No: 1182/GS/01, Aug 2018)
- Site Plan
- Location Plan

IMPORTANT NOTES

The details and information shown hereon relating to underground drains, cables etc. are as obtained by normal field survey observations subject to the restrictions listed in the NJUSC guidelines, Service Co.s, and sewer records will only have been consulted on specific request and, although all reasonable effort will have been made, no guarantee of accuracy of these records can be given.

Sewer and manhole details shown on this drawing have been obtained by observation and measurement from the surface and as such cannot be guaranteed. Where possible sewer details will be verified in the project design we would recommend that entry into the chamber be undertaken using a specialist team, appropriately qualified for confined space entry. These teams can be supplied upon request.

The pipe and cable routes shown on this drawing have been located using electronic surface detection equipment and/or ground penetrating radar, no trial holes have been dug in order to confirm their presence and position. We therefore cannot guarantee its fullness to be correct at the time of the survey due care must be taken when any excavation is undertaken on the site. Trace depths are quoteable metres.

The portrayal of a service on this drawing may indicate the presence of multiple cables/pipes. The exact number will only be indicated where this could be accurately determined.

Hatching denotes an area containing possible services which could not be traced electronically or by GPR, where used, but have been abstracted from service drawings.

The plan position and depth of any services portrayed on this drawing is accurate to +/- 10% of the depth of that service.

Where the precise location and/or depth of a service is critical to design and/or construction, trial holes are recommended to confirm the details provided on this drawing.

This drawing should be read in conjunction with any record drawings available from the statutory authorities.

This investigation has been undertaken within the constraints of the client's instruction/contract, together with those set out in the 'General information, limitations and exceptions' section at the end of this report. The SCL 'Standard Terms of Appointment' are also included at the end of this report and these identify the contractual arrangements for the investigation. Conclusions or recommendations made in this report are limited to those which can be reasonably based upon the research and/or intrusive investigation work carried out. Any comments which rely on third-party information which has been provided to us are made in good faith and on the assumption that such information is accurate. SCL have not carried out independent validation of any third-party information.

Soil Consultants Ltd (SCL) has prepared this Report for the Client in accordance with the Terms of Appointment under which our services were performed. With respect to third parties, no other warranty, expressed or implied, is made as to the professional advice included in this Report or any other services provided by us. This Report may not be relied upon by any other party without the prior and express written agreement of SCL.

- Site Plan
- Location Plan

1.0 INTRODUCTION

Consideration is being given to the construction of a new sports pitch which will be created by a cut and fill operation. In connection with the proposed works, Soil Consultants Ltd (SCL) were commissioned by Pringuer-James Consulting Engineers Ltd (PJCE), on behalf of the client, Highgate School, to carry out a preliminary ground investigation to identify the ground sequence and groundwater conditions. Previous ground investigations have been undertaken by SCL for the Mallinson Sports Centre buildings to the west of the current area of interest (Reports refs: 9916/JRCB, 22/02/16 and 9916A/MR, 06/02/19).

This report describes the intrusive investigation undertaken and provides a summary of the ground conditions encountered. Neither geotechnical nor environmental/contamination testing were requested within the specified scope of investigation.

2.0 SITE DESCRIPTION

A summary description of the site and its general setting is as follows:

Element	Description
Site location and setting	▪ The site is located in London Borough of Haringey, approximately 500m south from Highgate town centre ▪ Development area is within the grounds of Mallinson Sports Centre, Highgate school ▪ NGR 528020 , 187765
Site dimensions	▪ The site is roughly rectangular in shape measuring – about 60m (NW-SE) x 50m (SE-NE)
Site boundaries	▪ The site is encircled by mature trees ▪ Mallinson Sports Centre building and Bishopswood Road are present tot he west ▪ An all-weather sports pitch is present to the south of the site, beyond a line of mature trees and green areas ▪ The rear gardens of residential properties which front onto Broadlands Road are present to the north ▪ A copse of densely planted mature trees forms the eastern site boundary
Site description	▪ The site comprises an open sloping grassed area
Topography and site levels	▪ Topographical information supplied (Randall Surveys LLP, Ref: 13849/JV/1, Jan 2016) ▪ Spot levels indicate that the site slopes down gently to the west from a maximum of about +110mOD on the eastern boundary down to about +108mOD in the west

Element	Description
Existing vegetation within site and adjacent properties	▪ Mature trees on all boundaries including oak, sycamore willow and ash. Tree heights vary with the highest being about 18m tall

The current site features are shown on the Site Plan and Site Photographs which are included in the Appendix.

3.0 EXPLORATORY WORK

The ground investigation was carried out in February 2024 and is described below.

3.1 Constraints of investigation

At the time of the investigation a large proportion of the site area was waterlogged with pooled water on the ground surface. Due to the very soft nature of the ground, access was limited and it was not possible to undertake BH01 and BH02.

The investigation was carried out in accordance with the requirements of PJCE at the specified locations.

3.2 Dynamic sampler boreholes

Three dynamic sampler boreholes (BH03, BH04, BH05) were completed using operated equipment under the supervision of an experienced geo-environmental engineer. In-situ Standard Penetration Testing (SPT) were carried out at appropriate intervals. The hammer Energy Ratio (E_r) for the SPT equipment used was 64%; the relevant test certificate is appended.

4.0 GROUND CONDITIONS

Reference to published BGS data indicates that the site is underlain by the Claygate Member resting upon the London Clay. Beneath variable made ground/superficial soils, the investigation encountered an upper layer of essentially brown/grey mottled silty sandy clay overlying grey to dark grey clay silty sandy clay. For the purposes of this discussion, we have identified the upper mottled clay layer as the Claygate Member and the underlying darker clay as the London Clay. In fact, both of these sub-units are incorporated under the parent unit of the London Clay Formation.

Detailed descriptions of the soils are included on the appended borehole logs. A summary of the ground sequence is as follows:

Stratum	Depth to base	Description and properties
Topsoil	0.20m	➢ Dark brown clayey topsoil
Made ground	Between 0.35m and 0.40mbgl	➢ Dark brown silty sandy gravelly clay ➢ Variable amounts of brick, slate, clinker and ceramic tile fragments ➢ Assessed as being of soft consistency
Superficial Deposits	Between 1.00m and 1.20mbgl	➢ Orange/brown silty sandy gravelly clay ➢ Variable silt, sand and gravel content ➢ Occasional to frequent live rootlets ➢ Assessed as being of soft or firm consistency ➢ SPT N value of 10 indicates medium strength
Claygate Member	Between 2.70m and 3.50mbgl	➢ Brown, grey and orange silty sandy to very sandy clay ➢ Locally grades to clayey sand ➢ Locally laminated ➢ Assessed as soft to firm consistency ➢ SPT N values (between 9 and 14) and hand vane results generally indicate medium strength clay
London Clay	>5.45mbgl (extended below base of boreholes)	➢ Grey silty sandy to very sandy clay ➢ Locally grades to clayey sand ➢ Assessed as being of firm to stiff consistency ➢ SPT N values (between 15 and 20) indicate high strength clay
Groundwater:	➢ Encountered at 0.8mbgl within the inspection pit of BH03 ➢ Strata generally appeared 'damp' below about 1.20m ➢ End of drilling rest levels at depths of between 1.52m and 2.50mgl	

GENERAL INFORMATION, LIMITATIONS AND EXCEPTIONS

Unless otherwise stated, our Report should be construed as being a Ground Investigation Report (GIR) as defined in BS EN1997-2. Our Report is not intended to be and should not be viewed or treated as a Geotechnical Design Report (GDR) as defined in EN1997-2. Any 'design' recommendations which are provided are for guidance only and are intended to allow the designer to assess the results and implications of our investigation/testing and to permit preliminary design of relevant elements of the proposed scheme.

The methods of investigation used have been chosen taking into account the constraints of the site including but not limited to access and space limitations. Where it has not been possible to reasonably use an EC7 compliant investigation technique we have adopted a practical technique to obtain indicative soil parameters and any interpretation is based upon our engineering experience and relevant published information.

The Report is issued on the condition that Soil Consultants Ltd will under no circumstances be liable for any loss arising directly or indirectly from ground conditions between the exploratory points which differ from those identified during our investigation. In addition, Soil Consultants Ltd will not be liable for any loss arising directly or indirectly from any opinion given on the possible configuration of strata between the exploratory points, below the maximum depth of the investigation or where site conditions have changed since the exploratory work; such opinions, where given, are for guidance only and no liability can be accepted as to their accuracy. The results of any measurements taken may vary spatially or with time and further confirmatory measurements should be made after any significant delay in using this Report. We will provide an indication of the strata configuration within the site based upon exploratory holes undertaken. Any strata boundaries shown will relate to the principal layers but it should be noted that these boundaries could be gradational and the depths identified would then not be definitive. The boundary depths/levels are given for guidance only.

Comments made relating to groundwater or ground-gas are based upon observations made during our investigation unless otherwise stated. Groundwater and ground-gas conditions may vary with time from those reported due to factors such as seasonal effects, atmospheric effects and and/or tidal conditions. We recommend that if monitoring installations have been included as part of our investigation, continued monitoring should be carried out to maximise the information gained.

Specific geotechnical features/hazards such as (but not limited to) areas of root-related desiccation and dissolution features in chalk/soluble rock can exist in discrete localised areas - there can be no certainty that any or all of such features/hazards have been located, sampled or identified. Where a risk is identified the designer should provide appropriate contingencies to mitigate the risk through additional exploratory work and/or an engineered solution.

Where a specific risk of ground dissolution features has been identified in our Report (anything above a 'low' risk rating), reference should be made to the local building control to establish whether there are any specific local requirements for foundation design and appropriate allowances should be incorporated into the design. If such a risk assessment was not within the scope of our investigation and where it is deemed that the ground sequence may give rise to such a risk (for example near-surface chalk strata) it is recommended that an appropriate assessment should be undertaken prior to design of foundations.

Where spread foundations are used, we recommend that all excavations are inspected and approved by suitably experienced personnel; appropriate inspection records should be kept. This should also apply to any structures which are in direct contact with the soil where the soil could have a detrimental effect on performance or integrity of the structure.

Ground contamination often exists in small discrete areas - there can be no certainty that any or all such areas have been located, sampled or identified.

The findings and opinions conveyed in this Report may be based on information from a variety of sources such as previous desk studies, investigations or chemical analyses. Soil Consultants Limited cannot and does not provide any guarantee as to the authenticity, accuracy or reliability of such information from third parties; such information has not been independently verified unless stated in our Report. No liability will be accepted for changes to the ground and groundwater conditions which occur post investigation.

Our Report is written in the context of an agreed scope of work between Soil Consultants Ltd and the Client and should not be used in any different context. In light of additional information becoming available, improved practices and changes in legislation, amendment or re-interpretation of the assessment or the Report in part or in whole may be necessary after its original publication.

Unless otherwise stated our investigation does not include an arboricultural survey, asbestos survey, ecological survey or flood risk assessment and these should be deemed to be outside the scope of our investigation.

We will identify tree and plant species if possible, but a suitably qualified arboriculturalist/botanist should be consulted to provide definitive identification.

Where reference to 'topsoil' is made, this should be construed as any turf (if present) plus any obvious organic-rich/humic layer of soil beneath, which may or may not contain roots/rootlets. Unless otherwise requested, we do not provide a detailed description, undertake sampling/testing for classification purposes or provide a specific classification. The thickness of the 'topsoil' identified on our exploratory hole records is indicative only and should not be used for detailed volume or site strip calculations.

STANDARD TERMS OF APPOINTMENT OF SOIL CONSULTANTS LTD FOR GEOTECHNICAL SERVICES

1 Unless previously withdrawn, our offer remains valid for a period of sixty days from date of offer. If an instruction is given after the sixty days we reserve the right to reasonably adjust any cost associated with the project to reflect any variance on the original offer. In placing an instruction to proceed with exploratory work, whether directly from the Client or Client's representative, the Client is deemed to have accepted our Terms of Appointment.

2 Our offer is on the basis that free, unhindered access and working conditions are available and that the investigation can be completed in one visit, if applicable. Delays beyond our control will incur additional charges. If additional works outside our offer are required to facilitate the investigation these will be advised and any costs will be passed on to the Client.

3 In our quotation we will provide an estimate of any mobilisation period following an instruction to proceed. This estimate will be accurate at the time of quotation, but it should be noted that the mobilisation period may vary at a later date due to factors such as sub-contractor availability and workload.

4 In commissioning this work, the Client has a responsibility for the health, safety and welfare of operatives invited to undertake work on their site. The Client shall indemnify us in respect of any failure to fulfil their obligations in connection with all relevant and current Health and Safety Regulations.

5 The methods of investigation used have been chosen taking into account the constraints of the site including but not limited to access, space and budgetary limitations. Where it has not been possible to reasonably use an EC7 compliant investigation technique, or where a non-compliant technique has been specified, we will adopt practical and appropriate techniques to obtain indicative soil parameters.

6 Unless otherwise stated, our Report should be construed as being a Ground Investigation Report (GIR) as defined in BS EN1997-2. Our Report is not intended to be and should not be viewed or treated as a Geotechnical Design Report (GDR) as defined in BS EN1997-2. Any interpretation which is provided is for guidance only and must not be regarded as design or design recommendation.

7 Where excavation is required as part of the exploratory work, the Client shall provide drawings or plans showing accurate and complete locations of all underground services and structures. In performing our service, we shall take reasonable precautions to avoid damage to underground services or structures. We will not be responsible for any damage caused to underground services or structures and will not be liable for any claims for damage, expenses arising or losses unless the location of all underground services or structures are accurately shown on drawings and those plans have been provided to us in good time prior to commencement of the exploratory work. Risk to the Client can be further reduced by undertaking a scan of the site using a specialist underground scanning service which would be intended to identify traceable services at shallow depth.

8 With some sites, especially those in certain areas of London and other large towns and cities, there may be a risk of unexploded ordnance (UXO) being present. Unless otherwise stated our offer is on the basis that the Client or their representative provides a preliminary UXO risk assessment for the site. It should be noted that if the site is deemed to be in an area of risk then further measures will be required. These would normally comprise either a more detailed risk assessment and/or specialist site attendance by an EOD engineer. These measures can be commissioned either by the Client or Soil Consultants Ltd. If the Client requires, we would be pleased to obtain a preliminary risk assessment at cost+10%.

9 The Client will supply a site plan (to a rational scale), an indication of the scope and type of the proposed development and an indication of any relevant structural loading information.

10 Should the Client terminate the contract after instruction, we reserve the right to recover costs associated to work carried out between the time of instruction and the point of termination. Cancellation fees, and material costs shall be charged at cost plus 20% (+VAT). Engineer/technician time shall be charged at £95+VAT per hour and principal consultant/director time shall be charged at £125+VAT per hour.

11 The Report is issued on the condition that Soil Consultants Ltd will under no circumstances be liable for any loss arising directly or indirectly from ground conditions between the exploratory points which differ from those identified during the investigation. In addition Soil Consultants Ltd will not be liable for any loss arising directly or indirectly from any opinion given on the possible configuration of strata both between the exploratory points and/or below the maximum depth of the investigation; such opinions, where given, are for guidance only and no liability can be accepted as to their accuracy. The results of any measurements taken may vary spatially or with time and further confirmatory measurements should be made after any significant delay in using this Report.

12 We will provide an indication of the strata configuration within the site based upon exploratory holes undertaken. Any strata boundaries shown will relate to the principal layers but it should be noted that these boundaries could be gradational and the depths identified would then not be definitive. The boundary depths/levels are given for guidance only.

13 If and when instructed, an agreed number of contamination tests will be carried out to give an outline assessment of potential contaminants. In some circumstances it may be necessary to recommend further monitoring, contamination testing and assessment and the scope of this work would be agreed with the Client. Notwithstanding this additional scope, local regulatory authorities may have specific requirements which need to be addressed. Unless otherwise agreed or stated our reporting will constitute neither a Quantitative Risk Assessment nor a Remediation Statement or Strategy.

14 Our reports are counter-checked by one of our suitably qualified and experienced engineers/geologists.

15 Notwithstanding anything to the contrary contained in these terms, our liability under or in connection with these terms whether in contract or in tort, in negligence, for breach of statutory duty or otherwise (other than in respect of personal injury or death) shall not exceed the sum equivalent to ten times our contract fee or £100,000 whichever is less in the aggregate for geotechnical and environmental matters unless otherwise agreed.

16 Without prejudice to any other exclusion or limitation of liability, damages, loss, expense or costs our liability for any claim or claims under this agreement be further limited to such sum as it would be just and equitable for us to pay having regard to the extent of our responsibility for the loss or damage giving rise to such claim or claims ("the loss and damage") and on the assumptions that:

(a) All other consultants, contractors, sub-contractors, project managers or advisers engaged in connection with the Project have provided contractual undertakings to the Client on terms no less onerous than those set out in the original contracts in respect of the carrying out of their obligations in connection with the Project; and

(b) There are no exclusions of or limitations of liability nor joint insurance or co-insurance provisions between the Client and any other party referred to in this clause and any such other party who is responsible to any extent for the loss and damage is contractually liable to the Client for the loss and damage; and

(c) All such other consultants, contractors, sub-contractors, project managers or advisers have paid to the Client such proportion of the loss or damage which it would be just and equitable for them to pay having regard to the extent of their responsibility for the loss and damage.

17 Further and notwithstanding anything to the contrary contained in this agreement and without prejudice to any provision in this agreement whereby liability is excluded or limited to a lesser amount, our liability under or in connection with this agreement whether in contract or in tort, in negligence, for breach of statutory duty or otherwise for any claim shall not exceed the amount, if any, recoverable by us by way of indemnity against the claim in question under professional indemnity insurance taken out by us and in force at the time that the claims or (if earlier) circumstances that may give rise to the claim is or are reported to the insurers in question. The limitation shall not apply if no such amount is recoverable due to us having been in breach of our obligations or the terms of any insurance maintained in accordance therewith or having failed to report any such claim or circumstances to the Insurers in question timeously.

