Hi Valerie,

Below answers have satisfied my raised question and concerns.

The 35% encroachment into T5 Poplar will be affected by the culvert, and T8 and T1 are adjacent to existing foundations.

Regards,

Daniel Monk
Senior Arboricultural Officer (Planning)

Hi Daniel

Please see the responses from the applicants tree consultant below:

- Incursion into the root protection area (RPAs) is significant for trees T1, T5, & T8. However, RPAs are notional, and this has not been offset with the culvert, existing foundations, and hardstand. Does the applicant want to review this and resubmit the figures? **Without further detailed information, we have no evidence on which to base deviation from the notional circles. The anticipated impacts to trees is discussed in detail in the submitted report and is found to be acceptable. However, the report does note that there is likely to be some rooting resistance and as such the impacts assessed are likely to be less than shown.**
- T5 is a hybrid Poplar and the shoot/ root ratio will be affected by being curtailed. **Our tree consultant has confirmed that in their view, topping does not alter the RPA of trees. It should also be noted that the tree is already in decline.**
 - Would photographs of the trees please be forward to review the tree category classification **Please see the following WeTransfer link that includes photos of the trees:**
<https://wetransfer.com/downloads/eac0531a1c95eff806aff81dc0b74de920240408083359/8f147929a3cc9dd5a426276684410e5420240408083421/425d42>
- The Tree Protection Plan drawing shows piling in the southwest corner of the proposal. Can foundation type be confirmed? **The foundation design isn't available at this stage, as it isn't a requirement for the planning application. Some foundation design has been prepared in relation to the foundations close to the culvert, which are set out in the submitted 'Assessment of impact on the Moselle Brook Culvert' report, saved here:**