18 Whilst our investigation may include asbestos screening/quantification on selected samples, this must not be deemed to constitute a full asbestos survey or be taken as sufficient to definitively identify the presence or quantity of asbestos within or on the ground. We will not accept responsibility if asbestos is encountered during any subsequent construction or development works and in placing a contract with us the Client accepts this condition. Where the fabric of a building is to be disturbed, the Client shall provide an appropriate asbestos survey to us prior to exploratory work and make adequate provision to allow the implementation of sufficient and appropriate protective/remedial measures for the work to progress safely.

19 Where our report refers to 'topsoil', this should be construed as any turf (if present) plus any obvious organic rich/humic layer of soil beneath, which may or may not contain roots/rootlets. Unless otherwise requested, we do not provide a detailed description, undertake sampling/testing for classification purposes or provide a specific classification. The thickness of the 'topsoil' identified on our exploratory hole records is indicative only and should not be used for detailed volume or site strip calculations; if this type of classification is required, this should be identified to us at an early stage and the method of sampling, testing and classification agreed.

20 The Client agrees that they shall not bring any claim personally against any director/employee of Soil Consultants Ltd or consultant to us in respect of loss or damage suffered by the Client arising out of this contract.

21 Our appointment shall be under simple agreement and our liability under this contract or in tort shall be for a period of six years from date of appointment.

22 Our reports are non-assignable and are prepared for the benefit of the Client. No reliance can be assumed by others without written agreement from Soil Consultants Ltd. We will provide a letter of reliance at our discretion and this will be subject to payment of our fee, which will be 10% of contract value, subject to a minimum fee of £1,250 plus VAT. The terms of our letter of reliance are non-negotiable and the beneficiary should be aware that the information shall only apply to the scheme for which the report was originally produced and the original rights and benefits will apply.

23 A VAT invoice (at current rate) will be presented in respect of the work undertaken. Payment of our account is to be made within twenty-eight days of issue of our invoice unless otherwise agreed. On no account shall payment be on a 'pay-when-paid' basis. The information contained within our report remains the property of Soil Consultants Ltd and no reliance may be assumed by any party with an interest in the project until payment has been received in full. After one calendar month interest shall be chargeable at 10% above the Bank of England Rate and compensation claimed in accordance with 'Late Payments of Commercial Debts (Interest) Act 1998 and subsequent revisions. If the debt is referred to a debt collection agency then we have the right to recover associated fees under the terms of our contract.

APPENDIX

Fieldwork, in-situ testing and monitoring

- Foreword
- Standard Penetration Test results
- SPT hammer calibration certificates
- Window sample borehole records

Ground profiles

- Plot of SPT 'N' value versus depth
- Hand vane profile versus depth

Plans, drawings & photographs

- Site Plan
- Location Plan

FOREWORD FOR DYNAMIC SAMPLER BOREHOLES (WINDOWLESS) - GUIDANCE NOTES

GENERAL

The borehole records are compiled from the driller's description of the strata encountered, an examination of the samples by our geotechnical engineer and the results of in-situ and laboratory tests. Based on these data, the report presents an opinion on the configuration of strata within the site. However, such reasonable assumptions are given for guidance only and no liability can be accepted for changes in conditions not revealed by the boreholes.

BORING METHODS

The dynamic sampler technique uses 1m long tubes containing a rigid plastic liner. These are driven into the ground by a falling hammer, then withdrawn and the liner removed. The borehole commences using a large diameter tube (usually 100mm) with each succeeding tube reducing usually by 10mm in diameter to assist the extraction of the tube from the ground. Thus, it is theoretically possible to obtain a total continuous sample of the soil for examination or testing. Casing can be utilised as required. The technique allows the ground conditions to be reasonably well established although disturbance of the ground is inevitable, particularly some "softening" of the upper zone of clay immediately beneath a granular soil. The presence of thin layers of different soils within a stratum may not always be detected.

GROUND WATER

The depth at which ground water was struck is entered on the borehole records. However, this observation may not indicate the true water level at that time. Due to the speed of boring and the relatively small diameter of the borehole, natural ground water may be present at a depth higher than the water strike. Moreover, ground water levels are subject to variations caused by changes in the local drainage conditions and by seasonal effects. When a moderate inflow of water does take place, boring is suspended for at least 10 minutes to enable a more accurate short-term water level to be achieved. An estimate of the rate of inflow is also given. This is a relative term and serves only as a guide to the probable flow of water into an excavation.

Further observations of the water level made during the progress of the borehole are shown including end of shift and overnight readings and the depth at which water was sealed off by the borehole casing, if applicable.

SAMPLES

Small disturbed samples can be recovered from the lining tubes for subsequent laboratory testing, including moisture content, index property tests and contamination analyses.

IN-SITU TESTING

Standard Penetration Test (SPT): this test is performed in accordance with the procedure given in BS EN ISO 22476-3:2005. The individual blow count record for each test is given on a separate table. The 'N' value is normally the number of blows to achieve a penetration of 0.3m following a seating distance of 0.15m and is quoted at the mid-depth of the test zone. However if a change of stratum occurs within the test zone then a revised 'N' value can be calculated to assess one layer in particular. In hard strata full penetration may not be obtained. The presence of groundwater and particularly Where groundwater can affect the test and the measured values may not represent the true in-situ density of the soil.

Hand Shear Vane: provides the shear strength of cohesive soils, values reported in kPa

Pocket Penetrometer: provides an estimate of the unconfined compression strength, values reported in kg/cm^2

Dear Alex,

Re: Possible impact of tree removal relating to proposals for the Mallinson Sports Centre and creation of a Flood Storage Basin at Highgate School

The Tree Removal Plan attached shows tree removals proposed as part of this project.

A group of trees will be removed to create a flood storage basin. The closest tree to properties on Broadlands Road is 59m from the closest house and 16m from a tennis court. At this distance there is no possibility of tree removals having any adverse effect on the properties.

Two trees on Bishopswood Road and a small cherry on Broadlands Road will be removed. With the roads separating the trees from adjacent properties, there is no possibility of tree removals having any adverse effect on the properties, which in any case are owned by the school rather than third parties.

If you require any further information, please get in touch.

Yours sincerely,

Simon Stephens

Glossary of Terms

- +CC - Return period inclusive for the predicted effects of Climate Change
- 1D - One-Dimensional
- 2D - Two-Dimensional
- AMAX - A series containing the peak flows recorded at a gauge from each year
- AOD - Above Ordnance Datum (0m sea level, Newlyn, UK)
- Channel Cross Section - profile view of a river channel, normally obtained by surveying a line across the watercourse
- Critical Storm - A storm that produces peak run off in the watershed
- Culvert - A device used to channel water, similar to a pipe though may be larger
- Defended - A scenario in which river defences are used
- FEH - Flood Estimation Handbook
- Fluvial - Referring to the processes associated with rivers and streams
- FRA - Flood Risk Assessment
- GIS - Geographic Information System
- Hydraulic Model - The mathematical process of analysing the interaction of water and the connected environment
- Hydrology - The calculation of catchment based flow rates
- Inflow - Source of water within a modelled domain
- FMP Software - One-Dimensional hydraulic model – Representation of watercourses
- FMP-TUFLOW - Hydraulic program that dynamically links FMP and TUFLOW (1D-2D)
- LiDAR - Light Detection And Ranging, remote sensing technology to measure distance typically used to obtain topographic data over a large area
- Outflow - The method by which water may leave a modelled area
- Overtopping - Where water has passed over a feature that might ordinarily prevent flow
- f100 - 1% annual probability fluvial event
- f1000 - 0.1% annual probability fluvial event
- f100CC - 1% annual probability fluvial event with an allowance for the predicted effects of climate change
- QMED - The median of the set of annual maximum flow data (AMAX)
- TUFLOW Software - Two-Dimensional hydraulic model – Representation of floodplain
- Undefended - A scenario in which river defences are ignored

1 Introduction

1.1 General

Edenvale Young Associates Ltd. were commissioned by Capital Projects to undertake a Flood Risk Assessment (FRA) in order to support the planning application relating to the Mallinson Sports Centre development in Highgate as shown in Figures 1.1 and 1.2.

The aim of the FRA is to assess the Pre and Post-development flood risk, explain the strategy for mitigating flood risk and not increase the flood risk to others. The scope of the FRA includes:

- Discussion on the the development proposals.
- A review of published data and mapping on Flood risk.
- National Planning Policy Framework (NPPF).
- A review of the Strategic Flood Risk Assessment for the area.
- Evaluation of Finished floor levels (FFLs).
- Analysis of third party impacts.
- Hydraulic modelling to evaluate the impact of climate change.
- Hydraulic modelling to evaluate Finished Floor Levels.
- The drainage strategy for the site

This flood risk assessment uses information from:

- The 'Haringey Council Strategic Flood Risk Assessment' (Level 2) (SFRA), 2015, JBA consulting
- 'London Borough of Haringey surface water management plan (SWMP)', 2011, Capita Symonds
- Flood map for planning online[1].

[1] https://flood-map-for-planning.service.gov.uk/

Other sources, when used, are referenced appropriately.

Hydraulic modelling to determine surface water flood risks has been undertaken using an ESTRY-TUFLOW direct rainfall hydraulic model. The model has been run for Pre and Post development scenarios for the 1 in 100 year (1% AEP), 1 in 100 year (1% AEP) with an allowance of 40% climate change on rainfall.

Figure 1.1: Location

1.2 Appendices

The FRA should be read in conjunction with the following Appendices:

- Appendix A – Topographic Survey
- Appendix B – SWMP 1 in 100 year event + climate change flood depth map
- Appendix C – Mapping from the SWMP showing sewer flooding incidents in Haringey
- Appendix D – Mapping from the SWMP showing groundwater flooding incidents in Haringey

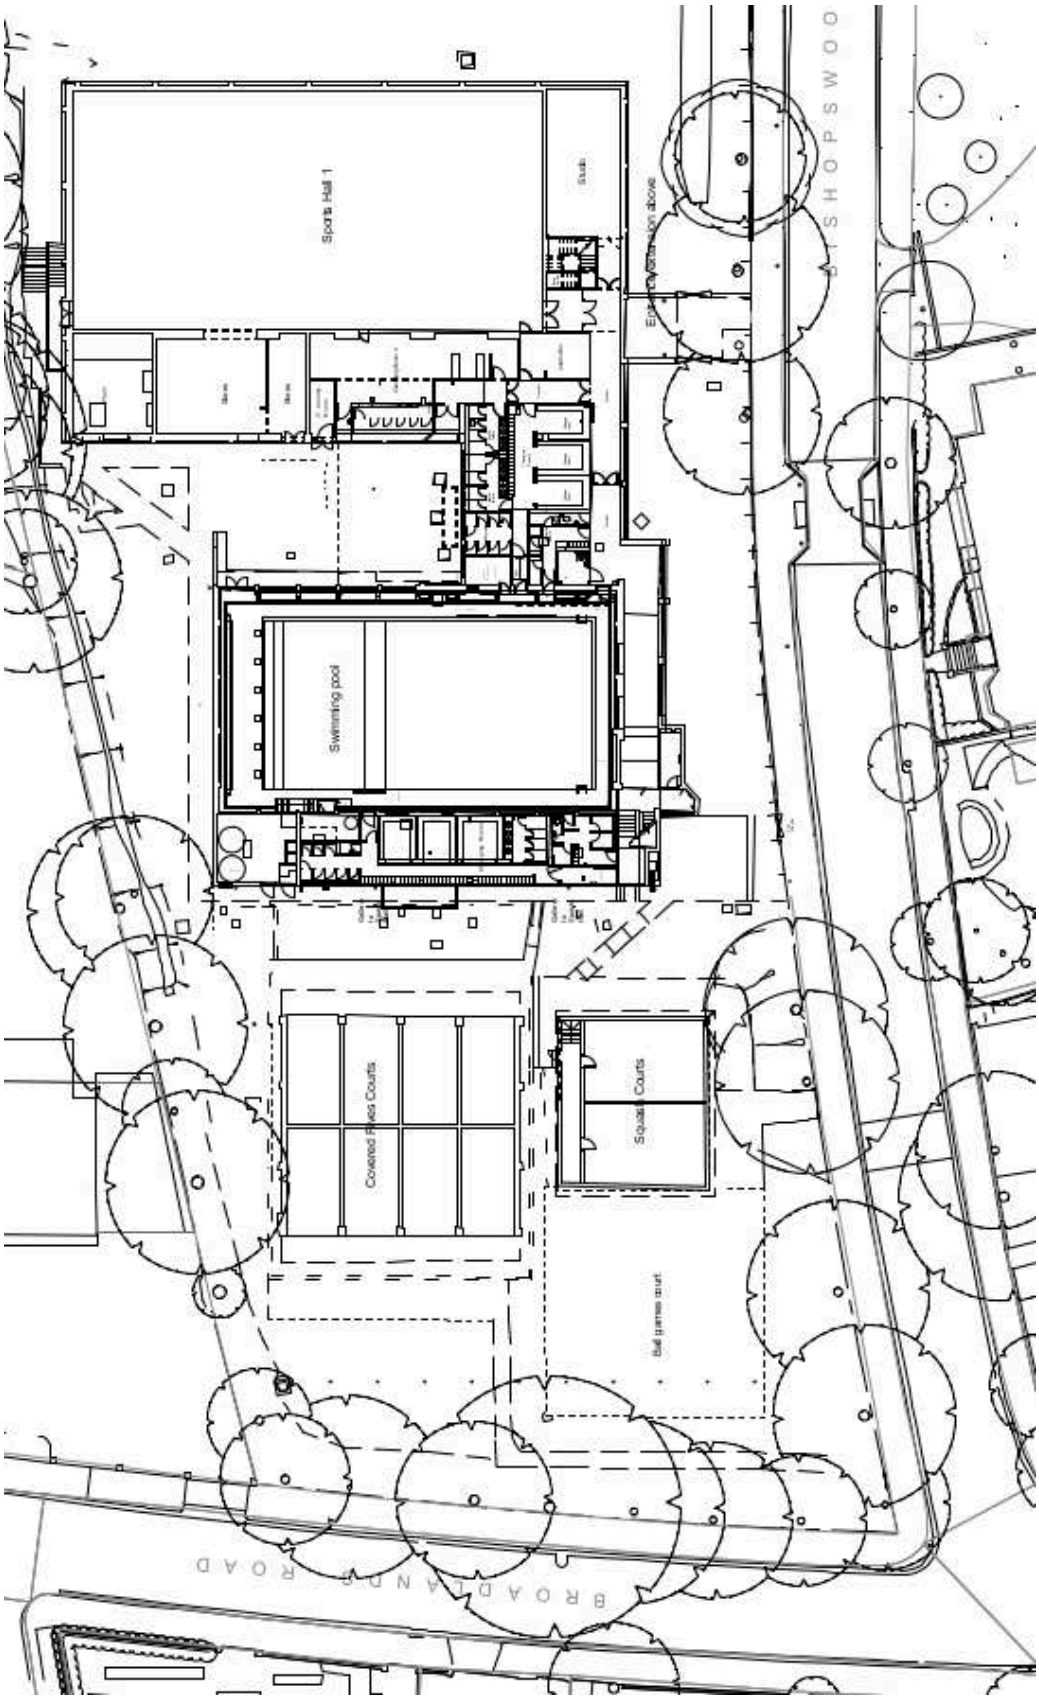

Figure 1.2: Existing Site Layout

2 Development Proposals

The proposed works comprises the development of a new sports hall adjacent to Broadlands Road and extension to the existing building to the south. The scope of development is shown in Figure 2.1. For a detailed description of the proposed development please refer to the Planning Statement. Proposals to mitigate the risk of surface water flooding to the site includes a flood retention basin to the east of the Mallinson Sports Centre and improvement works to existing swales within the site (see Figures 2.4 to 2.7 to ensure the functionality of the scheme.

Levels with in the new development have been set to mitigate the risk of internal flooding to the building based on the results of the hydraulic modelling which is discussed later in this document. The Sports Centre will be tanked and protected by a high threshold at the entrance to the building. The tanking will be concealed by the outer skin of brickwork of the insulated cavity construction. In addition, ground levels between Broadlands Road and the Sports Centre will be set to 106.00mAOD. There is a proposed extra gully to help drain this area.

The proposed levels are summarised in Table 2.1.

Location	m AOD
Northern entrance threshold to Sports Hall	107.00
Window sills	107.00
Tanking to all the walls from lower basement	107.00
Reception and offices	106.15
Sports hall	103.45
Ground levels between Broadlands Road and MSC	106.00
Retention basin invert	107.00
Retention crest	109.50

Table 2.1: Development Levels

The existing site layout is shown in Figure 2.2. Surface water flows across the site in north-westerly direction towards Broadlands Road where it discharges into an existing Thames Water Sewer which runs along the road before turning northwards (See Appendix A). Further details of surface water flood risk are found in Section 4.2.3.

The proposed drainage layout is shown in Figure 2.3. The retention basin which is shown in PJCE's drawing (L2834-PJC-XX-GR-DR-C-700 01) connects to the existing but improved ditches to the east and discharges into an exiting Thames Water surface water sewer which flows north towards Broadlands Road. The attenuation basin has been designed and position to:

- Take into account the root of existing trees in the Orchard area of the site and thus minimise the damage to the trees in the area.
- Remain generally dry and form a recreational area for students..
- Accommodate the storage volume associated with a 1 in 100 year rainfall event in conjunction with a 40% climate change rainfall event.
- Accommodate exceedance flows through the inclusion of a lowered spillway which discharges into the existing ditch. The spillway will comprise a reinforced grass embankment to ensure the geotechnical stability of the embankment during an overtopping event.

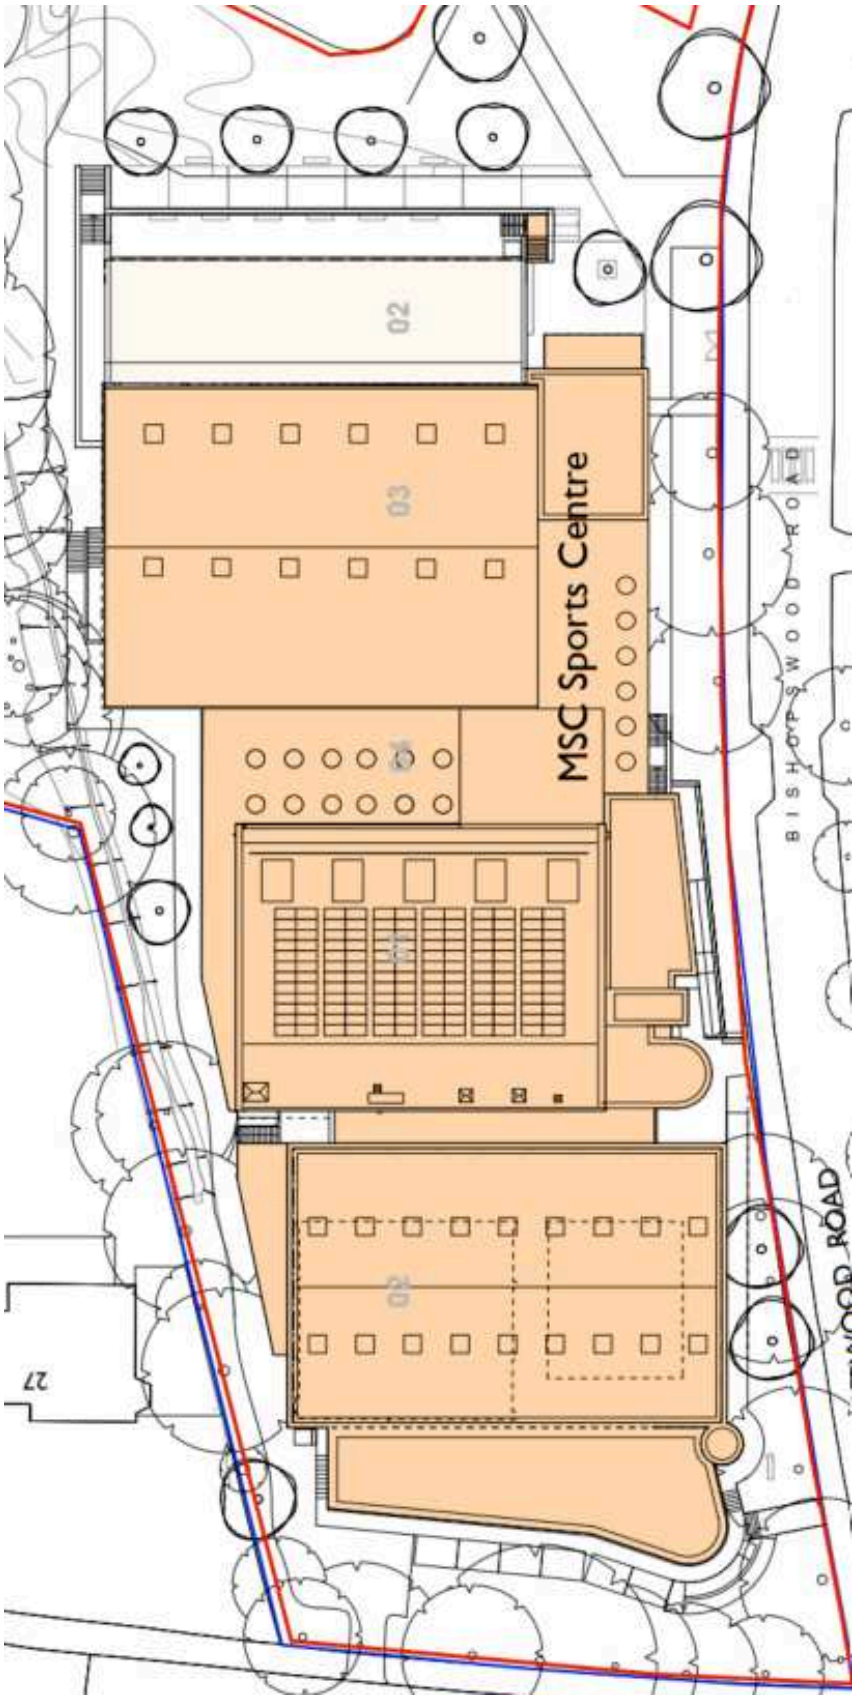

Figure 2.1: Proposed Mallinson Sports Centre

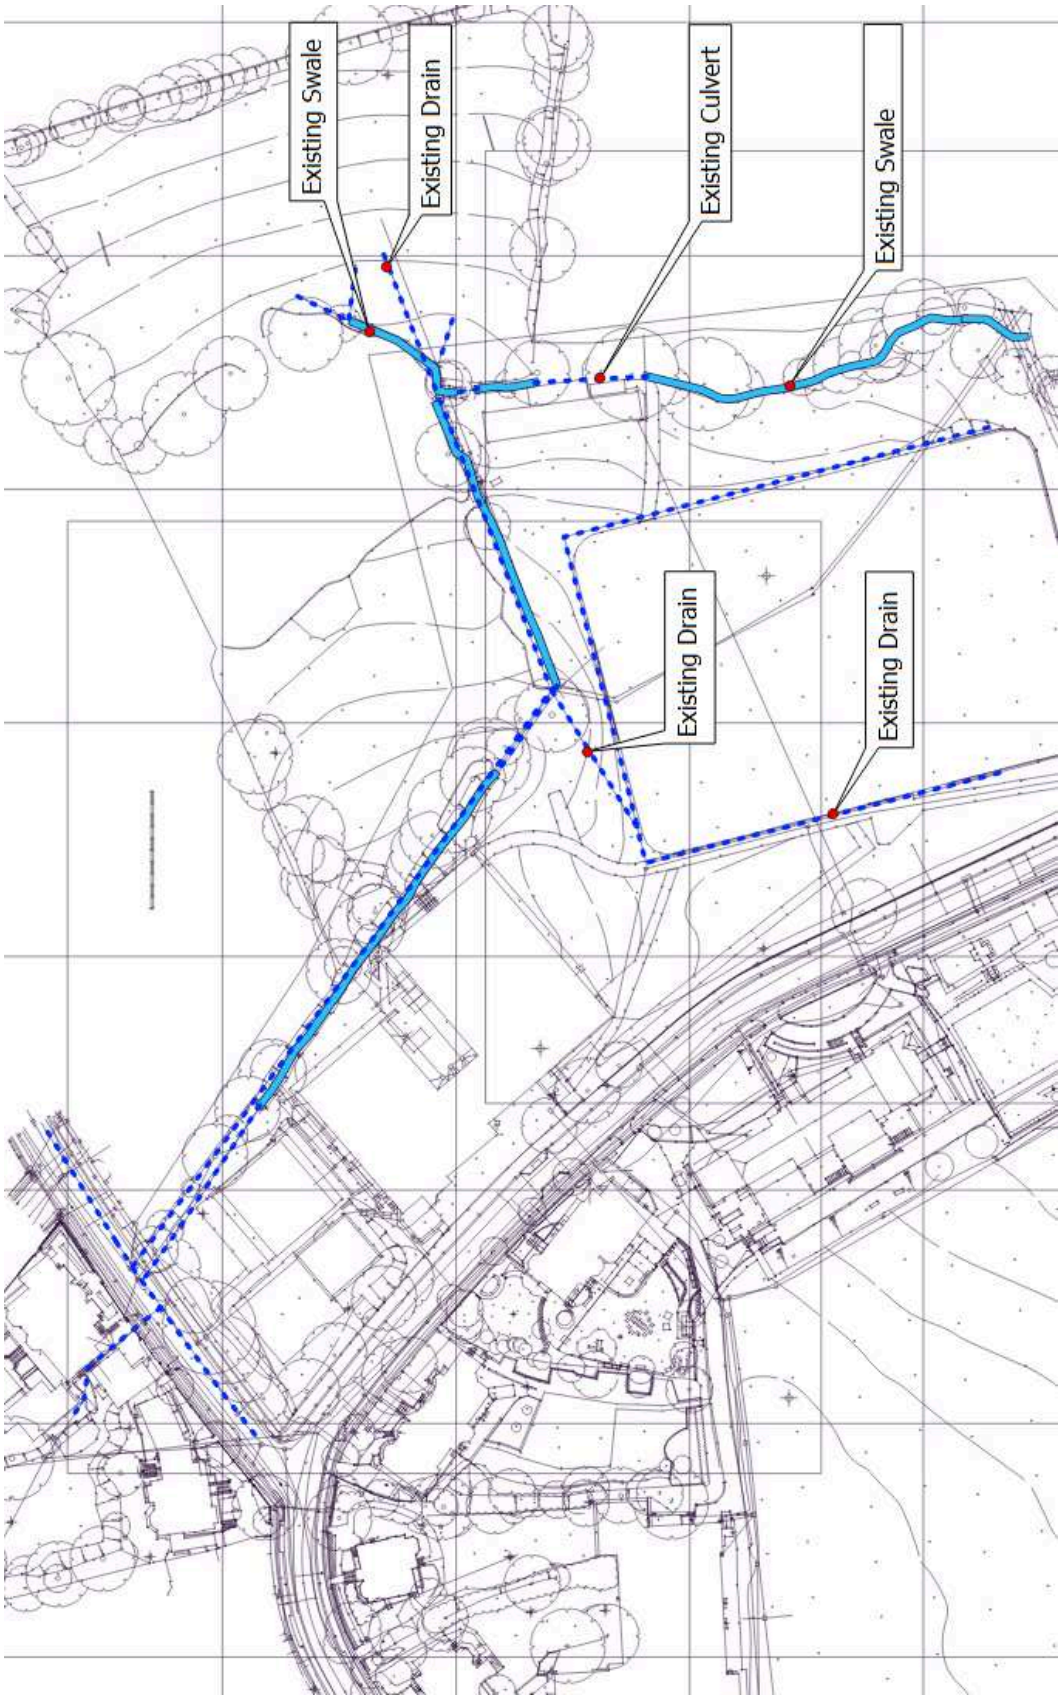

Figure 2.2: Existing Drainage Layout

3 Planning Policy

3.1 National Planning Policy

3.1.1 Introduction

The National Planning Policy Framework (NPPF) clauses 159 to 169 details the policy associated with flooding with clause 161 giving the sequential, risk-based approach for managing flood risk. This includes:

- Sequential Testing - Clause 162
- Exception Testing - Clauses 163 to 165

These issues are discussed in more detail in subsequent sections.

3.1.2 The Sequential Test

The NPPF Sequential Test is used to, where possible, steer development to sites at a lesser risk of flooding. Given that the development site is located in the current EA flood zone 1, it does not apply to this development.

3.1.3 The Exception Test

Table 3 of the Flood Risk and Coastal Change Guidance (reproduced as Table 3.1) shows whether a particular type of development (i.e vulnerability) is compatible with the flood zone in which it is located. As noted above, the is located in Flood Zone 1 and considered to be ". Table 3 confirms that:

- development is appropriate development in Flood Zone 1.
- There is no requirement for an Exception Test.

Flood Zone	Essential Infrastruct	Highly Vulnerable	More Vulnerable	Less Vulnerable	Water Comp Vulnerable
Zone 1	Yes	Yes	Yes	Yes	Yes
Zone 2	Yes	Exception Test	Yes	Yes	Yes
Zone 3a	Exception Test	No	Exception Test	Yes	Yes
Zone 3b	Exception Test*	No	No	No	Yes*

Table 3.1: Flood Zone and Vulnerability Compatibility

3.1.4 Climate Change

Table 1 of the The Technical Guidance for Flood Risk Assessments - Climate Change Allowances gives the rainfall climate change allowances applicable to the development. Table 3.2 gives the climate change allowances for rainfall:

Climate Change Allowance	Percentage
Central 2070s	25%
Upper End 2070s	40%

Table 3.2: Climate Change Allowances for Rainfall

3.2 Strategic Flood Risk Assessment

3.2.1 Overview

A Level 2 Strategic Flood Risk Assessment (SFRA) for Haringey Council was completed in February 2015, to refine information of the probability of flooding, taking other various sources of flooding and the impacts of climate change into account. The over-arching principles (Section 9.1), that all proposed developments should follow according to the SFRA are outlined below:

- *"In line with the NPPF guidance and evidence from the LB of Haringey Level 2 SFRA development proposals should:*
- *show development not at risk of flooding or is compatible with the residual risk;*
- *not increase flood risk elsewhere, taking into account the impacts of climate change;*
- *not increase surface water peak flow rates or runoff volumes above green field levels including an allowance for climate change, as this would result in an increased flood risk to the receiving catchments;*
- *not increase the risk of groundwater flooding elsewhere or change the hydrogeological regime of the area;*
- *the location of basement development should be carefully considered within the LB of Haringey and attention should be paid to all sources of flood risk early within the planning process for new development (including the impact of potential future subterranean works that fall under permitted development);*
- *wherever possible use the opportunities offered by new development to reduce flood risk within the site and elsewhere; and*
- *ensure that where new development is necessary in areas of flood risk (in exceptional circumstances); it is made safe from flooding for the lifetime of the development, taking into account the impacts of climate change. This includes consideration of the potential effect of residual risks."*

3.2.2 Finished Floor Levels

There are no recommendations for finished floor levels in either the SFRA or SWMP. As discussed above 3, surface water flooding is the governing flood risk to the site. However, as guidelines for surface water are not mentioned in the standing advice, finished levels have been based on providing freeboard to the 1 in 100 year + 40% climate change.

3.2.3 Sustainable Drainage Systems (SuDS)

Further requirements are that:

- Surface water discharge from proposed development sites should mimic that of a present day green field site, up to and including a 1 in 100 year critical storm event including an allowance for climate change. Green field run-off rates should be maintained irrespective of whether the site falls within an area designated as being effected by flood risk from any source.
- It is critical that the on site drainage models should demonstrate that there is no increased flood risk to third parties.
- Use SuDS measures wherever practical and achieve 50% attenuation of undeveloped site's surface water run-off at peak times.

The SFRA also contains suggestions for Highgate School in the form of "Green infrastructure", which would be covered by suitable SuDS measures Figure 3.1.

Figure 3.1: SFRA Recommendation for Highgate School

4 Published Information

4.1 Ordnance Survey Mapping

Historic mapping for Highgate indicates that there are two small watercourse which flow northwards through the site. The first is along the eastern boundary of the school site and this channel still exists as a small ditch. The second originally flowed from the orchard area northwards towards Springfield House. The ditch to the east of the Sports Buildings is potentially the only remaining section of open watercourse.

It unlikely that there were watercress meadows on, or adjacent to, the school site. Watercress requires a constant supply of preferably fresh flowing water, and this is not the case given the small size of the watercourses. The area identified by the Highgate Society as possible watercress pasture (i.e the parallel rows) is more likely to be orchards or nurseries which the 1865 mapping tends to suggest is the case (see Figures 4.1 and 4.2).

Indeed, the 1895, 1914 (see Figure 4.3) and 1938 mapping includes reference a nursery to the south-east of the school. The fact that the area within the school is referred to as the orchard may also be an historical remnant. British History Online (see below) also suggests that the primary agricultural industry in the Highgate was orchards and nurseries.

In 1865, the area around the present-day location of the school was rural with open fields (probably pasture) to the north and the cricket ground to the south (see Figure 4.1). It is well understood principle that urbanisation increases the rate and volume of run-off and reduces infiltration to ground. This is particularly true of the immediate area around the Sports Hall.

To the north and west, the site is bounded by roads which are serviced by a highway drainage network. In addition, there is a culvert under Broardlands Road from the site which conveys water from the ditch to the east of existing buildings to a storm sewer to the north of the highway. The watercourse of which this was originally mapped in 1865 has been lost. In addition, there are buildings, fences and walls which all have an impact on surface water run-off and infiltration.

British History Online

"At Highgate a nursery which had existed in 1804 became that of William Cutbush; in 1881 the firm had 4 a. at Highgate, where it remained until 1918, 20 a. at Barnet, and 7 a. at Finchley. (fn. 114) A nursery in Wightman Road, Harringay, included a vinery, cucumber- and peach-houses, and glass forcingpits in 1885; it too had gone by 1894. (fn. 115) In 1880 there were at least two other nurseries at Hornsey and four at Highgate (fn. 116) and in 1887 there were 17½ a. of nurseries and orchards. The area shrank from 5 a. of small fruit in 1897 to 1 a. in 1907, (fn. 117) but there were still 4 holdings in 1947, 2 with small areas of glass-houses and 3 with small frames. (fn. 118) In 1887 the local board opened its own nurseries at Irish Corner with 4 glass-houses to supply the isolation hospital and public gardens. (fn. 119) The nurseries had been considerably enlarged by 1963 (fn. 120) and survived in 1976."

4.2 Environment Agency Flood Risk Mapping

4.2.1 Flood Zone Classification

Figure 4.4 show the flood zone classification for the . The mapping has been extracted from the UK Government's flood map for planning[1] and confirms that the development is within Flood Zone 1.

4.2.2 Rivers and Seas

A copy of the "long term flood risk mapping" shown on the UK government website[2] is shown in Figure 4.4. This shows the extent of flooding on the - adjacent to the site. The development is deemed to be at a Low risk of fluvial flooding.

Figure 4.4: Flood Risk for Planning

4.2.3 Surface Water Flood Risk

Surface water flooding occurs following intense rainfall events, when water is unable to infiltrate the ground or cannot discharge to a watercourse. The Environment Agency mapping shows that the site is not at significant risk of surface water flooding. Accordingly it is considered that surface water flood risk is not an issue. It should also be noted that the drainage design for the development is reported elsewhere.

Figures 4.5 to 4.7 show the surface water flood risk to the site which have been downloaded from the UK Government website (https://flood-warning-information.service.gov.uk/long-term-flood-risk). The mapping gives flood depths on the site for high, medium and low risks which are quantified in Table 4.1.

[1] https://flood-map-for-planning.service.gov.uk/
[2] https://flood-warning-information.service.gov.uk/long-term-flood-risk/map

Importantly it should be recognised that the depths shown on the figures reflect the existing surface water flood risk and not surface water flood risk to the proposed sports facilities. The predicted depth of surface water is considered to present a flood risk to the sports facilities which will be raised above the maximum surface water level.

The low risk scenario shows a clear flood route from the south east flowing across the site, where water then appears to pond behind Broadlands Road before spilling over the road. This mapping does not take into account culverts under the road which is the reason why water builds up behind the road causing the flooding show on the figures.

The surface water flood maps presented are very broad scale and it is considered that they do not represent the true nature of flooding to the site. Accordingly site specific hydraulic modelling has been undertaken to determine more accurate flood depths and extents.

Risk	Depth
Low Risk	over 0.9m
Medium Risk	over 0.9m
High Risk	over 0.9m

Table 4.1: Surface Water Flood Depths

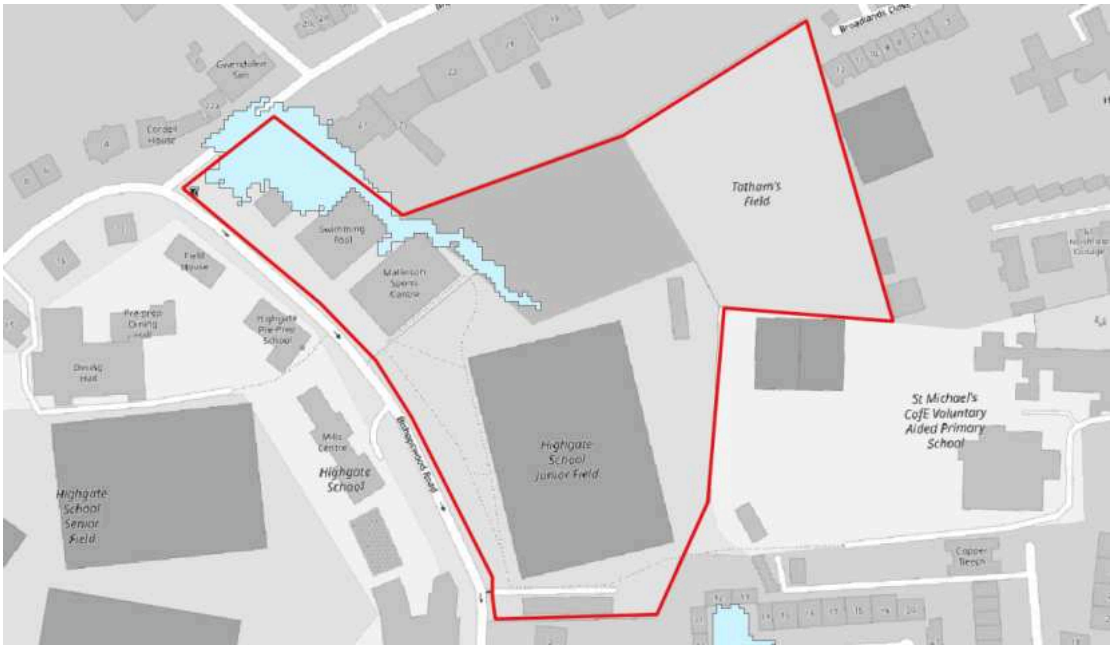

Figure 4.5: Surface Water Flood Risk (High 3.3% AEP)

4.2.4 Reservoirs

A copy of the Reservoir Inundation mapping is shown in Figure 4.8. There are no issues associated with reservoir inundation.

Figure 4.6: Surface Water Flood Risk (Medium 1% AEP)

Figure 4.7: Surface Water Flood Risk (Low 0.1% AEP)

4.2.5 Sewer Flooding

The SWMP mapping (Appendix C) has not identified a specific sewer flooding issue in the vicinity of the site. The area 'N6 4', which the site is located within is recorded as having '1 to 5' sewer flooding records. Other areas within the borough are recorded as having between '21 to 50' sewer flooding records so sewer flooding incidents at our site can be considered low.

However, as the SFRA mapping is very broad scale, it does not offer strong

Figure 4.8: Reservoir Inundation

conclusions regarding risk of flooding from sewers.

4.2.6 Groundwater Flooding

British Geological Survey (BGS) mapping[3] has recorded no superficial deposits. The geology of the Highgate area is characterised by the Claygate Member which overlies the London Clay Formation. The British Geological Survey (BGS) notes that the Claygate Member is a deposit formed by CLAY, silt and sand (please note that the use of capitals follows geotechnical convention to identify the predominant material within a sample of soil). The Claygate Member is a sedimentary bedrock formed between 56 and 47.8 million years ago during the Palaeogene period. It is comprised of dark grey clays with sand laminae, passing up into thin alternations of clays, silts and fine-grained sand, with beds of bioturbated silt.

The British Geological Survey (BGS) possesses a record of boreholes within the UK. According to this record, boreholes (TQ28NE4111, TQ28NE412 and TQ28NE413) are available in the vicinity of the site, approx. 250m away, to the East on Bishopswood Road. The Borehole logs, from 2006, indicate the ground is all clay and remarks include 'water seepages throughout'. Groundwater flooding usually occurs in more permeable strata such as chalk, so the risk for groundwater flooding in clay is considered low.

The SWMP mapping (Appendix D) shows two potential incidents have occurred near to the site. However the disclaimer states that *"Incident records shown are generally unconfirmed and may include issues such as water main bursts or non-groundwater related problems."*

[3] http://mapapps.bgs.ac.uk/geologyofbritain3d/index.html?

The proposed new sports hall is partly below ground level, however with suitable tanking and an entrance threshold level above the potential surface water flood level, this should mitigate some risk of development.

Four boreholes were sunk on the site by Soil Consultants Ltd. Two boreholes (WS1 and WS2 both 5.45m deep) were positioned to the north of the Sports Centre in the area between the existing Fives Court and Broadlands Road. Two further boreholes (WS3 - 5.45m deep and WS4 - 5.0m deep) were sunk to the south of the existing Sports Centre in the area between the all-weather pitches and the existing buildings. Borehole WS3 is approximately 45m from the centre of the Orchard where the attenuation pond will be sited. The borehole logs are included as Annex A.

All boreholes confirm the presence of "Made Ground" (brick concrete etc) overlying CLAY with interstitial silts, gravel and sand. These findings agree with the BGS geological classification of the geological setting; i.e. the Claygate Member. The London Clay Formation was detected in the boreholes at 105m to 106mOD in east of the site falling to approximately 102m AOD to 103m AOD in the west. The finished floor level of the Sports Hall basement will be 103.45m AOD. Accordingly, the excavation for the Sport Hall will be within the Claygate Member but will penetrate into the underlying London Clay Formation.

Water seepage into borehole WS1 and WS2 was noted at approximately 1.0m and 0.3m respectively and the site investigation report also notes that localised shallower inflows were observed in the 2016 trial pits at between 0.90m and 1.20m depth). However, groundwater was not encountered and both boreholes were dry at a depth of 5.45m (100.50m AOD). Similarly, seepage was detected in Boreholes WS3 at 2.2m depth commensurate with a sand 'lense' with groundwater at 3.5m depth (105.75m AOD). No seepage was recorded in WS 4, and groundwater was encountered at approximately 3.0m depth (106m AOD).

However, the presence of silt, sand and gravel within a predominantly clay media indicates that there is significant variation in the underlying ground conditions. Clay has a significantly lower permeability than cohesionless materials and overlying lenses of silt, sand or gravel within the soil matrix will result in perching of water.

The borehole logs confirm the presence of perched water commensurate with bands of silts, sands and gravel. Although there are no boreholes within the footprint of the basement, it is highly likely that the excavation for the basement will encounter lenses of silt, sand or gravel material within the clay matrix which perches water within the Claygate Member. During excavation, perched water will seep into the excavation and dewatering will be required to facilitate construction. The excavation of lenses containing perched water within basement is not considered to be significant in relation to the overall hydrogeological regime or sub-surface flows.

Where groundwater was encountered this was at a depth of 3m to 3.5m (105.75m AOD to 106m AOD). Importantly, it should be recognised that ground water in clay is not subject to rapid fluctuation due to rainfall or seasonal variation due to its low permeability. Given the slow rates of flow within the clay matrix, the absence of groundwater in boreholes WS1 and WS2 and the depth of groundwater in WS3 and WS4, it is highly unlikely that ground water levels and hence flows will be affected by the imposition of the foundations for the Sports Hall. There is no reason to suppose that ground water levels will rise or fall significantly or have an adverse impact at the existing ground level.

The existing level of the orchard is between 108.5m AOD and 109.0m AOD. The invert of the attenuation basin will be set at 107m AOD requiring an excavation of between 1m and 1.5m. On the assumption that borehole WS3 is representative of the ground conditions at the attenuation basin then the invert of the attenuation pond would be within the media described as orange brown and blue grey slightly silty gravelly CLAY / clayey GRAVEL. The borehole log notes that there is seeping water at approximately 107m AOD commensurate with a lens of cohesionless material and seepage into the basin may be possible. However, it must be emphasised that the underlying conditions in the basin may be at variance to WS3 and could be similar to WS4 where gravelly CLAY / clayey GRAVEL was not encountered in the borehole.

The detailed design of the attenuation basin, which will be a condition of planning, has not yet been undertaken and a trail pit / soak away test will be required as part of the detailed design to determine the nature and permeability of the soils within the basin. It is considered that two soakaway tests should be undertaken to a base level of 107m AOD. It is recommended that one test should be at a ground level of 108.5 m AOD and the second at 109m AOD. The soakaway excavation will confirm composition of the soils and the presence of perched water. The results of the soakaway test will be used for the design of the basin, and this will include the need for sub-surface drainage and or lining to ensure that the basin performs satisfactorily so that it can be used for sports and be functional as an occasional drainage basin.

Turning towards the hydrological characteristics of the area, the Highgate Society report refers to the 1865 Ordnance survey mapping. The report notes that the mapping shows the presence of numerous ponds and streams. It is highly likely that ponds were / are clay lined and fed by surface water run-off and shallow springs.

Indeed, the presence of isolated ponds, occasional watercourses, shallow springs and waterlogged ground is entirely consistent with a material dominated by clay incorporating silt, sand and gravel lenses. The mapping for 1896 only identifies two ponds within a radius of approximately 500m of the school but neither of these ponds exists today and have probably been infilled as noted by the Highgate Society report.

In summary:

- The Claygate Member overlying the London Clay Formation is predominantly clay but incorporates silt, sand and gravel lenses. Clay underlying porous material occurring within the Claygate Formation matrix allows water to be held

(or perched) at different levels above groundwater.

- The result of the boreholes sunk within the school grounds is consistent with the Claygate Member.
- The presence of isolated ponds, occasional watercourses, shallow springs and waterlogged ground in the Highgate area is entirely consistent with the underlying geology.
- The hydro-geological setting is not complex but there is local variation in the composition of materials including sand and gravel lenses within the clay matrix.
- The present-day hydrological environment is substantially different to 1865. The site and Highgate in general are serviced by highway drainage and storm sewer network. In addition, there are large areas of impermeable surfaces (roads, drives etc), buildings and walls which all have an impact on surface water run-off and infiltration. Accordingly, the relevance of the historic hydrological setting of 1865 is of limited value.

In conclusion, groundwater flooding at the site is considered a low risk.

5 Hydraulic Modelling Surface Water Flood Risk

5.1 Model Build

5.1.1 Available data

Existing modelling

No pre-existing modelling of this area is available for use, though the area is covered by the Environment Agency surface water flood mapping. A new model has been built from component data with no elements from previous models incorporated.

5.1.2 Elevation data

LiDAR data was obtained from the Environment Agency. For the study area 2m and 1m DTMs were available and 1m resolution was selected.

Topographic survey

Topographic survey was undertaken for the purposes of this study by Randall Surveys in 2016. The survey included information pertaining to surface water sewers, foul sewers and the topography of the site. This survey can be found in Error: Reference source not found.

MasterMap data

Land-use data in vector format was derived from the national coverage provided by Ordnance Survey MasterMap. This was supplied with sufficient coverage for the full model extent. See section 5.3 for further details.

Hydrological data

ReFH2.2 software was used in combination with the FEH web service in order to provide data for hydrological analysis. See section 4 for further details.

5.1.3 Hydrological analysis

Introduction

A hydrological assessment was undertaken for the Highgate catchment surrounding the development site shown in Figure 5.1. The rainfall boundary was set over the entire 2D model area, which has been configured to be larger than the FEH catchment area to ensure that any errors in the delineation of the FEH catchment are excluded.

Storm durations

The rainfall hyetograph shown in Figure 5.2 has been based on gross rainfall derived from the ReFH2 using DDF2013 data. The rainfall hyetograph shown is for the 1 in 10, 1 in 30, 1 in 100, 1 in 1000 as well as the 1 in 100 plus 20% and 40% climate change. Additionally, several storm durations were run, including 3.5 hour (which is the critical storm duration for the catchment), 4.5 hour and 5.5 hour durations (which is the critical storm drainage duration). This approach means that there is explicit representation of both storage and infiltration losses within the hydraulic model.

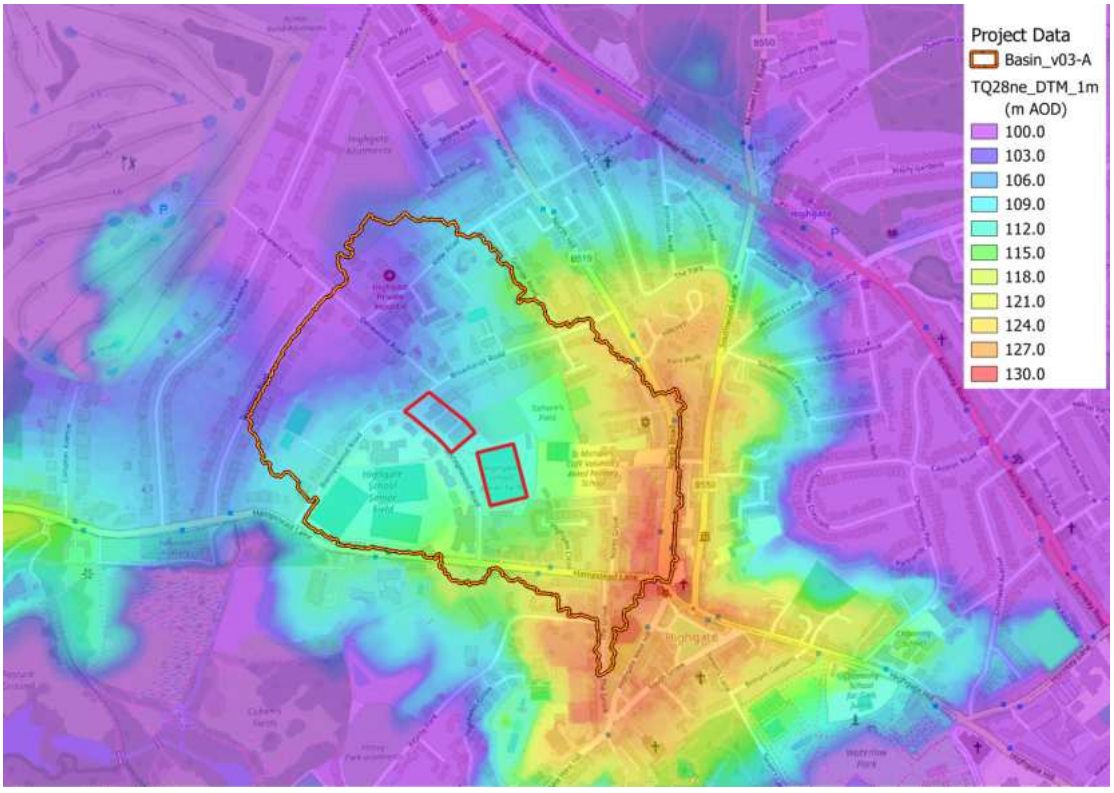

Figure 5.1: Coverage of different land-use classes to be assigned different roughness parameter values

5.1.4 Hydraulic simulation

Software

The scheme was modelled using the widely-adopted TUFLOW HPC software. TUFLOW has been in wide use in the UK for over 20 years and is a stable and extensively tested two-dimensional (2D) modelling package. It incorporates a one-dimensional (1D) model, ESTRY, for the simulation of surface water pipe network.

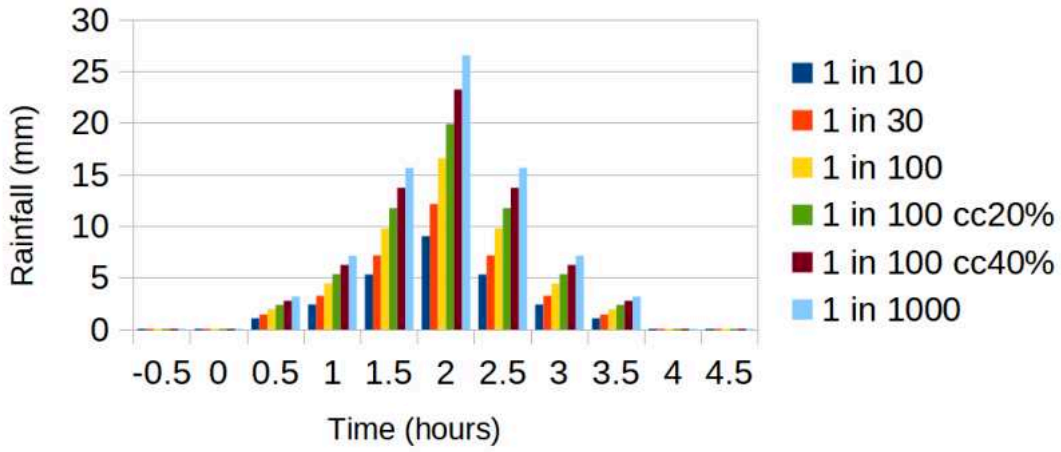

Figure 5.2: Rainfall hyetograph for the 1 in 10yr, 1 in 30yr, 1 in 100yr, 1 in 1000yr, 1 in 100yr plus climate change allowances (20% and 40%) using a 3.5 hour storm duration

The 1D and 2D solvers may be coupled and run simultaneously, exchanging data throughout the simulation, permitting utilisation of the strengths of both 1D (best for channels, structures and pipe networks) and 2D (best for floodplains and complex flood paths). One of the key advantages of the software is its use of standardised and open input and output formats (ASC, SHP, CSV, TXT). This means that model data can be both prepared and inspected/reviewed without a copy of the software and the data can be readily extracted and processed using other, unrelated programs. The latest version of the software was applied, specifically build 2024-03-AC-iSP-w64.

Terrain

The terrain has been represented using the 2D portion of the model, the wider floodplain is split into square elements referred to as 'cells'. The cell size should be small enough to represent flow routes with sufficient detail, however, larger cell sizes are favourable as increases to the number of cells also increases the computational effort in undertaking simulations (halving the cell size results in simulations taking approximately 8 times longer to run).

In this instance a 1m resolution was selected as there are fine detailed features that need representing in 2D and this still permits runs to complete in suitable time. The majority of elevations across the terrain were obtained by inspection of the LiDAR data. Figure 5.1 shows the Extent of LiDAR coverage around the modelled area. LiDAR was sufficiently recent and of sufficient quality that no further refinements were considered necessary.

Surface roughness

Roughness has been spatially assigned using MasterMap data, with different classes (also known as feature codes) being assigned different Manning's n roughness parameters (the industry standard parametrisation of roughness). The values selected are typical values for floodplains in the UK. Figure 5.3 shows the coverage of the different classes, while Table 5.1 below shows the roughness parameters applied to the different classes.

MasterMap class	Description	Manning's 'n' Roughness
10021	Buildings	1
10022	Buildings	1
10053	Land	0.08
10054	Land	0.02
10056	Land	0.05
10062	Buildings	0.1
10089	Water	0.03
10096	Land	0.055
10111	Land	0.1
10172	Roads	0.022
10123	Roads	0.022
10183	Roads	0.04
10193	Structures	0.055
10217	Land	0.08

Table 5.1: Roughness parameters applied to MasterMap classes

Surface permeability

Soils data has been based on the freely available European Soil Database[1]. The Highgate catchment model extent falls under the soil category loam, this soil was specified using TUFLOW default values for the Green-Ampt Infiltration Method.

Surface water drainage

Surface water drainage features are included in this modelling including a pipe network with pits that allow transfer of water from cover levels of manholes to the surface water sewer network beneath. The network is based on the topographic survey. The pipe network has entrance and exit losses applied as recommended within the TUFLOW manual.

Boundary conditions - Inflows and outflows

The rainfall boundary was set over the entire 2D model area, which has been configured to be larger than the FEH catchment area to ensure that any errors in the delineation of the FEH catchment are excluded.

[1] https://esdac.jrc.ec.europa.eu/content/european-soil-database-v20-vector-and-attribute-data

Figure 5.3: Coverage of different land-use classes to be assigned different roughness parameter values

Head/time boundaries have been applied at the downstream extent of both pipe exits that drain to the north west of the catchment in the 1D domain. The elevations of both of these boundaries have been set to be just above the soffit level of the pipes (9803a at 103.83mAOD and 8805 at 103.34mAOD). This allows representation of a full pipe as the downstream boundary condition, in order to provide a conservative estimate of flows on the site.

A head/flow boundary has been applied at the North-western boundary of the catchment to drain the flow as it will continue to flow down the slope. An average gradient was calculated and applied.

Initial conditions

The 2D domain starts completely dry and the 1D downstream water level boundaries have been set so the pipes are full.

Simulation parameters

All simulation parameters have been left at their default values. The model time-step has been set to be 0.5 seconds for the 2D domain and 0.25 seconds for the 1D domain. This is in-line with the TUFLOW manual recommendations on appropriate time-steps (which states that "2D time-step in seconds should be somewhere between 1/2 to 1/5 of the 2D cell size in metres" and the 1D time-step is recommended as being half that of the 2D domain in linked simulations).

Model sensitivity runs

In any modelling exercise there are associated uncertainties. Often it is desirable to calibrate/verify the model to observed data, in order to either refine the selected schematisation/parameters or to demonstrate that they produce reasonable results by showing fit to the observed data.

In this instance there is no observed data to fit for either calibration or verification. Instead, a number of sensitivities have been undertaken in order to assess the impact upon results that selecting different parameters or schematisation might have. It should be stressed that reasonable values and schematisation have been selected in all cases as the baseline case, in line with best practice; however, by adjusting these values a measure of confidence in the outputs might be obtained in the face of uncertainties.

Storm durations

The sensitivities applied in this model are to run different storm durations to see how this impacts upon the results of the model.

5.1.5 Modelled scenarios

Baseline model scenario

The baseline model is a representation of the existing school sports facilities. It includes all the parameters described in sections 4 and 5, with the existing sports centre facilities represented using finished floor levels based on the plan drawings.

Post development model scenario (Mallinson Sports Centre)

The post development model is a representation of the proposed sports facilities and proposed flood mitigation options. The model includes all the parameters with the proposed sports centre facilities represented using finished floor levels based on the architect's drawings (see Table 2.1).

Mitigation measures are shown in Figure 2.3 and includes the flood retention basin to the east of the Mallinson Sports Centre. The retention basin connects to the existing improved ditches to the east and discharges into an exiting ditch and surface water sewer which flows north towards Broadlands Road. In addition, the scheme includes improvement works to swales within the site to ensure the functionality of the drainage. Existing culverts will be jetted to remove site.

The model includes the Sports Centre which will be tanked and protected by a high threshold at the entrance to the building (107.00 m AOD). In addition, ground levels between Broadlands Road and the Sports Centre has been set to 106.00mAOD.

5.1.6 Model strengths and limitations

Strengths

The model has been built in line with current best practice, including undergoing model review. A range of sensitivities on storm duration have been undertaken to

assess the impact of changing such parameters to see if they have any significant effect on model results which could alter the conclusions of the study.

The sensitivity analyses show that storm duration is not a critical issue in terms of evaluating flood depths for the 3.5 hour, 4.5 hour and 5.5 hour. rainfall events. The maximum change in depth in the site of interest is between a 3.5 hour and 5.5 hour simulation is less than 0.1m.

Limitations

The modelling simplifies the schematisation of the sports pitch and excludes the beneficial impact of below ground attenuation. This is considered conservative as it assumes that the flood storage volume is full at the commencement of the design event and has the effect of increasing run-off.

Certain surface water culverts / pipes shown on the topographic survey which are stated as being “assumed connection from records”. As no diameter or invert levels were recorded, the modelling has assumed their diameters as the same as any pipes they are connected to. As an example, modelled pipes SW8805 and SWSTN102d are assumed as being 0.45m in diameter (based on the known connecting pipes), with invert levels based on nearest known inverts.

5.2 Hydraulic Model Results

The hydraulic model has been constructed to assess surface water flooding at the existing sports facilities and for the proposed sports facilities.

Tables 5.2 and 5.3 and Figures 5.6 and 5.7 shows the results of the hydraulic modelling for the pre and post development scenarios associated with a 1 in 100 year rainfall event. Levels and depths are quoted at three key reference points as shown in Figure 5.8. Reference point 1 is at the northern end of the site which currently experiences the deepest depth of flooding within the mode. Reference point 2 is within the retention basin and reference point 3 is on the sports pitches.

The modelling has demonstrated that the retention pond and other mitigation measures are effective at mitigating internal flooding of the school for the 1 in 100 year rainfall event plus 40% climate change allowance design event. The modelling also demonstrates that there is no adverse impact off site, with flood levels within the development area reduced by 0.34m at the northern end of the site. The depth within the retention basin is 1.52m AOD.

- The Mallinson Sports Centre is flood free in the 1 in 100 year design event + 40% climate change.
- There is a reduction in flood level and depth at reference point 1 of 0.34m.
- There is a reduction in flood level and depth to the north of Broadlands Road of approximately 0.15m.

- There is a freeboard of 0.41m to the threshold at the northern entrance of the Mallison Sports Centre to the 1 in 100 year rainfall event plus a 40% allowance for climate change.

6 Conclusions and Recommendations

6.1 Conclusions

Edenvale Young Associates were commissioned by Capital Projects to complete a Flood Risk Assessment for for the construction of the Mallinson Sports Centre. The scope of works has included The FRA has includes an evaluation of published information, desktop analysis and hydraulic modelling to assess flood risk to the site.

The results of the modelling have been used to assess flood risk to the development. This includes consideration of:

- Post development finished floor and threshold levels.
- Pre and post development flood levels to assess third party impacts.

The following conclusions are made from the Flood Risk Assessment undertaken to assess the risk of flooding to the Mallinson Sports Centre redevelopment at Highgate school

- The proposed development lies in Flood Zone 1.
- The main flood risk posed to the site is surface water flooding.
- Other sources of flooding such as infrastructure flooding, surface water flooding and groundwater flooding have been reviewed but are considered low risk.
- Site specific hydraulic modelling has been undertaken as well as modelling of proposed flood mitigation measures.
- The Mallinson Sports Centre is flood free in the 1 in 100 year design event + 40% climate change.
- There is a reduction in flood level and depth at reference point 1 of 0.34m.
- There is a reduction in flood level and depth to the north of Broadlands Road of approximately 0.15m.
- There is a freeboard of 0.41m to the threshold at the northern entrance of the Mallison Sports Centre.

6.2 Recommendations

It is recommended that:

- The door threshold to the Northern entrance to the Sports Hall shall be no less than 107.00m AOD
- The Sports Centre will be tanked to a level be no less than 107.00m AOD.
- Ground levels between Broadlands Road and the Sports Centre will be set to 106.00mAOD.
- An retention basin will be constructed to attenuate surface water run-off from the catchment.
- Flow control on the discharge from the retention basin will be restricted to ensure that the requirements of the SFRA are met.
- Existing ditches and swales will be cleaned and improved to ensure conveyance of syrface water flows through the site.
- Existing culverts and pipes conveying surface water will be cleaned of silt.
- Flood resilience measures should be adopted as part of the sports hall design, it is recommended that;
  - One-way valves should be installed in foul pipework to prevent sewage backing up into the development.
  - Suitable flood doors shall be installed at the entrance to the buildings.

Increased Potential for Elevated Groundwater in

- Permeable Superficial Deposits
- Consolidated Aquifers

Notes

1. The increased Potential for Elevated Groundwater map shows those areas within the London Boroughs where there is an increased potential for groundwater to rise sufficiently to interact with the ground surface or be within 2 m of the ground surface. Such groundwater rise could lead to the following consequences:
   - flooding of basements of buildings below ground level;
   - flooding of buried services or other assets below ground level;
   - inundation of farmland, roads, commercial, residential and amenity areas;
   - flooding of ground floors of buildings above ground level; and
   - overflowing of sewers and drains.
2. Incident records shown are generally unconfirmed and may include issues such as water main bursts or non-groundwater related problems.
3. Areas not shown to have increased potential for elevated groundwater should be considered to have a low potential for elevated groundwater – Lack of information does not imply 'no potential' of elevated groundwater in that area.
4. Includes groundwater flood mapping provided by JBA Consulting. Copyright © Jeremy Benn Associates Limited 2008 - 2011, partially derived from data supplied by the Environment Agency

1. Introduction

A-squared Studio Engineers Limited (A-squared) has been engaged by Pringuer-James Consulting Engineers Limited (PJCE) on behalf of Highgate School to prepare a ground movement assessment (GMA) for the proposed development at Highgate Mallinson Sports Centre, Bishopswood Road, London, N6 4PB.

1.1. Study Aims and Objectives

A ground movement and impact assessment has been carried out in order to estimate the potential damage induced by the proposed redevelopment on the neighbouring properties.

The assessment encompasses properties located within the *zone of influence* of the proposed scheme. The GMA is based on *greenfield* ground movements and *unlikely to be exceeded* ground movements. The adopted assessment methodology provides a robust and conservative assessment representative of current industry best practice, as detailed in Section 4.

The assessment carried out and described herein aims to:

- Assess the impact on ground movements induced by the proposed works on adjacent properties.
- Inform Party Wall awards.
- Provide performance criteria and inform aspects of substructure construction and design.

This report provides a detailed description of the:

- Site and proposed development.
- Modelling parameters and input.
- Analyses and results.

1.2. Information Sources

The principal sources of information, which have informed the assessments presented herein, include the following:

- *Highgate School MSC 4Phase Landscape strategy report* produced by Robert Myers Associates, dated June 2022 (ref. 733.01(RP)0001).
- Loading plans prepared by PJCE, dated February 2024.
- Architectural drawings prepared by Ed Toovey Architects, dated May 2022.

Information available in the public domain:

- British Geological Survey online database (various sources).
- Google Earth.

2. The Site and Proposed Development

2.1. Development Site and Current Site Use

The development site is located at Highgate Mallinson Sports Centre, Bishopswood Road, London, N6 4PB. The approximate National Grid reference for the site is TQ 27797 87754 and the site footprint covers approximately 0.74 hectares. The approximate average ground surface elevation at the site is 109m above Ordnance Datum (mOD) and ground surface levels in the surrounding area generally fall toward the West.

The development site falls within the administrative boundaries of the London Borough of Haringey and currently includes a fives courts building, a pool hall block, squash courts and a sports hall. The area surrounding the site comprises other Highgate School buildings and residential properties. The existing sports hall building is founded on an RC ground-bearing raft system.

Approximate site boundary marked by red line.

Figure 2.1 Location of the proposed development

The proposed development comprises the demolition of the fives courts, squash courts, part of the pool building and areas of hardstanding, construction of a second sports hall in place of the old fives courts and squash courts, and construction of new fives courts adjacent to the existing sports hall. Demolition plans and proposed ground floor plans are presented in Figure 2.2 and Figure 2.3 respectively. The development will be carried out in five phases which are marked on the proposed ground floor plan in Figure 2.3.

Two basements are proposed as part of the development. The first is an approximately 4.0m-deep basement which will form the new fives court (Phase 2A), adjacent to the existing sports hall. The second will form the new sports hall to the North (Phase 2B), directly adjacent to the existing pool hall block and is approximately 3.7m-deep. Both excavations will be supported by contiguous piled walls with internal in-situ RC lining walls, except for the Southern edge of the new fives courts, which will be supported by in-situ RC retaining walls. Both basement areas are proposed to be supported by an RC ground-bearing raft system with tension piles to restrict uplift forces on the basement box in accidental groundwater conditions. A section drawing through the proposed basement is presented in Figure 2.4.

A 1.5m-deep flood storage basin will be constructed to the east of the site which is designed to receive surface water flowing overland from the upstream catchment area. A plan of the wider site showing the location of the sports pitch flood basin in relation to the site is presented in Figure 2.5.

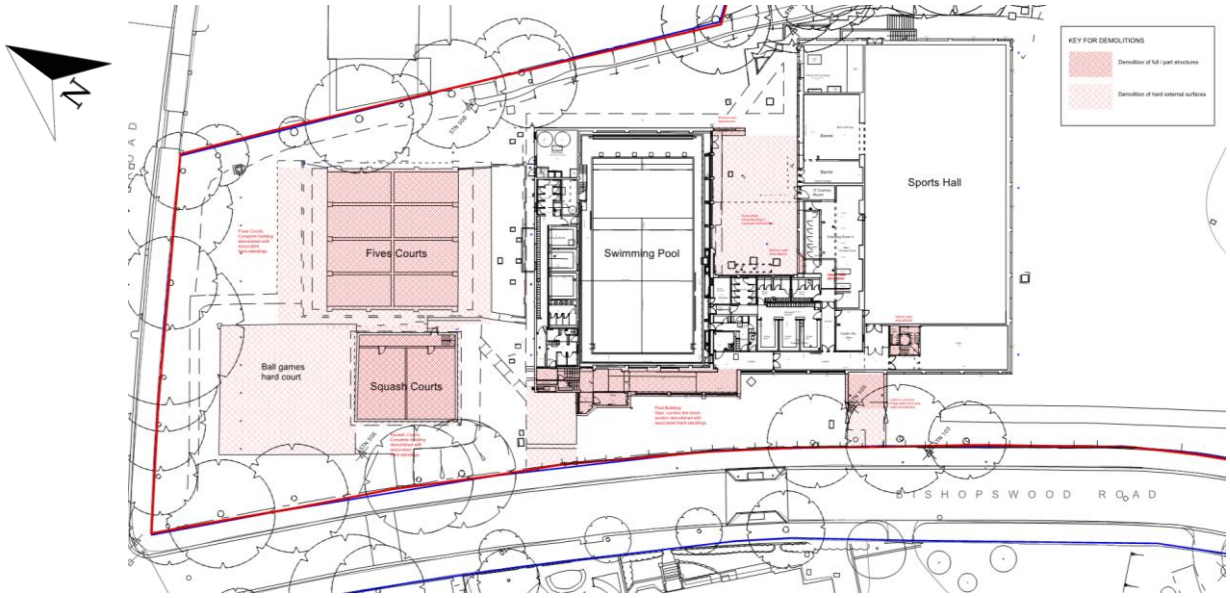

Figure 2.2 Demolition plan

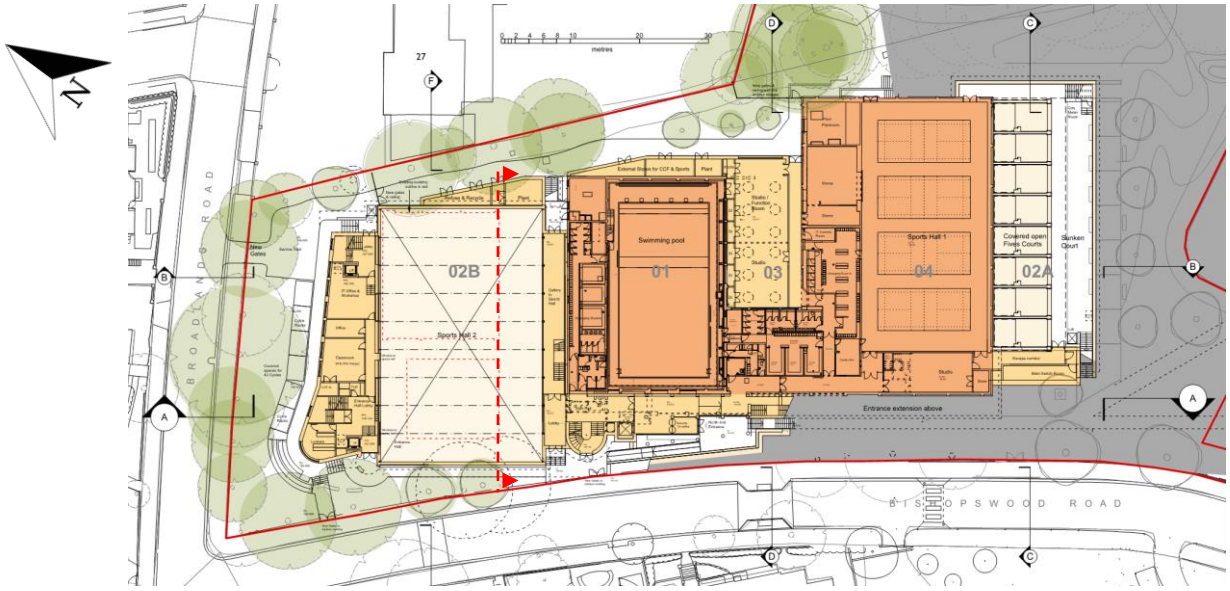

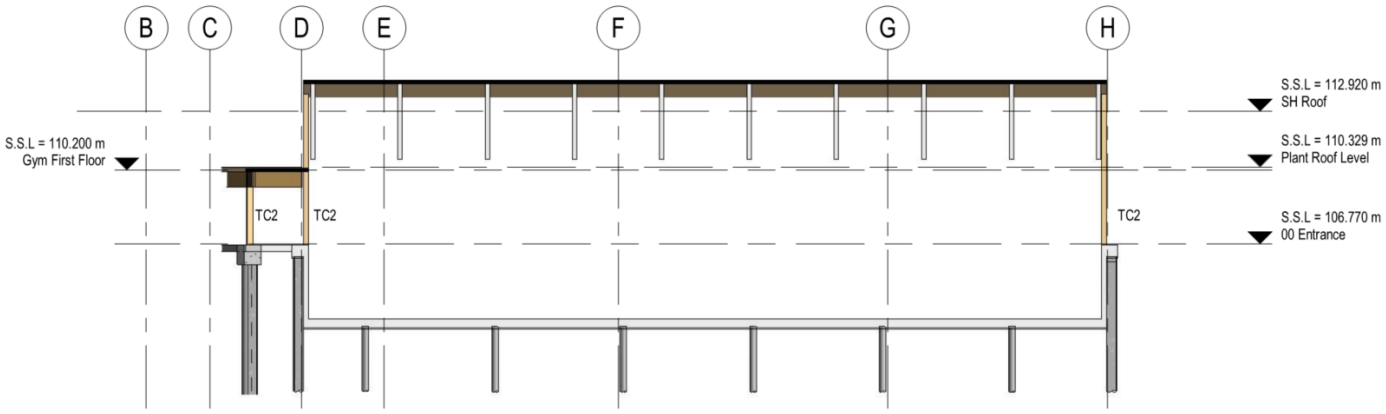

Figure 2.3 Proposed ground floor plan

Section location marked in red in Figure 2.3.

Figure 2.4 Proposed basement section drawing

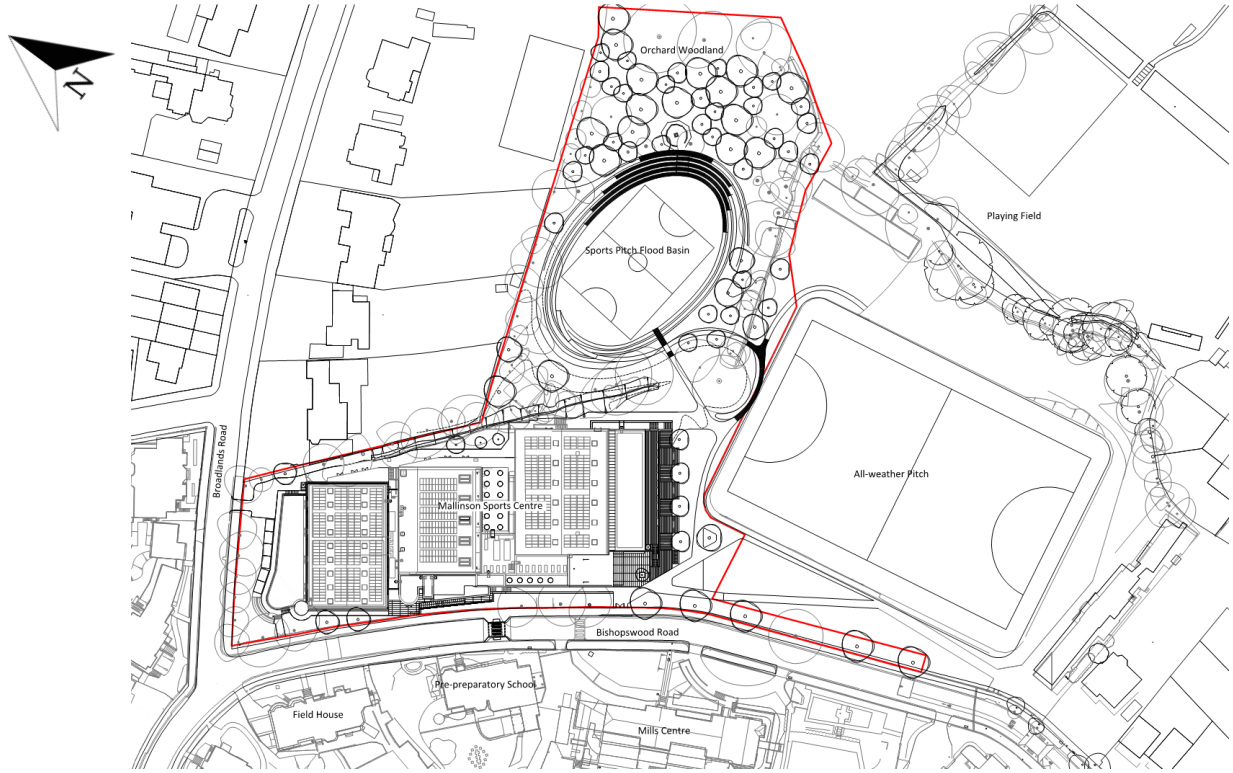

Figure 2.5 Wider site plan

3. Geology

Site-specific ground investigation has been undertaken by Soil Consultants Ltd in four phases. An initial and supplementary phase were undertaken in February 2016 to investigate the ground conditions surrounding the school buildings, followed by a third phase to investigate the conditions of the flood storage basin area in February 2024. No groundwater monitoring was undertaken as part of these phases of GI, so another phase was undertaken which comprised additional boreholes near the school buildings and proposed flood storage basin, with groundwater monitoring included. The data from the investigation has been used to derive a ground model and geotechnical parameters for the site to inform the ground movement assessment. The ground conditions on site were found to comprise the following (in order of succession):

- Made Ground / topsoil
- Head Deposits
- Claygate Member
- London Clay Formation

The ground model and geotechnical parameters have been chosen specifically for the purpose of this GMA. The ground model is presented in Table 3.1.

Table 3.1 Ground model and geotechnical parameters adopted for the ground movement assessment

Stratum	Top of stratum (mOD)	Thickness (m)	Undrained Shear Strength c_u (kPa)	Undrained Young's Modulus, E_u[3][5] (MPa)	Drained Young's Modulus, E'[4] (MPa)
Made Ground	+106.8[1]	0.3	-	-	V: 10.0 H: 10.0
Head Deposits	+106.5	2.1	32.0	V: 16.0 H: 25.6	V: 12.8 H: 20.48
Claygate Member	+104.4	5.1	$32.0 + 17.4z$[6]	V: $16.0 + 8.7z$[6] H: $25.6 + 13.92z$[6]	V: $12.8 + 6.9z$[6] H: $20.48 + 11.14z$[6]
London Clay Formation	+99.3	Unproven	$120.0 + 8.2z$[6]	V: $60.0 + 4.1z$[6] H: $120.0 + 8.2z$[6]	V: $48.0 + 3.3z$[6] H: $96.0 + 6.56z$[6]

1. The ground level adjacent to the proposed basement has been adopted as ground level in the GMA.
2. The ground model and geotechnical parameters have been derived solely for the purposes of this assessment.
3. Vertical undrained Young's Modulus has been derived using the relationship $E_u = 500c_u$.
4. Vertical and horizontal drained Young's Modulus has been derived using the relationship $E' = 0.8E_u$.
5. Horizontal undrained Young's Modulus for the Head Deposits and Claygate Member has been derived using the relationship $E_u = 800c_u$. Horizontal undrained Young's Modulus for the London Clay Formation has been derived using the relationship $E_u = 1000c_u$.
6. z refers to metres below top of stratum.
7. *Rigid boundary* assumed at approximately +34.11mOD for analytical purposes.
8. V: vertical, H: horizontal.

4. Impact Assessment Evaluation

4.1. Assessment Details

The assessment has been undertaken using proprietary spreadsheets and the commercially available software Oasys PDisp and XDisp, which consider the three-dimensional ground movement field induced by the proposed excavation works.

Ground movements will arise as a result of various mechanisms, which are mobilised as part of the construction works for the proposed scheme. The demolition of superstructure elements and excavation process will induce ground movements arising from the overburden removal. The transfer of the building loading to lower strata by the construction of the new superstructure will partially reinstate a portion of the removed overburden, yielding settlements across areas of the foundation system. The induced ground movements will extend over a given zone of influence surrounding the building/basement footprint.

A series of three-dimensional models of the proposed scheme have been developed in Oasys XDisp/PDisp software and combined by means of superposition in order to enable ground movement assessments to be carried out representing the various construction stages. The ground movement displacement fields were separated in two groups (A & B) based on the approach followed, as detailed below:

Group A – Unloading/Loading ground movements

A1. Demolition and excavation (short-term).
A2. Demolition, excavation and building loading (long-term).

Group B – CIRIA-based ground movements

B1. Contiguous pile wall installation and excavation.
B2. Contiguous pile wall installation, excavation and building loading (long-term).

The Group A assessments are based on *greenfield* ground movements evaluated from linear half space (PDisp) analyses and focus on vertical ground movements induced by the unloading/re-loading processes.

The proposed loading pressures have been determined from load take down information provided by PJCE (included in Appendix B) and have been applied as uniformly distributed unloading and loading pressures representative of the demolition, excavation, and building loading as shown in Figure 4.1 and Figure 4.2.

The sports hall excavation has been modelled as an unloading pressure of 75kPa, and the fives court excavation has been modelled as an unloading pressure of 80kPa, applied at the basement formation levels (equating to the removal of 3.7 and 4.0m of soil respectively). The demolition of the existing fives courts and squash courts have been conservatively modelled as an unloading pressure of 24kPa (approximately equal to the demolition of a two-storey building).

The excavation of the flood storage basin has been modelled as an unloading pressure of 30kPa, applied at the base of the excavation. The modelling of this feature has been simplified from its ovular shape to a rectangle, with a breadth and width equal to the maximum breadth and width of the ovular shape.

The Group B assessments adopt the normalised ground displacement curves reported in CIRIA C760 to assess the impact of retention system installation works and the excavation. The following CIRIA C760 normalised ground movement curves were adopted to assess ground movements due to retention system installation and excavation works:

- *Contiguous pile wall installation*: Installation of contiguous pile wall in stiff clay.
- *Sports hall excavation*: Excavation in front of a low stiffness wall in stiff clay.
- *Flood storage basin excavation:* Excavation in front of a low stiffness wall in stiff clay.

An allowance has been made for potential installation of walls or structures to the edges of the flood storage basin by utilising the Installation of planar diaphragm wall in stiff clay CIRIA curve.

A WALLAP analysis of the proposed excavation and retention system has been undertaken and the excavation CIRIA curves have been scaled up to impose the calculated WALLAP wall deflections in XDisp.

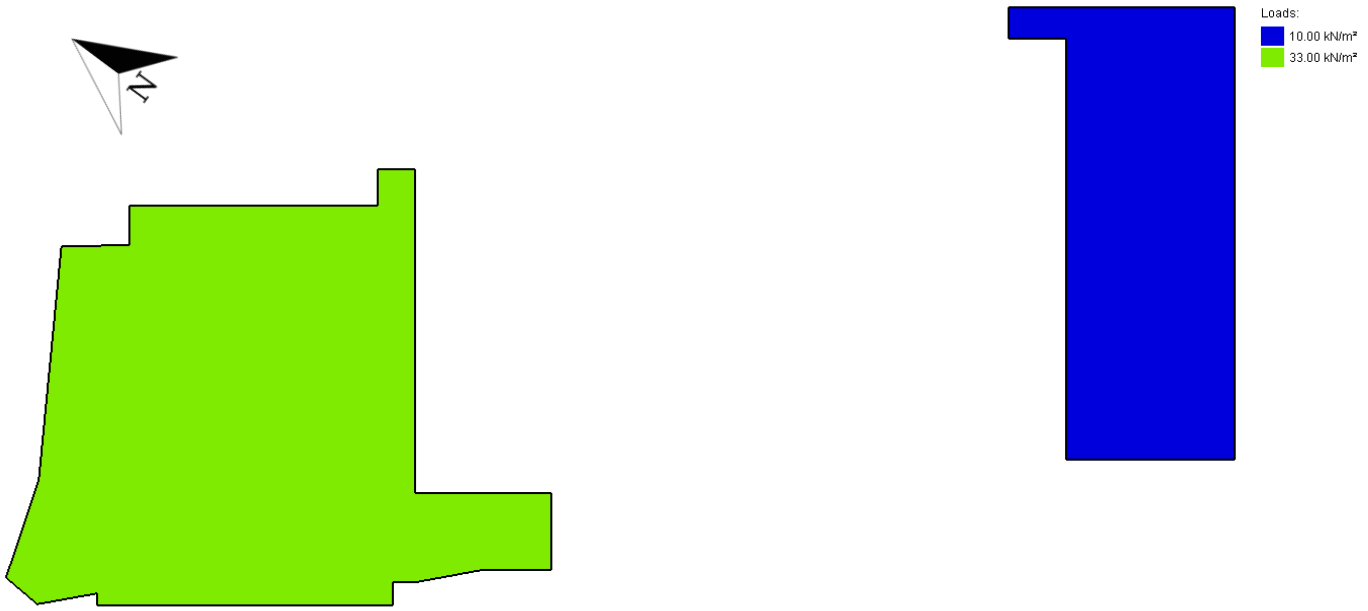

Figure 4.1 Building loading as modelled in PDisp

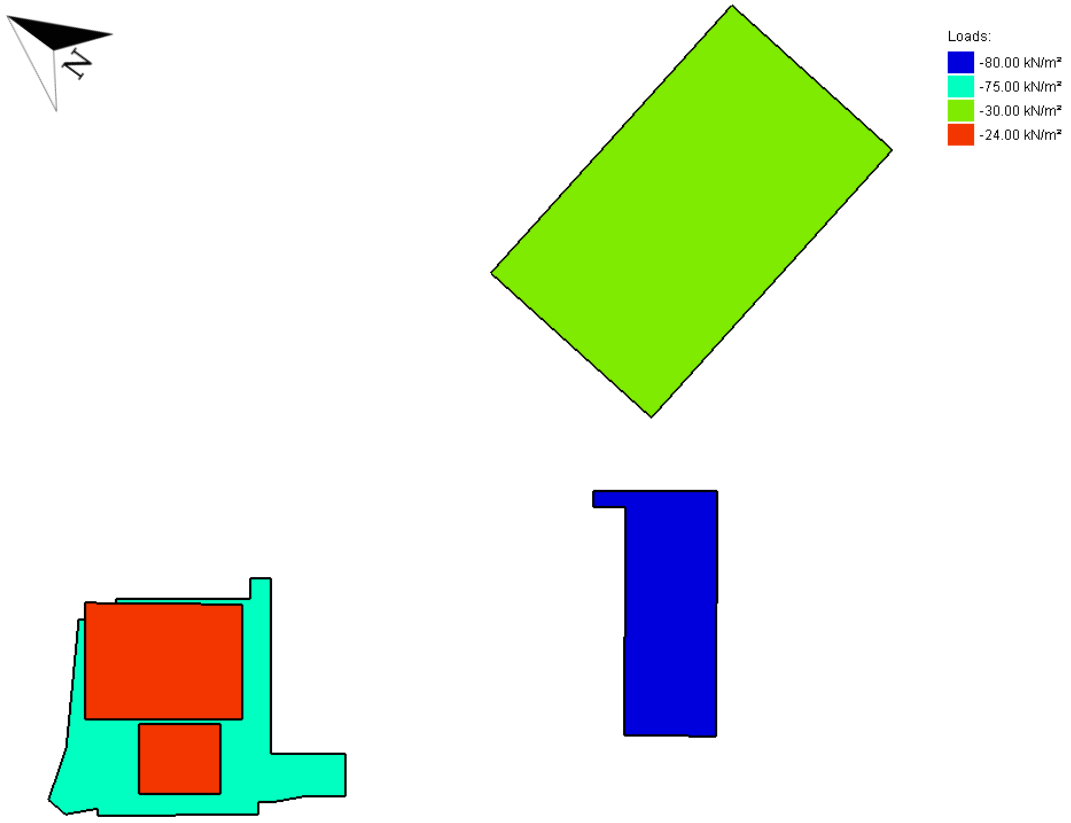

Figure 4.2 Unloading as modelled in PDisp

The two groups of analyses enabled the production of an envelope of damage classification results – with the worst-case results presented herein. A representative geometry has been adopted for defining the excavation/installation geometry implemented in the 3D modelling efforts. An indicative plot of the analytical model is presented below in Figure 4.3, showing the excavation area and the adjacent properties included in the damage assessment.

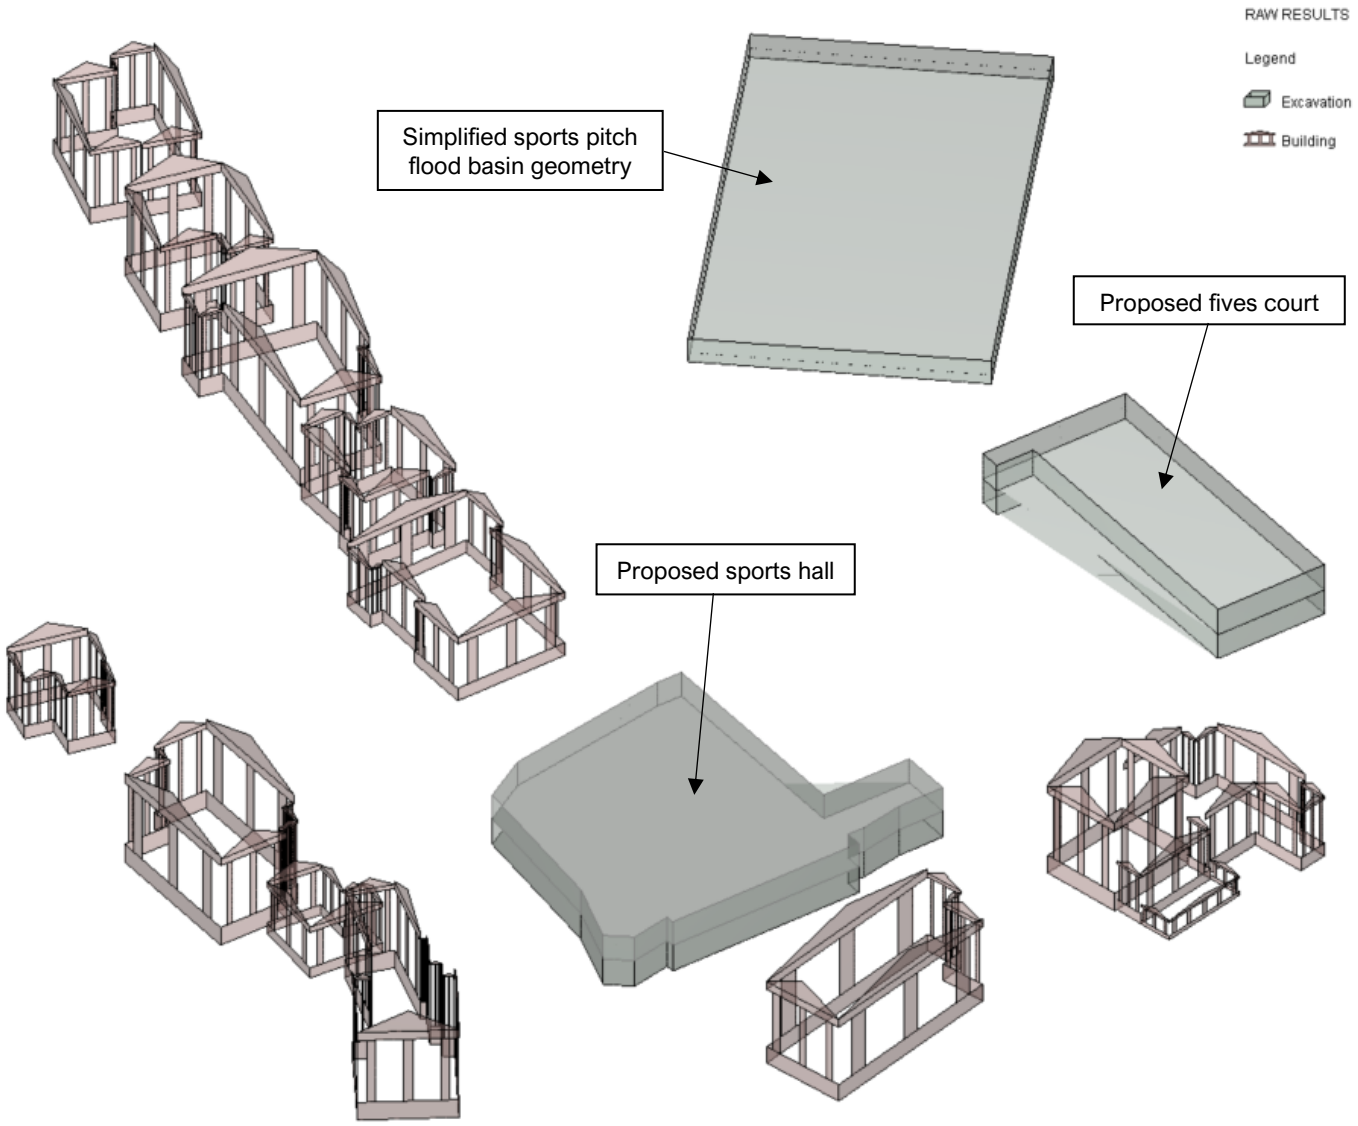

Figure 4.3 Indicative plot of three-dimensional analytical model in XDisp

4.2. Impact Assessment

4.2.1. General

The potential impact/damage induced on primary façade/wall elements of the buildings surrounding the proposed scheme have been evaluated on the basis of the calculated ground movement fields. The masonry walls of concern are shown in Appendix A, including the wall nomenclature/reference system adopted. The arrangement is based on the currently available survey information and presents an array of masonry façades running both perpendicular and parallel to the proposed basement (covering the key

deformation mechanisms). The façades of the neighbouring buildings considered for the current study are grouped in the following manner:

- 19.BLR: 19 Broadlands Road
- 20c.BLR: 20c Broadlands Road
- 21.BLR: 21 Broadlands Road
- 22.BLR: 22 Broadlands Road
- 22a.BLR: 22a Broadlands Road
- 23.BLR: 23 Broadlands Road
- 24.BLR: 24 Broadlands Road
- 25.BLR: 25 Broadlands Road
- 27.BLR: 27 Broadlands Road
- FH: Field House
- PP.Sch: PrePrep School
- GH: Grindal House

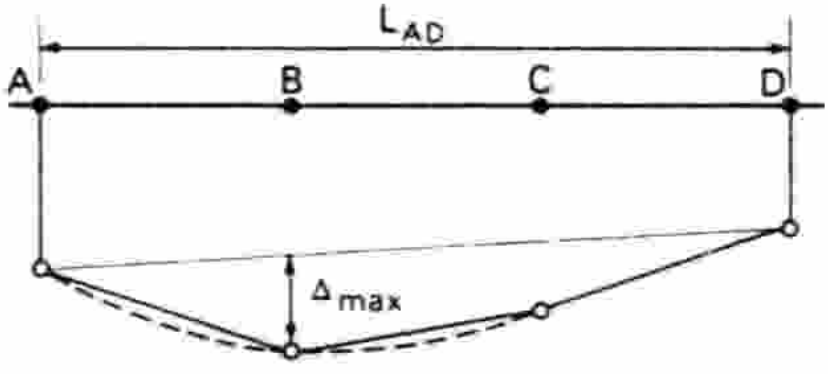
Each wall has been assumed to behave as an equivalent beam subject to a bending and extension/compression deformation mechanism, based on the evaluated greenfield ground movement, as outlined previously.

Tensile strains induced within the building masonry walls have been evaluated based on the deflection ratios Δ/L and horizontal extension mechanisms estimated from the analyses. The assessment considers the well-established Burland (1997) damage classification method, as presented and summarised in Figure 4.4 and Figure 4.5. This method involves a relatively simple but robust means of assessment, which is widely adopted and is considered to comprise an industry standard/best practice basis for impact assessments of this typology.

Potential damage categories are directly related to the tensile strains induced by the proposed construction stages, arising from a combination of direct tension, and bending induced tension mechanisms. The evaluated damage categories correspond to an *unlikely to be exceeded* scenario (on the basis of the data sets adopted and greenfield assumptions).

Category of damage	Description of typical damage (ease of repair is underlined)	Approximate crack width (mm)	Limiting tensile strain ε_{lim} (per cent)
0 Negligible	Hairline cracks of less than about 0.1 mm are classed as negligible.	< 0.1	0.0–0.05
1 Very slight	Fine cracks that can easily be treated during normal decoration. Perhaps isolated slight fracture in building. Cracks in external brickwork visible on inspection.	< 1	0.05–0.075
2 Slight	Cracks easily filled. Redecoration probably required. Several slight fractures showing inside of building. Cracks are visible externally and some repointing may be required externally to ensure weathertightness. Doors and windows may stick slightly.	< 5	0.075–0.15
3 Moderate	The cracks require some opening up and can be patched by a mason. Recurrent cracks can be masked by suitable linings. Repointing of external brickwork and possibly a small amount of brickwork to be replaced. Doors and windows sticking. Service pipes may fracture. Weathertightness often impaired.	5–15 or a number of cracks > 3	0.15–0.3
4 Severe	Extensive repair work involving breaking-out and replacing sections of walls, especially over doors and windows. Windows and frames distorted, floor sloping noticeably. Walls leaning or bulging noticeably, some loss of bearing in beams. Service pipes disrupted.	15–25 but also depends on number of cracks	> 0.3
5 Very severe	This requires a major repair involving partial or complete rebuilding. Beams lose bearings, walls lean badly and require shoring. Windows broken with distortion. Danger of instability.	usually > 25 but depends on number of cracks.	

Figure 4.4 Building damage classification, after Burland et al. 1977, Boscardin and Cording 1989 and Burland 2001 - relationship between category of damage and limiting strain ε_{limx}



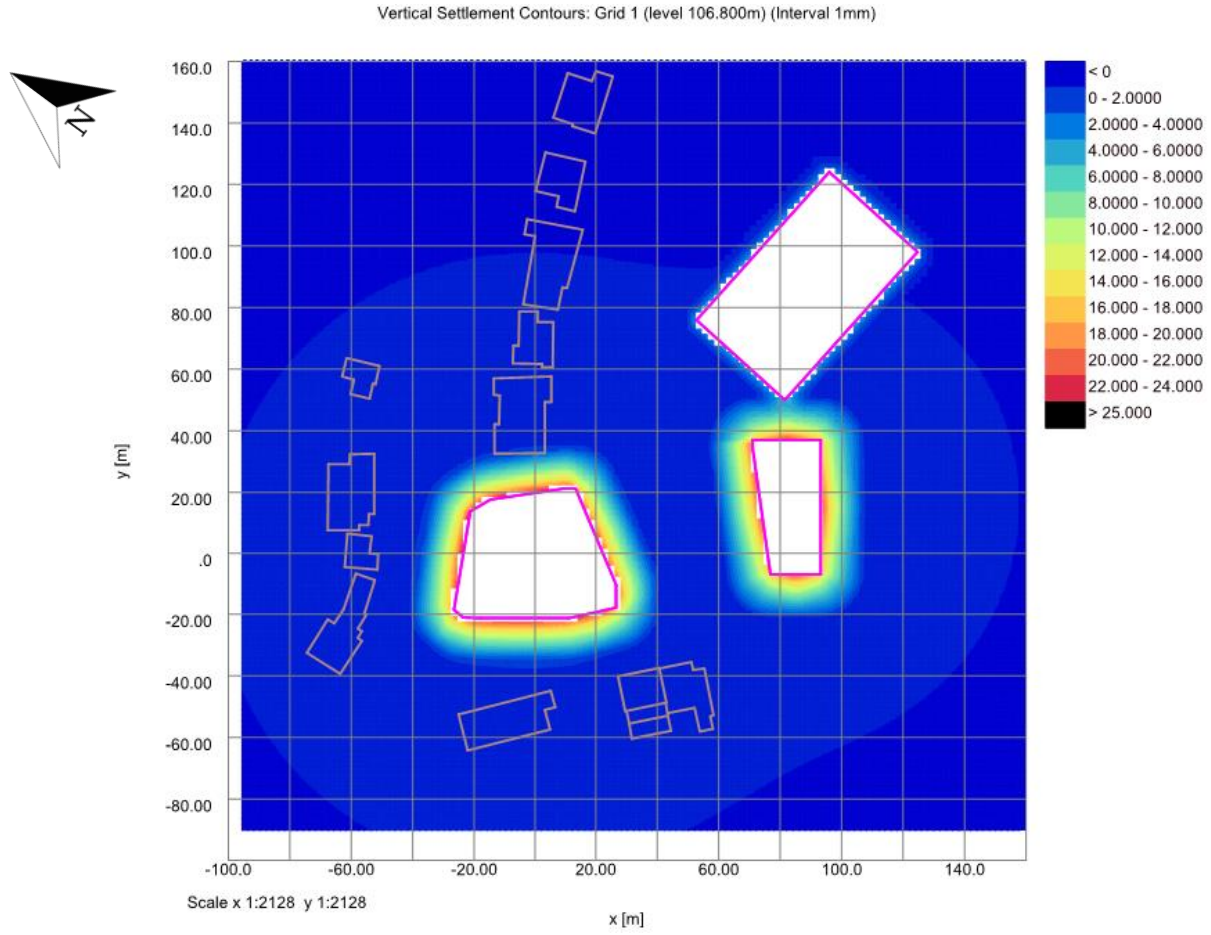


Figure 4.5 Definition of relative deflection Δ and deflection ratio Δ/L

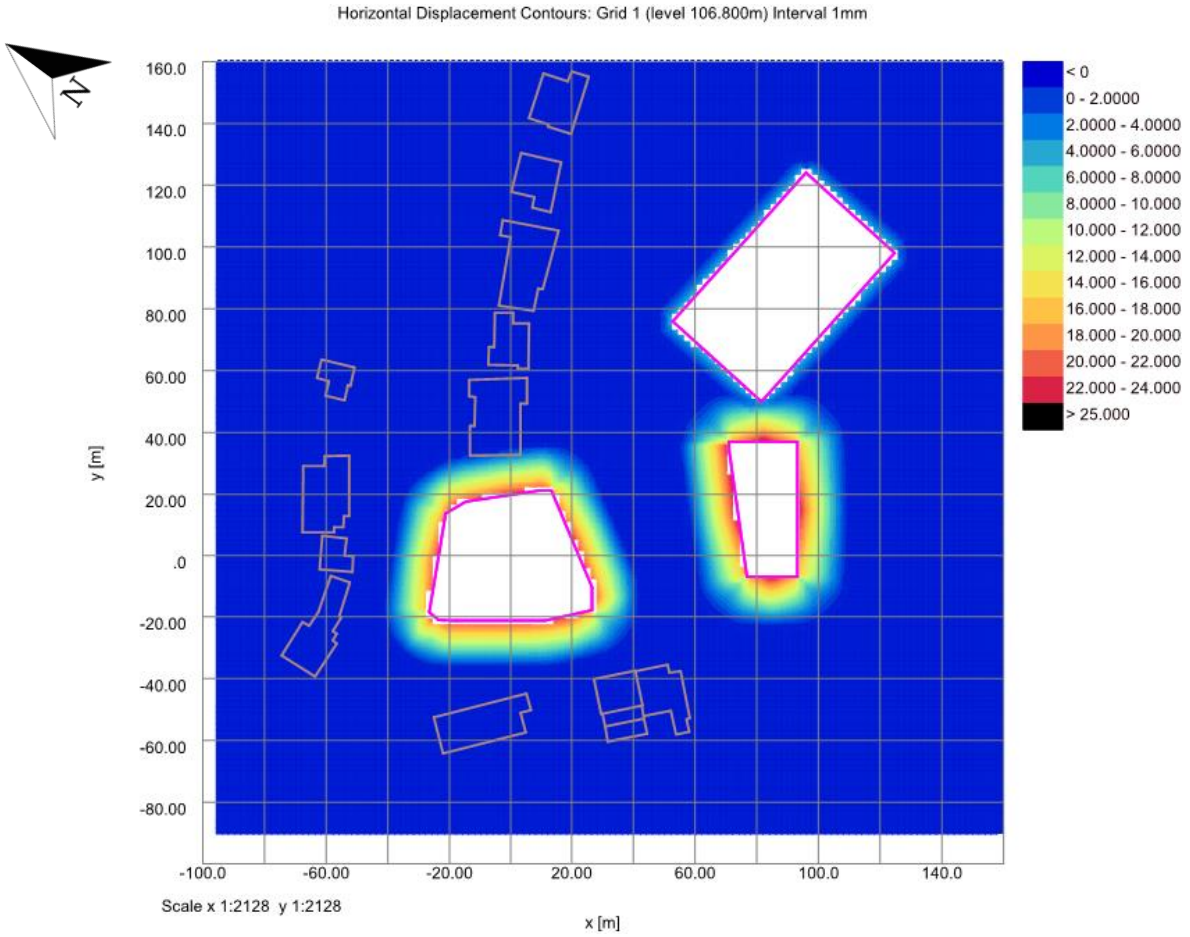
5. Ground Movement Assessment



5.1. Façade Damage Categories

The results of the analysis indicate that the damage to all facades will be Category 0 (Negligible) or less, other than 27.BLR.4, which will be Category 1 (Very Slight) in scenarios B1 and B2. Figure 5.1 and Figure 5.2 depict the vertical and horizontal displacements, respectively, from analysis scenario B2 which represents the maximum ground movements.

Sports hall excavation has been simplified to avoid doubling up of CIRIA curves and to give a more accurate representation of ground movement.

Figure 5.1 Vertical settlement plot from scenario B2

Sports hall excavation has been simplified to avoid doubling up of CIRIA curves and to give a more accurate representation of ground movement.

Figure 5.2 Horizontal settlement plot from scenario B2

5.2. Impact on Adjacent Roads and Highways

An assessment of the impact that the proposed development will have on the adjacent roads has been carried out. The assessment included Broadlands Road and Bishopswood Road, with assessments taken at its closest position to the site boundary. The maximum displacements expected along the neighbouring highways is approximately 8mm vertically and 10mm horizontally.

5.3. Basement Excavation Criteria

The results of this analysis show that all buildings will fall within the damage classification Category 1: Very Slight if the ground movements caused by the wall installation, excavation and scheme construction are limited to the values presented in Table 5.1 for all walls.

It is noted that the GMA will be supplemented by a project-specific monitoring regime and Action Plan, which will delineate lines of responsibility, trigger levels in accordance with those presented in this GMA and appropriate mitigation measures.

Table 5.1 Cumulative limiting ground movement values at the top of the retention system at various construction stages

Stage	General wall deflection limits	
	Vertical	Horizontal
Contiguous pile wall installation	4.0	4.0
Excavation	23.0	25.0
Long-term	25.0	25.0

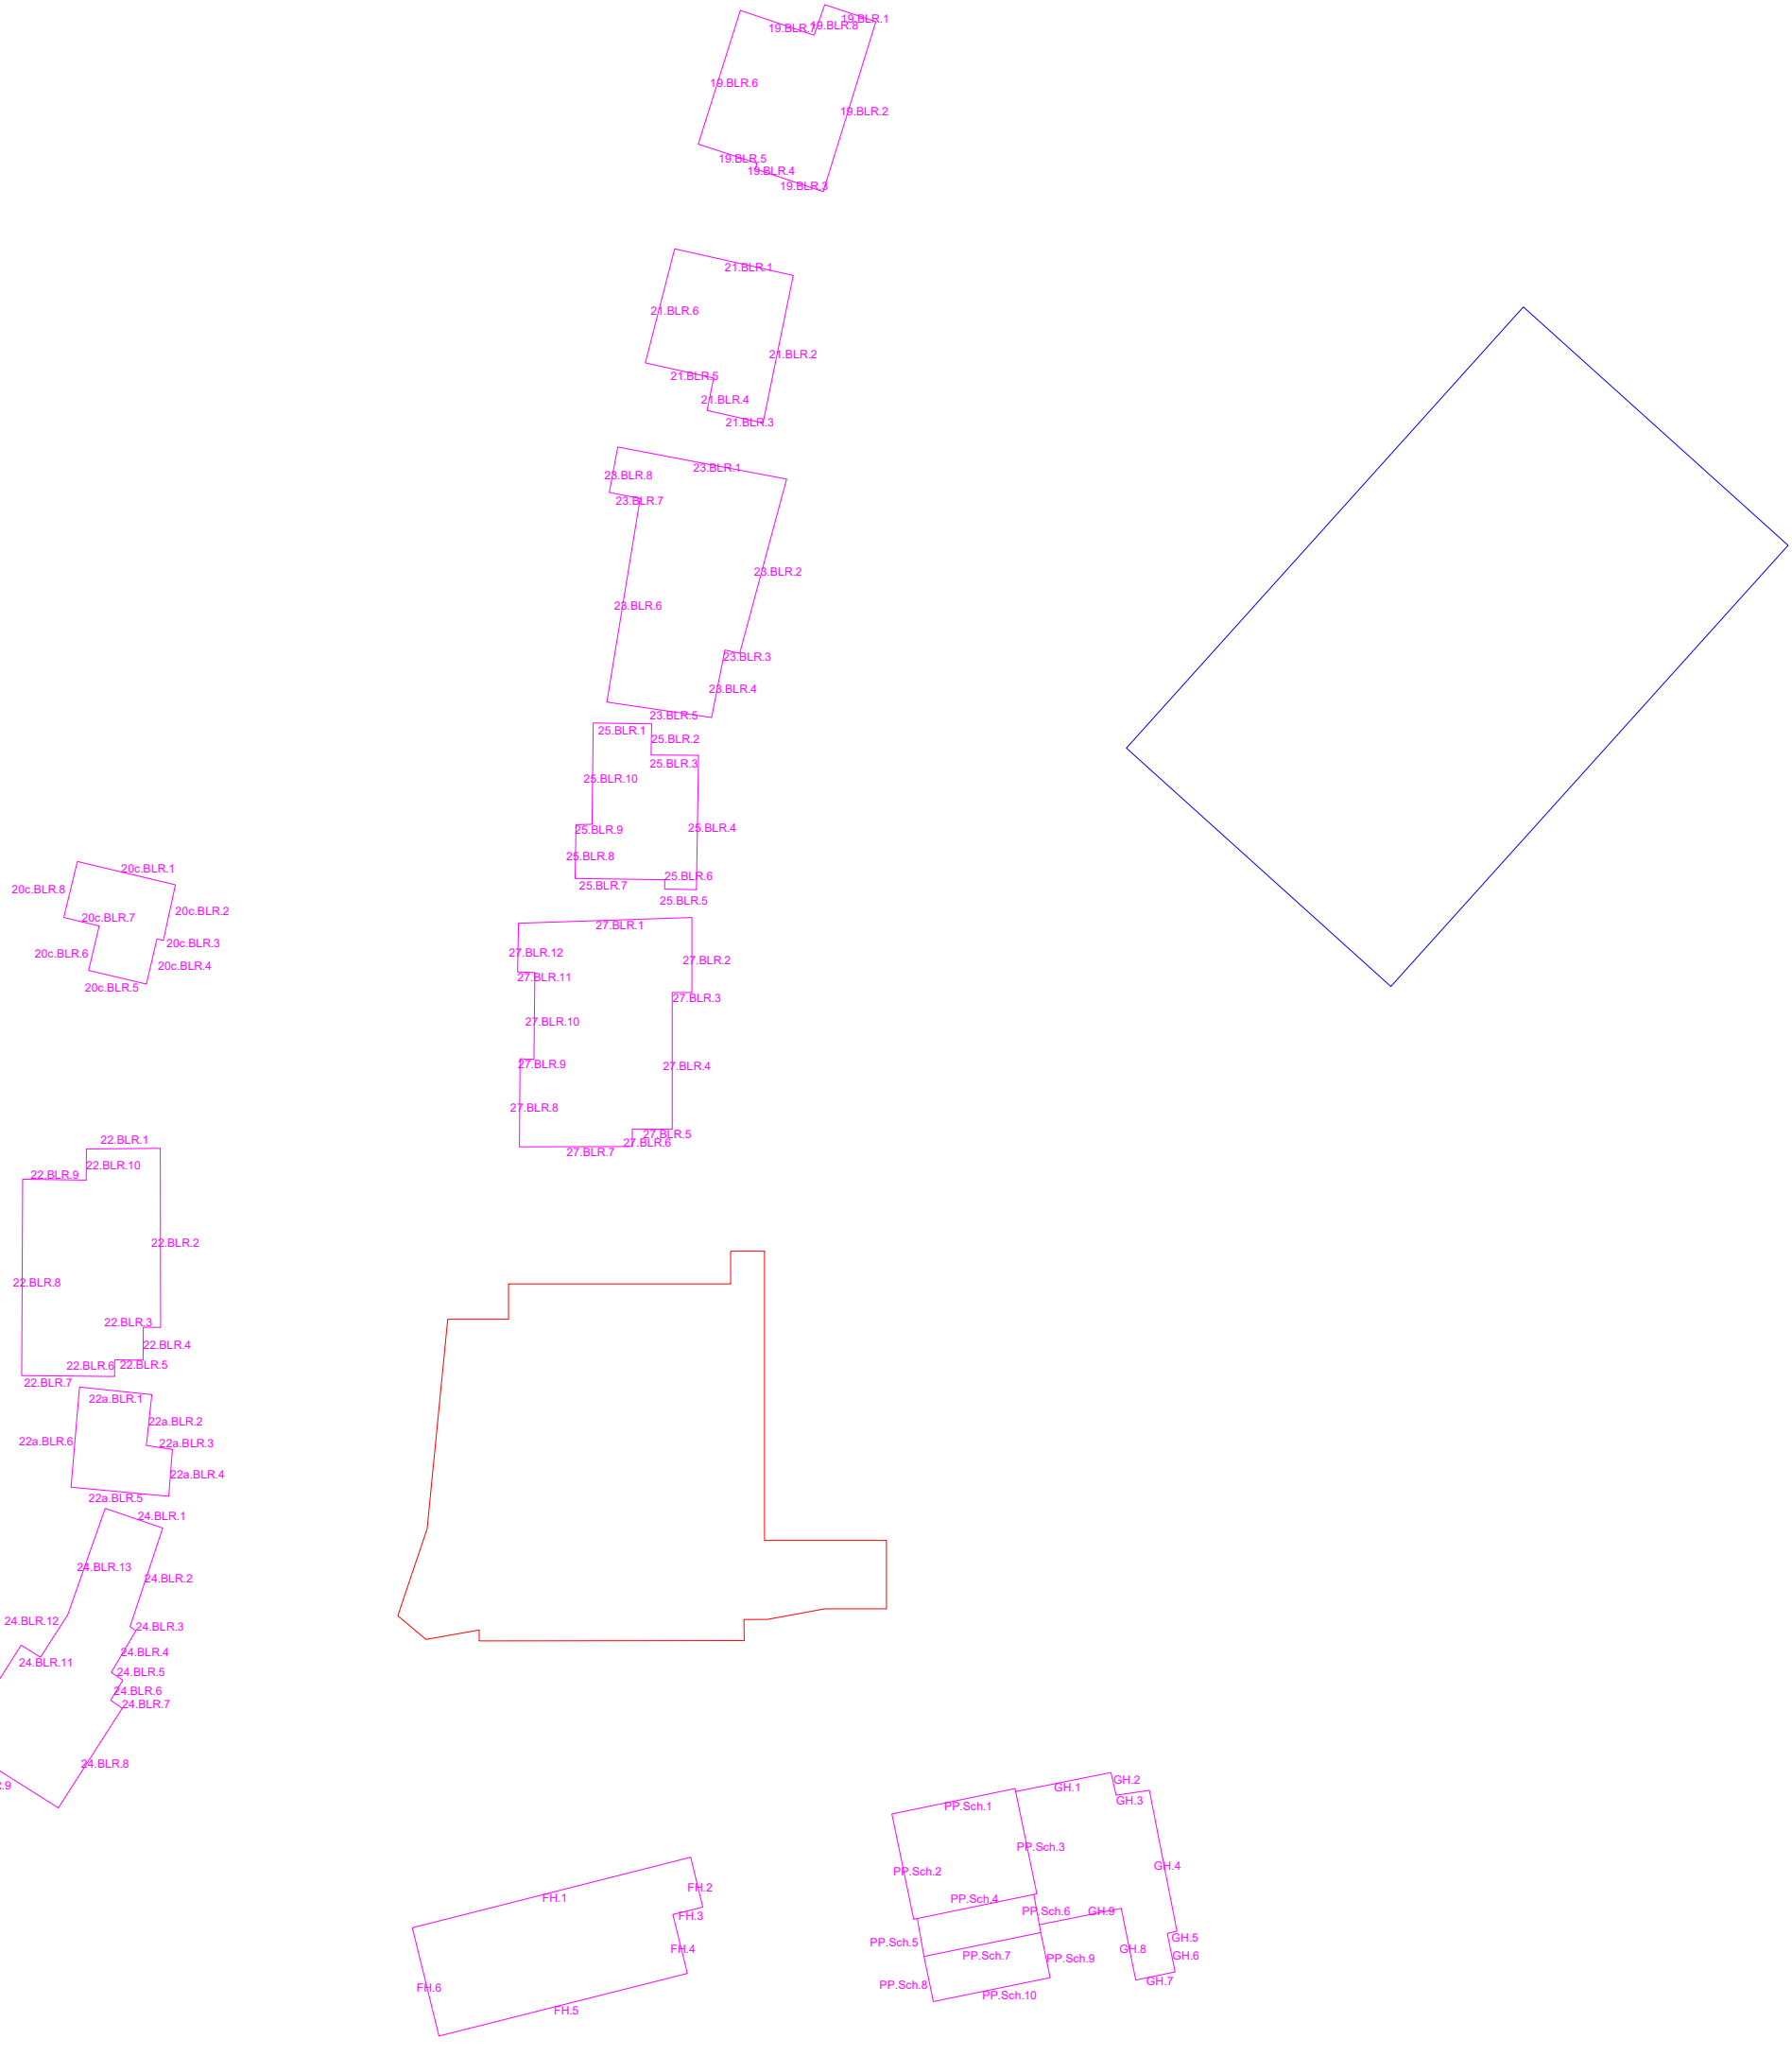
6. Conclusion

The interaction between the proposed Highgate Mallinson Sports Centre development and the neighbouring properties within the zone of influence of the scheme has been reviewed as part of the GMA study presented herein.

The impact of the various stages of construction have been reviewed on the basis of two alternative methods: evaluating the effects of unloading/overburden removal using PDisp; and simulating the excavation induced ground movements using empirical CIRIA curves in XDisp. In the latter case, a retaining wall solution (during the temporary works stage) has been considered, utilising the CIRIA C760 ground movement curves for low stiffness walls in stiff clay.

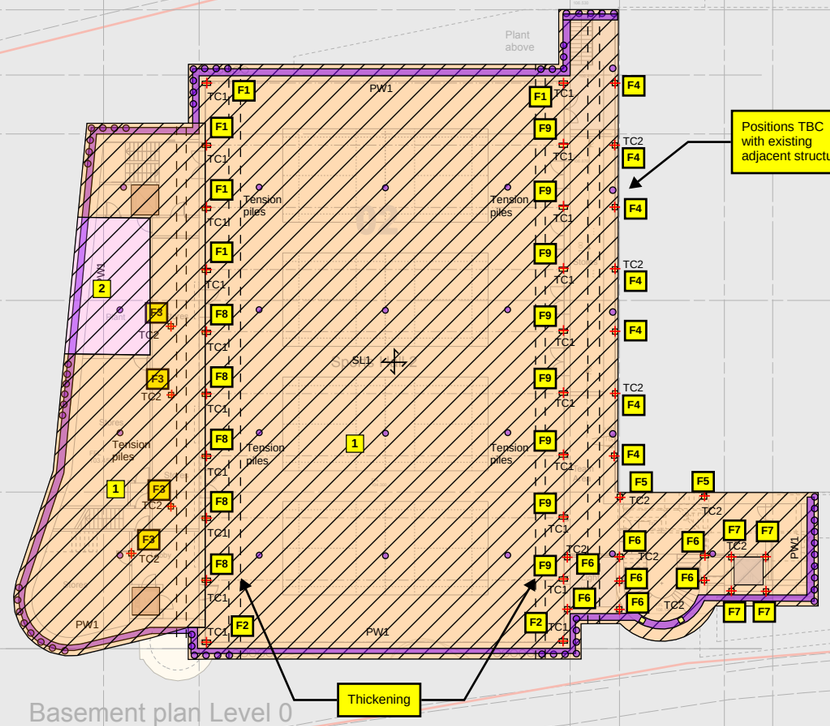
These two different scenarios have been considered in order to bind the potential ground movements arising from excavation operations and building loading (capturing the maximum potential heave, settlement, and lateral movement). This strategy ensures a robust evaluation of potential impact in light of the bespoke, intricate, and workmanship-dependent basement construction methodology. Both short-term (undrained) and long-term (drained) conditions have been assessed by adopting the relevant soil stiffness parameters for each case.

The results from the GMA analyses are presented in Section 5.1 (denoting the evaluated damage categorisation in accordance with the Burland criteria described herein). It is observed that the maximum potential damage classification for the neighbouring properties is Category 1 – Very Slight. The deflections predicted by the GMA should be considered to be the maximum acceptable in order to ensure the Very Slight damage category.



It is noted that the predicted ground movements, the associated wall tensile strains, and the level of damage categorisation are considered to be moderately conservative in view of the relatively cautious data selection and *greenfield* nature of the assessment undertaken.

It is noted that the GMA will be supplemented by a project-specific monitoring regime and Action Plan, which will delineate lines of responsibility, trigger levels in accordance with those presented in this GMA and appropriate mitigation measures. The assessment presented herein is dependent and reliant on the works being undertaken by an experienced contractor, high quality workmanship and appropriate supervision of construction means and methods by experienced personnel.



It is recommended that this report is reviewed and understood in full by the project team and major stakeholders. Where significant changes are made to items such as the construction sequencing, temporary propping arrangements and scheme design, the engineer should thoroughly review the discrepancy and evaluate any potential impacts on ground movement and building damage. If necessary, the building damage categories should be re-evaluated.

It is critical that the permanent and temporary works designs are carried out in a coordinated manner between performance specified elements and substructure contractors, with the aim to ensure that such design elements are in alignment with the assumptions / findings of the GMA and overall design intent.

Loads	Permanent kN	Variable kN
F1 Load	300	250
F2 Load	200	100
F3 Load	375	250
F4 Load	125	75
F5 Load	200	175
F6 Load	250	250
F7 Load	125	75
F8 Load	175	175
F9 Load	225	200

All loads unfactored and rounded up.

Based on preliminary loading allowances as per PJCE Stage 2 report.

All piles shown nominally. Number, spacing & diameter all subject to change following structural / geotechnical design.

Tension piles nominally 300mm diameter. Subject to geotechnical design.
